**SCANNING TECHNIQUES**

**Situate™ Detection System X**

---

**Situate™ Body Scanner Lite**

**Situate™ Room Scanner**

**Situate™ Extremity Scanner**

---

**RECOMMENDED SCAN TECHNIQUE:**

- The scanning procedure includes a vertical and horizontal scan pattern.
- Using the draped Room Scanner, scan low and slow within 2" of the body, following the contour of the patient’s body.
- One wand scan pattern will take between 15–20 seconds, at the rate of at least 3 seconds per pass.
- Typical wand scan takes 30–40 seconds.

---

**TORSO**

**OR ENVIRONMENT**

---

**TORSO OR ENVIRONMENT**

**RECOMMENDED SCAN TECHNIQUE:**

- Position the draped extremity scanner within 1" of the area of interest.
- Orient the extremity scanner to ensure maximum coverage of the area of interest.
- Hold extremity scanner steady for the duration of the scan (16 seconds).
