For ten years, Solitaire™ Revascularization Device has supported you in helping your patients with a better chance of recovery.

Now we’ve advanced our design for optimized delivery and ease of use. While retaining the clinically proven features you’ve come to depend on. At Medtronic, we listen. We innovate. We meet your needs.

At Medtronic, we listen. We innovate. We meet your needs.

TEN YEARS OF INNOVATION

CAUTION: Federal (USA) law restricts these devices to sale, distribution, and use by or on order of a physician. Indications, contraindications, warnings, and instructions for use for Solitaire™ X Revascularization Device can be viewed at www.medtronic.com/manuals. Indications, contraindications, warnings and instructions for all other products can be found in the product labeling supplied with each device.

Phenom™ Catheters are intended for the introduction of interventional devices and infusion of diagnostic or therapeutic agents into the neuro, peripheral, and coronary vasculatures.

The React™ 68 Catheter and React™ 71 Catheter are indicated for the introduction of interventional devices into the peripheral and neuro vasculature.

The Riptide™ Aspiration System is intended for use in the revascularization of patients with acute ischemic stroke secondary to intracranial large vessel occlusive disease (within the internal carotid, middle cerebral M1 and M2 segments, basilar, and vertebral arteries) within 8 hours of symptom onset. Patients who are ineligible for intravenous tissue plasminogen activator (IV t-PA) or who fail IV t-PA therapy are candidates for treatment.

47% LOWER DELIVERY FORCE IN A .021" MICROCATHER \(\text{^3}\)

MORE TIME FOR OPPORTUNITY. MORE OPTIONS TO TREAT.

The Solitaire™ X Revascularization Device is now indicated for treatment of large vessel occlusions from ICA to M1 within 6-16 hrs after symptom onset. The indication expansion is based on a post-hoc analysis of the DEFUSE 3 study in which Solitaire™ was one of the endovascular therapy devices studied.

MORE OPTIONS. BETTER CONTROL.

The Solitaire™ X Revascularization Device’s expanded compatibility gives you the flexibility to employ the optimal technology for each procedure.\(^3\)

LOWER PROFILE. GREATER FLEXIBILITY.

When combined with a 0.021" microcatheter, the Solitaire™ X Revascularization Device provides smooth and adaptable deliverability with a lower clot crossing profile.

DELIVERABILITY WITH A 0.021" MICROCATHER 

The Solitaire™ X Revascularization Device enables reliable and effective use in vessels as small as 2.0mm so you can confidently treat distal occlusions out to M2.

LOWER DELIVERY FORCE.\(^1,3\)

Optimized delivery produces lower delivery force for improved procedural efficiency and smooth navigation through even the most complicated anatomy.

MORE TIME FOR OPPORTUNITY. MORE OPTIONS TO TREAT.
