HOSPITAL INPATIENT PROCEDURE CODING FOR GENERAL SURGERY

ICD-10-PCS procedure codes¹ are used by hospitals to report surgeries and procedures performed in the inpatient setting.

All ICD-10-PCS codes have seven digits, each digit representing a specific character associated with procedures. Code assignment in ICD-10-PCS is a process of “constructing” the code by selecting values from a code table for each of the seven standard characters. Key characters are discussed below.

CHARACTER	DESCRIPTION
3: Root Operation	<p>The two main root operations for removal of tissue are B-Excision and T-Resection. By definition, B-Excision involves removing a portion of the body part and T-Resection involves removing the entire body part.² For example, removal of a portion of the stomach is coded to B-Excision and removal of the entire stomach is coded to T-Resection.</p> <p>Note that physicians may use these terms more variably. It is the coder’s responsibility to determine what the physician’s documentation equates to in terms of ICD-10-PCS definitions. The physician is not expected to document using ICD-10-PCS code descriptions.²</p> <p>It should also be noted that procedural steps necessary to close an operative site, including end-to-end or side-to-side anastomosis, are not coded separately. For example, in a resection of the distal esophagus with anastomosis of the remaining esophagus to the stomach, the anastomosis is considered inherent and is not coded.²</p>
5: Approach	<p>Different codes are constructed depending on the approach:</p> <ul style="list-style-type: none">0-Open involves an open incision to directly expose the surgical site4-Percutaneous Endoscopic is used for procedures performed via laparoscopy or thoracoscopy

Note that fundoplication for associated GERD is coded separately as below.	
> WITH IMPLANTATION OF MESH	
Character 3 is the root operation. When mesh is used to affect the repair, the root operation is U-Supplement because U-Supplement is defined as putting on or in material, such as mesh, that physically reinforces a body part. ² The codes are then further differentiated by the type of mesh.	
OBUR07Z	Supplement right diaphragm with autologous tissue substitute, open approach
OBUR0JZ	Supplement right diaphragm with synthetic substitute, open approach
OBUR0KZ	Supplement right diaphragm with nonautologous tissue substitute, open approach
OBUS07Z	Supplement left diaphragm with autologous tissue substitute, open approach

OBUS4JZ	Supplement left diaphragm with synthetic substitute, percutaneous endoscopic approach
OBUS4KZ	Supplement left diaphragm with nonautologous tissue substitute, percutaneous endoscopic approach
> WITHOUT IMPLANTATION OF MESH	
Character 3 is the root operation. When mesh is not used to affect the repair, the root operation is Q-Repair. This root operation is a default.	
OBQR0ZZ	Repair right diaphragm, open approach
OBQRS0ZZ	Repair left diaphragm, open approach
OBQR4ZZ	Repair right diaphragm, percutaneous endoscopic approach
OBQRS4ZZ	Repair left diaphragm, percutaneous endoscopic approach
FUNDOPLICATION (EG, FOR GERD)	
Character 3 is the root operation. For fundoplication, the root operation is V-Restriction because V-Restriction is defined as partially closing a lumen. ²

LYMPH NODE PROCEDURES	
Character 3 is the root operation. For lymph nodes, root operation B-Excision is used for partial removal of a lymph chain, including removal of a single node or sampling selected nodes within a chain. When an entire chain of lymph nodes is removed, including radical resection, root operation T-Resection is used.	
Character 7 is the qualifier, which adds further information to the code. Qualifier X-Diagnostic is used when the intent is to biopsy the lymph nodes, as is typically the case for biopsy, sampling and other partial removal. Qualifier Z-No Qualifier is used when the intent is therapeutic or when the entire lymph chain is removed.

The payment rate shown is the standardized amounts for facilities with a wage index greater than one. The average standard amounts shown also assume facilities receive the full quality update. The payment will also be adjusted by the Wage Index for specific geographic locality. Therefore, payment for a specific hospital will vary from the stated Medicare national average payment levels shown.

HOSPITAL INPATIENT DRGS FOR GENERAL SURGERY

DRG Assignment FY2020—effective October 1, 2019

Under Medicare's MS-DRG methodology for hospital inpatient payment, each inpatient stay is assigned to one of about 750 diagnosis-related groups, based on the ICD-10 codes assigned to the diagnoses and procedures. Each MS-DRG has a relative weight that is then converted to a flat payment amount. Implanted devices are typically included in the flat payment and are not paid separately. Only one MS-DRG is assigned for each inpatient stay, regardless of the number of procedures performed. MS-DRGs shown are those typically assigned to the following scenarios when the patient is admitted specifically for the procedure.

W MCC in MS-DRG titles refer to the secondary diagnosis codes that are designated as major complications or comorbidities. MS-DRGs have at least one major secondary complication or comorbidity. Similarly, W CC in MS-DRG titles refer to secondary diagnosis codes designated as other (non-major) complications or comorbidities. MS-DRGs WO CC/MCCs have no secondary diagnoses that are designated as complications or comorbidities, major or otherwise. Note that some secondary diagnoses are only designated as CCs or MCCs when the conditions were present on admission, and do not count as CCs or MCCs when the conditions are acquired during the stay.

In addition, Post-Acute Care Transfer (PACT) status refers to selected DRGs in which payment to the hospital may be reduced when the patient is discharged by being transferred out. The DRGs impacted are those marked "Yes" and the patient must be transferred out before the geometric mean length of stay to certain post-acute care providers, including rehabilitation hospitals, long term care hospitals, skilled nursing facilities, or to home under the care of a home health agency. When these conditions are met, the DRG payment is converted to a per diem and payment is made as double the per diem rate for the first day plus the per diem rate for each remaining day up to the full DRG payment.
