LEARN THE BENEFITS OF MINIMALLY INVASIVE GYNECOLOGIC SURGERY

**Total Laparoscopic Hysterectomy**
Versus Open Hysterectomy

- **Spend** **3.8 FEWER DAYS** in the hospital²⁻⁵
- **Lose nearly 50% LESS blood**¹⁻⁵
- **Be 3X LESS LIKELY TO BE ON OPIOIDS** five days after surgery²
- **Return to normal activities** **13.63 DAYS SOONER**⁷
- **SAVE $2,268 in postoperative costs**⁶

**Operative Hysteroscopy:**
**Mechanical Tissue Removal**
Versus **Blind D&C**

- **2% OF LESIONS REMAIN**
  After a procedure with the TruClear™ system, whole or part of the lesion remained in situ in only 2% of patients, in a randomized controlled trial.⁸
- **87% OF LESIONS REMAIN**
  After a Blind D&C, whole or part of the lesion remained in situ in 87% of patients, in a study of post-menopausal women.⁹

- **Associated with a lower rate of intrauterine adhesions** than a metal curette¹⁰
- **Aligns with ACOG guidance:** Hysteroscopy is recommended with directed D&C to include any discrete lesions as well as the background endometrium¹¹

**Our therapies improve the lives of more than 2 people every second.**

- **62 Million+ lives improved**
- **~80 percent of the surgeons who’ve attended our training programs adopt or incorporate more minimally invasive procedures into their practices.†**
