Patient / Caregiver Emergency Information on reverse
PATIENT / CAREGIVER EMERGENCY INFORMATION

Prialt

Medication: Prialt (non-opioid ziconotide) for pain management delivered from an implanted pump through a catheter placed in the fluid that surrounds my spinal cord.

Symptoms of Overdose:
- Nausea and vomiting
- Change in mental status (confusion, decreased consciousness, disorientation)
- Change in mood (such as increased depression or thoughts of suicide)
- Symptoms of changes in perception (hearing voices or seeing visions)

If symptoms appear: Seek emergency attention immediately.

For emergency responders: Have emergency physician contact managing physician (information on reverse).

Prialt is a registered trademark of Azur Pharma International Limited 1.
