The Signia™ stapler provides real-time feedback when used with all Tri-Staple™ reloads. That means you get valuable information to help you make informed decisions — and much more.

Here are just a few examples of what real-time feedback can bring to your procedures.

- **A gauge that measures forces during firing** — and tells you when it's slowing down to optimize staple formation in challenging applications.

- **Visual cues that show forces on tissue during clamp and correlate to the tactile feedback of a manual stapler.** This can help you assess load selection.

- **Battery and system status, fire-ready indicators, and more**

- **A built-in user’s guide for simplified setup**
