Commonly Used Modifiers:

- Q0 (zero): Denotes primary prevention patient for Medicare ICD device implants
- 22: Increased procedural services (may need to submit a report)**
- 25: Significant, separately identifiable E & M service by same physician on the same day of the procedure**
- 26: Professional component**
- 51: Multiple procedures rendered at the same operative session (payer dependent)**
- 52: Reduced services**
- 53: Discontinued procedure**
- 78: Unplanned return to the OR/procedure room by same physician during the postoperative period**
- 79: Unrelated procedure or service by the same physician during the postoperative period**

NOTES:

Codes indicated with a + symbol in front of them are "add-on" codes; bill in addition to the primary service/procedure.

TC: Technical Component; PC: Professional Component

* Service performed in a facility setting (i.e., hospital) may require a -26 modifier that represents professional component only.
