Cannula

Obturator

Reusable Suture Passer

*13 out of 16 surgeons surveyed agreed
Step 1
Remove the seal housing on the cannula by rotating the self-adjusting seal counter-clockwise while depressing the specimen removal button.

Important: Do not insert the guide into the seal housing.

Step 2
Fully insert the disposable guide into the cannula until a click is heard and the guide is locked in place.

Step 3
Ensure the distal black band on the cannula is aligned with the peritoneum and the proximal black band is below the skin.
Step 4
Grasp a short tail of suture with the suture passer.†

[Image 3] The trocar and guide will accommodate Karl Storz™ BERCI fascial closure instrument.††

Step 5
A. Insert the suture passer down either one of the two guide channels. Advance the suture passer and suture through the tissue and into the abdominal cavity.
B. Use the secondary grasper from the alternate port to grasp the suture. Release the suture from the suture passer jaw.

Step 6
A. Insert the empty suture passer down the opposite guide channel into the abdominal cavity to grab the suture.
B. Pick up the suture and remove it through the guide.
C. Remove the cannula and guide assembly from defect and tie off.
