Neonatal and Pediatric Medical Supplies

Offering caregivers and their smallest patients a comprehensive combination of products

Caring for Your Smallest Patients
Nutritional Delivery

Kangaroo™ Neonatal and Pediatric Feeding System

- **Kangaroo™ Purple Polyurethane and PVC Feeding Tubes**
  Feeding ports are incompatible with luer lock syringes, reducing the risk of accidental connection. Tubes are polyurethane and DEHP-free PVC with a purple radiopaque stripe and centimeter markings.

- **Kangaroo™ Purple Extension Sets**
  Extension sets are offered in 35” and 60” lengths with both offering a bifurcated option to provide a second port for irrigation and medication delivery, without disconnecting the extension set.

- **Monoject™ Purple Enteral Syringes**
  Oral syringes offered in 1 mL, 3 mL, 6 mL, 10 mL, 12 mL, 35 mL and 60 mL.

**Enteral Feeding Pumps and Feeding Sets**

**Replogle Suction Catheters**

Covidien’s pediatric feeding system offers both engineered safety controls and a visual indicator to help reduce tubing misconnections. The feeding ports on the feeding tubes and extension sets are incompatible with luer lock or IV connections, reducing the risk of an accidental connection or infusion. The stepped connector on the extension set has been enlarged to help prevent connections to IV tubes while still providing a secure fit with our feeding tubes. Lastly, Covidien’s feeding system has been color coded purple to indicate a nutritional port, not for IV access.

Kangaroo™ feeding pumps offer a full spectrum of capabilities including fully programmable feed and flush pumps, ambulatory pumps for patients and parents on the go, and a standard, dependable, easy-to-use pump.

**Kangaroo™ Joey**

Enteral Feeding Pump and Pump Sets

The first hydrating ambulatory enteral device, the Kangaroo™ Joey feeding pump assures clinicians of accurate and reliable function while providing patients with freedom and mobility.

Covidien also offers a complete line of feeding sets featuring our bright purple safe enteral connectors...

...and Argyle™ replogle suction catheters for gastric decompression needs.

Wound Care

Trusted Pediatric Wound Care

Covidien Wound Care Products represent over a century of quality and innovation, trusted by healthcare providers around the world. We earn this trust through innovative manufacturing processes and rigorous quality standards, resulting in consistently reliable products essential for your smallest patients. Covidien is also proud to maintain US manufacturing facilities and embraces the value of supporting jobs at home.

Adequate vascular access in the neonate is of primary concern. Vascular access provides a means of infusing critical fluids including nutrition and medication. Covidien’s Argyle™ brand of products such as umbilical vessel catheters, peripherally inserted central catheters and insertion trays have led the market for many years. Our products are manufactured of the highest quality to support the needs of our tiniest patients.

Covidien offers thoracentesis, paracentesis and pneumothorax systems featuring the Turkel™ safety needle. This unique device utilizes a color change indicator in the needle hub to provide direct visualization of the cannula. This helps to prevent penetration of underlying organs. Additionally we offer lumbar puncture trays for both the pediatric and neonatal population. A sternal-iliac needle is also available for aspiration or intraosseous infusion.

Diagnostic Products
