Instructions to Review Event Logs on the 8840 Clinician Programmer
SynchroMed® II Infusion Systems

The Event Log records conditions in the pump and is used to:

- Log system data
- Diagnose pump status
- Alert or call attention

The following excerpt from the Model 8840/8870 N’Vision Programming Guide for SynchroMed® II infusion systems explains how to review event logs.

**To view event logs**

1. Select the TOOL KIT screen tab ( ).
2. Select the EVENT LOG sub tab ( ).
3. If event logs have not been read from the pump during the current programming session, position the programming head over the pump, then select the GET LOGS button (Figure 56).
4. Select the events to be viewed from the Event Log Filter drop-down list (Figure 56).

**Note:** Event Logs can also be printed by selecting the PRINTER button ( ) on the title bar, then selecting the Logs option to create a Print report.
