HMS Plus
HEMOSTASIS MANAGEMENT SYSTEM

Believing in the technology... investing in the future
Ordering Information

HMS Plus Test Cartridges and Liquid Controls
Disposable cartridges undergo strict manufacturing standards and quality control to provide accurate, dependable performance. Cartridge room temperature and/or refrigerated shelf life are stamped on each box.

Heparin Assay Cartridges and Controls

Medtronic, the world’s leading medical technology company and a key participant in blood management for more than a decade, introduces new features on the HMS Plus Hemostasis Management System that provide improved ease of use. The HMS Plus System is a reliable and versatile platform used to perform multiple tests for anticoagulation management.

Manufactured by Medtronic, the HMS Plus System combines a trusted standard in precise clot-detection technology with state-of-the-art user enhancements such as: bar code scanner, external data management program and connectivity-ready capabilities.

“Versatility makes HMS PLUS an effective tool for diverse patient management.”

---

### HMS Plus

**Hemostasis Management System**

### Why is Hemostasis Management Important for Your Patients?

- Assist in prevention of thrombus formation
- Help preserve clotting factors
- Monitor multiple aspects of anticoagulation

The HMS Plus technology was created with the recognition that the activated clotting time (ACT) is a global or functional test that measures the effect of many variables including:

- Medications
- Heparin anticoagulation
- Temperature
- Dilution

Measuring the ACT, or the degree of anticoagulation, is not always an indication of adequate heparinization or whether an appropriate antithrombotic state has been achieved.

Hemostasis management is achieved with the HMS Plus System and is well suited for use in the operating room, during ECMO, and when Point-of-Care heparin testing is important to successful medical treatment.

---

### Optimized patient treatment using the HMS Plus System includes:

Benefits of the HMS Plus System

Benefits of Improved Hemostasis Management

- Fewer complications associated with excessive blood loss.¹
- Preservation of the coagulation system, resulting in fewer transfusions.²
- Fewer surgical reoperations,³ thus decreasing associated costs.

“Compared with heparin management with the activated clotting time, heparin concentration-based anticoagulation management during CPB leads to a significant reduction of thrombin generation, fibrinolysis and neutrophil activations, whereas there is no difference on platelet activation.”⁴

“Retrospective data revealed a marked reduction in the re-exploration rate and post-operative hemorrhage after the introduction of the Hepcon HMS.”⁴

Quantitative Heparin Measurement Versus Activated Clotting Times²

n=254 patients

Maintenance of patient-specific heparin concentrations, based on heparin concentration measurement during cardiopulmonary bypass led to greater heparin doses and lower doses of protamine relative to heparin dose. Patients in the interventional group received significantly fewer platelets, plasma and cryoprecipitate during the perioperative interval. Patients in the control group required increased hemostatic transfusion during the perioperative period and also required longer closure times.¹

Heparin Concentration Versus Activated Clotting Times

Illustrates the lack of correlation between heparin concentration and ACT during cardiopulmonary bypass.

Heparin Dose Response (HDR) Test

HMS Plus in vitro heparin dose response uses a baseline and two concentrations of heparin to project individual responses to heparin and determine the appropriate heparin dose for each patient.

“Of particular concern is the fact that the ACT has previously been shown to correlate poorly with plasma heparin levels during CPB.”⁵

“With typical use of the ACT, the user may obtain values up to 3 times appropriate for the plasma heparin concentration. Potential consequences of this overestimation include the possibility of inadequate intraoperative anticoagulation by heparin, and vastly excessive delivery of protamine, resulting in increased post-operative bleeding.”⁶
**Improved Efficiency and Ease of Use**

The HMS Plus System dispenses the appropriate volume of blood or control material into each cartridge channel.

**Bar Code Scanner**
- Saves time by making cartridge and control lot numbers and expiration dates easy to enter
- Efficient entry of patient and user ID

**Version 4.0 Software**
- Improvements to the user interface allow for more efficient navigation through the menus
- Easy storage and retrieval of results
- Helps maintain the security of patient information and data

**Data and QC Management**
- Supports the latest requirements for POC testing equipment
- Stores up to 200 patient and 100 QC records
- Offers QC and user lockout options
- Allows purge function of all test records
- Connectivity ready

"Importantly, the limits of agreement between measures are very tight at low heparin concentrations, when it is critical not to incorrectly assume adequate anticoagulation. This level of agreement, in conjunction with other beneficial features, such as the rapid turnaround time for results, individualized heparin-dosing protocols and more accurate protamine dosing, makes the Hepcon (HMS) a useful tool in the monitoring of anticoagulation during CPB."  

**Quality Control**

Lyophilized controls are available to verify instrument and cartridge function and to meet regulatory guidelines for testing.

The HEPtrac™ Electronic Quality Control provides a multi-level quality check to make quality control easier and faster to perform.

"The rapid disappearance of heparin from the circulation may in part be due to distribution to another body compartment and also possibly to heparin binding to the artificial surfaces. This decline in heparin levels was not detected by either ACT technique… the Hepcon (HMS) dropped accordingly."  

**External Data Management (EDM)**
- Stand alone software
- Easier download of data
- Documentation for billing and reimbursement
- QC and patient data management including preformatted reports

"The rapid disappearance of heparin from the circulation may in part be due to distribution to another body compartment and also possibly to heparin binding to the artificial surfaces. This decline in heparin levels was not detected by either ACT technique… the Hepcon (HMS) dropped accordingly."
Support Information

Customer Support
Medtronic is proud of our commitment to customer-focused quality. We have dedicated team members in sales, product services and technical support to assist you and help you identify your product needs.

Customer Service
For ordering information on instruments, test cartridges and controls, contact your Customer Service Representative or your local Medtronic Product Sales Representative.

CardioVascular Service
Field-based service representatives provide on-site instrument service for routine maintenance and ongoing support. Annual service contracts are available. To contact your local Field Service Representative, call 800-433-4311.

Technical or Regulatory Information
For questions on the use of our products or on hospital and laboratory regulations regarding their use, call 800-328-3320.

Caution:
Federal law (USA) restricts this device to sale by or on the order of a physician.

For more information contact your local Medtronic Sales Representative or call Customer Service toll-free at 1-800-328-1357.

Warnings: Proper Instrument and Cartridge Use
The HMS Plus instrument and cartridges must only be used in the manner and purpose for which they are intended. Instructions for proper use are included in the manual and in the cartridge package inserts. Read all warnings, precautions and Instructions for Use carefully prior to use.

System Specifications

Physical Dimensions:
Height: 40 cm (15.75") Depth: 38 cm (15.0")
Width: 33 cm (13.0") Weight: 15.47 kg (34.1 lbs.)
Serial Data Port: 19200 baud, 8 data bits, 1 stop bit, no parity

Environmental:
• Operating temperature: 14°C to 32°C (57°F to 90°F)
• Storage temperature: 0°C to 49°C (32°F to 120°F)
• Operating humidity: 10% to 90%, noncondensing
• Storage humidity: 5% to 90%, noncondensing

Power:
• Voltage: 100 - 240 V~ Single Phase
• Frequency: 50 - 60 Hz
• Maximum current: 1.2/0.6 A (100 - 120/200 - 240)
