# Medtronic

Getting started

INVOS™ 7100 regional oximetry monitor
Adult and pediatric quick start guide

1

Power on
Press **Power** button on the top right of the tablet.

2

Connect preamplifier
Plug up to two preamplifiers into the dock on the back panel of monitor.

3

Attach sensor cable
Connect up to two non-disposable RSC cables to the preamplifier.

4

Apply sensor
Place up to four sensors on the patient; then connect the non-disposable RSC cables to the sensors.
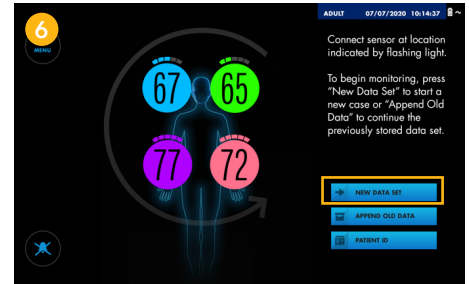

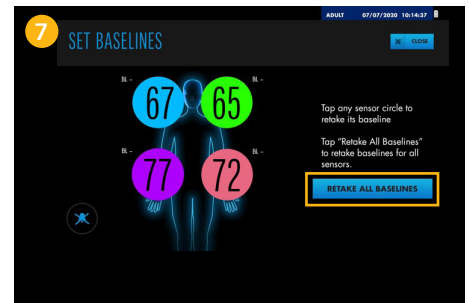

Adult sensors   Pediatric sensors

5

Check sensor placement
Look for the blue light on the cable to confirm cable and sensor are properly placed. From this screen you can drag the sensor location to match where the sensors were placed on the patient by pressing and holding the white circles.

6

Start monitoring
Once sensor readings appear on screen, press **New Data Set** button to continue.

7

Set a baseline
Tap **Menu** icon on the top left to locate **Set Baselines** button; select this option to set a baseline immediately. Then select **Retake All Baselines**.
