Managing the care of complex patients at home can be a challenge. Some patients need ongoing, focused attention on just one primary condition, while others have co-morbidities that may need concurrent care. In fact, it was recently reported that three out of four adults age 65 and older have two or more chronic conditions, and more than 70% of all health care spending in the United States goes toward treating this population.

Committed to helping you improve the care of these patients, Medtronic Care Management Services (MCMS) proudly offers more than 20 primary and secondary programs that include biometric and symptom monitoring, self-care guidance and education. Each program is designed to remotely monitor patients and gather condition-specific information to enable clinicians to manage the care of these complex, co-morbid populations, and determine possible interventions to optimize their plan of care.

MCMS is committed to regularly expanding its list of telehealth program offerings to help you manage broader patient populations. Current MCMS programs include:

**CONDITIONS:**
- Asthma
- CAD
- CKD
- COPD
- Diabetes
- ESRD
- Heart failure
- Hypertension
