A trocar. A closure system. An all-in-one device.¹

Introducing the VersaOne™ fascial closure system. It’s a unique all-in-one¹ solution that serves as a trocar and a fascial closure device to deliver:

- Consistent port-site closure¹
- Added procedural efficiency¹,†
- Ease of use¹

¹ Compared to the competitive closure device, suture passers, and hand sutures.
ACCESS AND CLOSURE.
WITH A SINGLE DEVICE.

The VersaOne™ fascial closure system is an all-in-one device that brings consistency to laparoscopic closures. It also:

- Eliminates the need to remove the trocar before closing
- Makes reinsufflation unnecessary — pneumoperitoneum can be maintained throughout the procedure
- Allows tissue layers to remain aligned

Consistent Closure and Suture Placement

The needle tip and grasping features of the suture passer allow for subcutaneous insertion and grasping of the suture.

The proximal black line indicates correct closure placement when it is no longer visible above the skin.

The cannula window and guide help facilitate closure of the fascia at 5 mm on either side of the cannula defect.

The black arrow indicates where the suture passer will exit the cannula window.

The trocar guide directs the suture passer to the cannula window. When the distal black line is aligned with the peritoneum, consistent suture placement can be achieved.

The low-profile ergonomic obturator is available in an optical or bladed tip.
Fascial closure techniques such as hand suturing, suture passers, and closure devices can be inconsistent.\(^7,8\)

We developed the VersaOne™ fascial closure system to bring consistency to closures at the port site.\(^1\)
