GENTLE. SIMPLE. EFFICIENT.¹,²

HET™ bipolar system

A patient-friendly treatment for symptomatic grades I and II internal hemorrhoids
We are committed to improving patient outcomes, providing better treatment options, and helping you deliver better care.

Our HET™ bipolar system not only makes sense for patients wanting relief, it also makes economic sense for you. It adapts to standard bipolar generators, eliminating the need for an additional capital purchase.

**The HET™ Bipolar System**

With a design that allows treatment in one procedure, the HET™ bipolar system is a non-surgical treatment for symptomatic grades I and II internal hemorrhoids.\(^1,2\)

The simple, gentle, and efficient treatment targets the area above the dentate line, delivering constant tissue compression at a low temperature to help minimize muscular damage.\(^3\) Hemorrhoid Energy Therapy, using the HET™ bipolar system can be completed quickly with minimal pain to the patient.\(^1,2\)

**Gentle**
- Constant compression\(^3\)
- Minimal pain to the patient\(^2\)

**Simple**
- Non-surgical technique
- Quick and easy to use
- May require only light sedation

**Efficient**
- Treatment of all internal grades I and II hemorrhoids in one procedure.\(^1,2\)
- Low treatment temperature and constant compression shown to minimize collateral muscular damage.\(^3\)

**Treatment Results**

Below is a representation of results from one session treating several large internal, symptomatic grade I hemorrhoids.

*Demonstrated in an in-vivo study*
Risk information: Potential complications include anal discomfort, pain, bleeding, perforation, tissue damage, burns, and infection. Physician and clinical staff must have adequate training and experience with electrosurgery to prevent serious injury, inadvertent tissue damage, or complications. Caution should be exercised in patients with an increased risk of bleeding, whether by medication or other disease states. See instruction manual for a complete list of risks.
