I am receiving ITB Therapy™ with medication, Lioresal® Intrathecal (baclofen injection). It reduces my severe spasticity. The medication is delivered from an implanted pump through a catheter placed in the fluid that surrounds my spinal cord. The pump is metal and may set off metal detection alarm systems.

**Signs of Overdose:**
Symptoms may appear suddenly or gradually
- Drowsiness
- Dizziness/lightheadedness
- Slow and shallow breaths
- Seizures
- Loss of consciousness
- Hypothermia (lower than normal body temperature)

**Signs of Withdrawal:**
- Increased spastic or stiff muscles
- Itching
- Low blood pressure
- Changed mental status
- In rare cases, has advanced to rhabdomyolysis, multiple organ-system failure and death
- Tingling sensation
- High fever

Actions if symptoms of overdose or withdrawal appear:

- Seek emergency medical attention immediately.
- Rapid, accurate diagnosis and treatment in an emergency room are important to prevent potential life-threatening effects of intrathecal baclofen withdrawal.
- If necessary, perform cardiopulmonary resuscitation (CPR).
- Give the enclosed Emergency Procedure Card for Lioresal® Intrathecal (baclofen injection) to the nearest ER doctor.
- If the Emergency Procedure Card is not available, call Medtronic, Inc. Technical Services at 800-707-0933.
- Have the ER doctor call my doctor:
