

HOW THE RESPIRATORY INFECTIOUS DISEASE HEALTH CHECK WORKS*

The Respiratory Infectious Disease Health Check helps patients who are at the highest risk of complications or mortality associated with COVID-19 track their respiratory symptoms and body temperature through daily health checks.

1

Patients exposed to or displaying symptoms of COVID-19 are enrolled in the Respiratory Infectious Disease Health Check.

2

Patients are provided questions to answer daily using Medtronic Care Management Services patient engagement technology platforms.

3

Symptom and temperature readings are captured and aggregated in our Omnivisor® Pro clinical monitoring software.

4

If the patient's condition begins to change, the care team is alerted so they can determine the appropriate intervention.

5

The care team will monitor data during the patient's enrollment in the program. The patient completes the program once cleared by a healthcare provider.

*Respiratory Infectious Disease Health Check solution works with current customer care coordination and care management programs
