PRODUCT PERFORMANCE REPORT

SUMMARY OF DATA FROM THE MEDTRONIC POST-MARKET REGISTRY

2024

Medtronic
Further, Together

Contents

1 Overview

1.1 Registry Background

Medtronic uses a prospective, long-term multi-center registry to monitor the performance of certain products at selected centers titled the Product Surveillance Registry (PSR). This registry was initially created by Medtronic to monitor the performance of commercially available targeted drug delivery (TDD) and spinal cord stimulation (SCS) systems. Later on, deep brain stimulation (DBS) and sacral neuromodulation (SNM) were added to the registry. This 2024 Product Performance Report (PPR) provides data on the devices followed in the registry. Medtronic also incorporates the findings of Returned Product Analysis (RPA) for devices followed in the registry that are returned to Medtronic.

Depending upon geography, this report may contain information outside approved labeling for the Medtronic commercially available devices. It is recognized that healthcare providers prescribe approved therapies to meet specific patient needs; however, Medtronic only directs the use of its products according to geography-specific, approved labeling.

The registry has collected data from centers across North America, Europe, South America, and Asia. There have been 77centers that have contributed data for TDD systems, 87 centers for SCS systems, 66 centers for DBS systems, and 24 centers for SNM systems. Each registry center received Institutional Review Board or Medical Ethics Committee approval of the registry protocol and associated Informed Consent Forms (ICF). Registry patients signed an ICF prior to enrollment. Each registry center followed its standard clinical practice for device system implantation including patient selection, implant methods, and post-implant therapy management. Centers were activated after receipt of the necessary documentation, completion of training, and approval to access the web-based registry system.

1.2 Commitment to Quality

The Medtronic commitment to quality has long been stated in our Mission, "To strive without reserve for the greatest possible reliability and quality in our products; to be the unsurpassed standard of comparison and to be recognized as a company of dedication, honesty, integrity, and service."

In line with this commitment, we remain focused on sharing information and appropriate updates with customers on a regular basis. Thus, we are pleased to share the 17th Annual Medtronic Neuromodulation Product Performance Report.

We are proud of our pioneering history at Medtronic and we realize the responsibility that comes with driving innovation in technology. As the first and only company to offer a full line of Spinal Cord Stimulation, Deep Brain Stimulation, Sacral Neuromodulation and Targeted Drug Delivery therapies, we believe that performance reporting is of critical importance as we strive for better performance with every new product and therapy we develop. This report shows the evolution of product performance over time and also reveals advances in therapies that come with this experience and knowledge. Through this sharing of information, we can enable

physicians to best leverage state-of-the-art therapy delivery and also understand the performance of our devices to best manage patients.

We have tracked 23,323 patients in our ongoing post-market registry. The registry has enrolled 73,309 Neuromodulation system components. Components include pumps, catheters, neurostimulators, leads, and extensions. Data on other events not directly attributed to product performance are also included to provide additional information that may be important for patient management. Although gastric electrical stimulation also involves neurostimulation, the performance of these systems is not included in this report. We welcome your suggestions on content, format, and any information you may have regarding the performance of Medtronic products. If you have questions or comments,
please contact us through the information provided below.

Thank you for your support.

Todd Weaver, PhD, MPH
Clinical Research Director, Post Approval Clinical Surveillance Clinical Research, Medical Science and Regulatory Affairs (CMRA)

1.3 Contact Information

We invite our customers to use this telephone number to call with suggestions, inquiries, or specific problems related to our products or this report.

1.6 Glossary

Acronym	Term/Definition
AE	Adverse Event
CEC	Clinical Event Committee
CSF	CerebroSpinal Fluid
CRPS	Complex Regional Pain Syndrome
DBS	Deep Brain Stimulation
FBSS	Failed Back Surgery Syndrome
HLGT	High Level Group Terms
IM	Inflammatory Mass
INS	Implanted Neuro Stimulator
MedDRA	Medical Dictionary for Regulatory Activities
MRI	Magnetic Resonance Imaging
NEC	Not Elsewhere Classified
OCD	Obsessive Compulsive Disorder
PPE	Product Performance Events
PSR	Product Surveillance Registry
PTM	Personal Therapy Manager (TDD Therapy)
RPA	Returned Product Analysis
SAE	Serious Adverse Event
SCS	Spinal Cord Stimulation
SNM	Sacral Neuromodulation
SOC	System Organ Class
TDD	Targeted Drug Delivery

2 Methodology

2.1 Event Classification

Events currently collected in the registry include all events that appear or worsen during the registry and are a result of:

- Implanted or external components (device related),
- Implant or modification procedure (procedure related), or
- Infusion or stimulation therapy (therapy related).

Information on all deaths is also collected regardless of their relatedness to the device, implant procedure, and/or therapy.

For centers participating in the PSR protocol, specific therapy relevant events for deep brain stimulation are also collected and include:

- Negative changes in behavior from baseline,
- New or worsening depression from baseline, and
- New or worsened suicidal ideation from baseline, attempted suicide or completed suicide.

For some events related to implanted neuromodulation systems that did not exist in the MedDRA dictionary, Medtronic used their own coding system, and all results were integrated for reporting purposes.

2.1.1 Registry Definitions

In the registry, the events are defined as follows (see Figure 2.1 for the procedure to determine the event types):

- **Adverse Event:** any death or undesirable experience (associated with signs, symptoms, illnesses, or other medical events) occurring to the patient that appears or worsens during the clinical study and is possibly related to the device, procedure, and/ortherapy.
- **Device Event:** an issue with any of the implantable or external system components.
- **Therapy Relevant Event:** a therapy specific event type that may or may not be related to the device, procedure, or therapy.

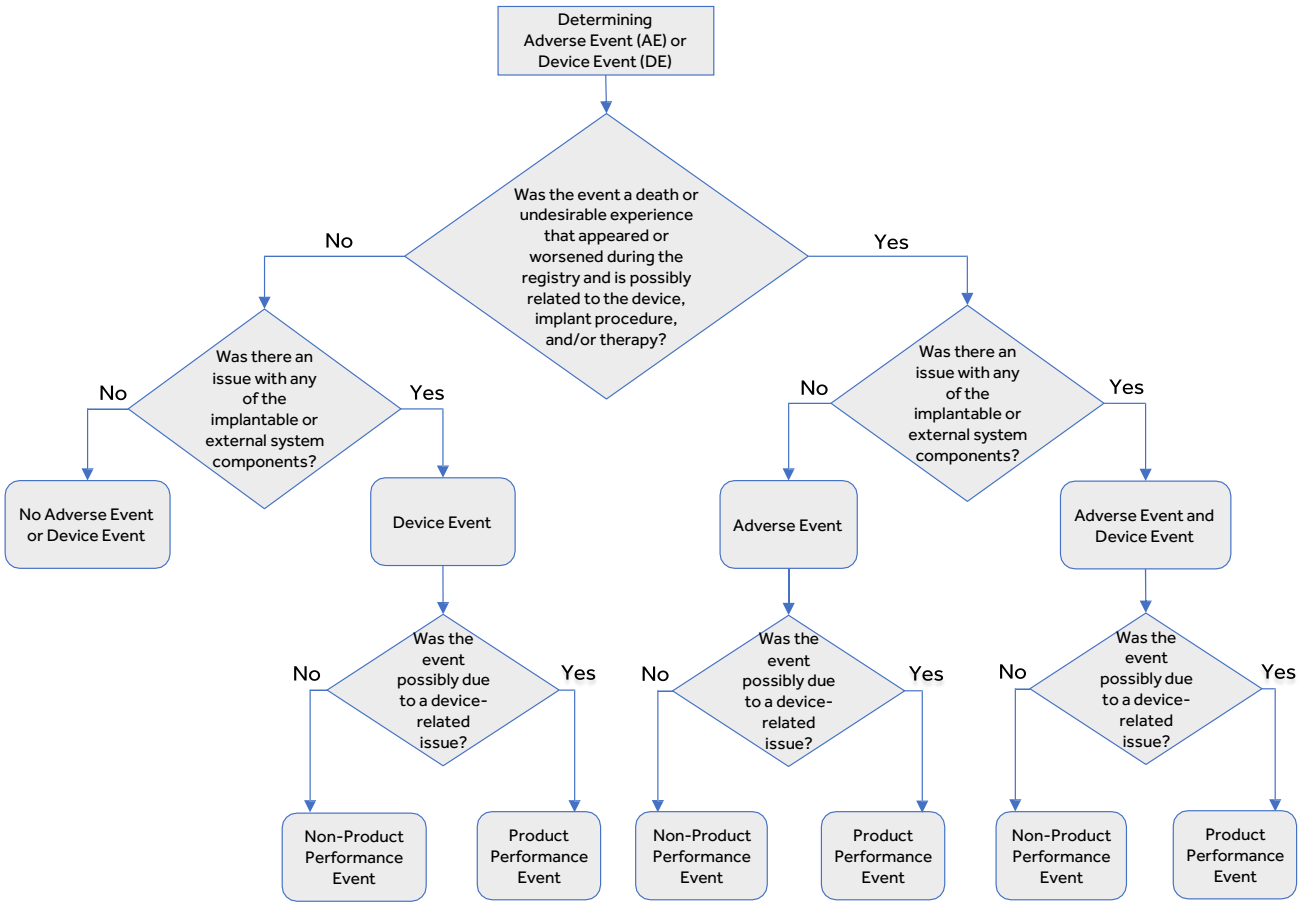

Figure 2.1: Adverse Event/Device Event Flowchart

2.1.2 Product Performance and Non-Product Performance Categorization

For analysis purposes, events collected were collapsed into two categories: product performance events and non-product performance events. All events were reviewed by Medtronic to determine if they were product performance-related (product performance events are events that are possibly due to a device-related issue). A non-product performance related event, or a clinical event not related to product performance, was any undesirable experience (associated with signs, symptoms, illnesses, or other medical events) occurring to the patient, and that appears or worsens during the clinical study. These clinical events not related to product performance possibly resulted from or were related to the implant procedure, or modification between implant and procedure, therapy, or delivery of therapy, and cannot be classified as product performance-related. All clinical events not related to a product performance and reported as a serious adverse event were summarized by MedDRA System Organ Class (SOC) if the event met a patient percentage threshold (0.5% to 1.0%).

2.1.3 Consistency and Accuracy

Consistency and accuracy of event reporting is monitored at four levels: through logic checks built into the study database as center personnel enter information; through review of each event by the study team as it is received by Medtronic; review by the Medical Advisor when necessary; and through routine monitoring at each center per Medtronic standard operating

procedures. Monitoring is accomplished through a risk-based approach that aligns with the current FDA guidance on monitoring. Through this approach not every data field is monitored but an emphasis is placed on data related to the primary objective (e.g., events). Clarification and subsequent adjudication of events may be required for, but is not limited to, the following reasons:

- Inconsistency with the protocols,
- Inconsistency with the instructions provided to the centers through training materials,
- Incomplete or inaccurate event description that makes a reported event reason, event reason detail, and the clinical data appear inadequate or inconsistent,
- Medtronic Customer Support and Vigilance Complaint management requirement for additional information, or
- Center personnel initiated corrections or additions.

2.2 Device Survival Analyses

Device performance is expressed in terms of device survival estimates, where "survival" refers to freedom from a product performance event, not the survival of the patient. These survival probabilities are estimated using the Kaplan-Meier method [1]. The estimates are intended to illustrate the probability that a device will survive for a given number of years without a product performance related event.

Active surveillance normally begins at the time of implant and continues until a product performance or censoring event occurs. In some cases, in the registry, active surveillance of a device starts after the device was implanted, which is called left truncation [1]. The survival probability of such a device is conditional on survival to the time when the device enters the registry. For the PPR analysis, a statistical method to incorporate data from these retrospectively enrolled devices was applied. Left truncation provides a statistical technique that uses data from existing devices while appropriately adjusting the device survival curves for the time the device was not actively followed in the registry. Thus, in some cases sample sizes may fluctuate from one time interval to the next interval.

Throughout this report, cumulative device survival plots are presented. These figures show the percentage of implanted devices that remain free from product performance-related events at various time points. This survival estimate is a good representation of the probability a device will survive a period of time without a product performance event. For example, a device survival probability of 90% indicates that through the stated follow-up time, the device had a 10% risk of incurring a product performance event since the time of implant.

The survival curves are statistical estimates. As performance experience accumulates, the accuracy of the estimation improves. Confidence intervals are provided as a way to indicate the degree of certainty of the estimates. Greenwood's formula is used to calculate the standard errors, and the log-log method is used to produce the 2-sided 95% confidence bounds [2]. This can be roughly interpreted as meaning that the true survival of the device will fall somewhere in the interval, with 95% probability. When confidence intervals for device models overlap,

estimates of survival from product performance-related events may not be different between models. When confidence intervals do not overlap, estimates of survival from product performance-related events may be different between models. Statistical significance may be further evaluated using the Log-rank test or Wilcoxon test as appropriate.

The device survival curves are presented through all continuous time points where there are at least 20 devices and are cut off at the last 3-month time point where at least 20 total devices were still being followed. Since the survival estimate can become very imprecise with small sample sizes, a minimum of 20 devices must have at least 12 months of follow-up as of the report cut-off date to present a survival curve in this report. Device survival estimates are presented at the device level, not at the system level which involves the combination of two or more devices.

2.3 Returned Product Analysis

Registry devices that are returned to Medtronic are analyzed via a Returned Product Analysis (RPA) process following protocols to confirm proper functioning or identification of root cause for any failure or deficiency. For registry pumps and neurostimulators that are returned, and for which RPA establishes a root cause or finds no anomaly, results reported herein reflect the RPA finding unless otherwise indicated in this report. When available, RPA findings are also used as one of the sources to identify the root cause of failure or deficiency for catheters and leads. In cases where the center does not explant and/or return a device, the physician-reported event reason is used for classification and analysis purposes.

Medtronic uses data from RPA as well as complaint reports from non-returned product for ongoing quality monitoring and improvement efforts. This report presents data from the registry including the results of RPA for returned devices from registry centers and patients. Data from RPA outside the registry centers and patients are not presented in this report.

3 Targeted Drug Delivery Systems

3.1 Study Participants

3.1.1 Centers

The Targeted Drug Delivery (TDD) tables and graphs were generated based on data collected between August 7, 2003, and the report cut-off date of October 31, 2024. Seventy-seven centers spanning 13 countries/territories in North America, Europe and South America, enrolled patients and contributed patient data to the targeted drug delivery systems section of this report. Figure 3.1 shows a World Map, in which the countries that enrolled TDD patients are highlighted.

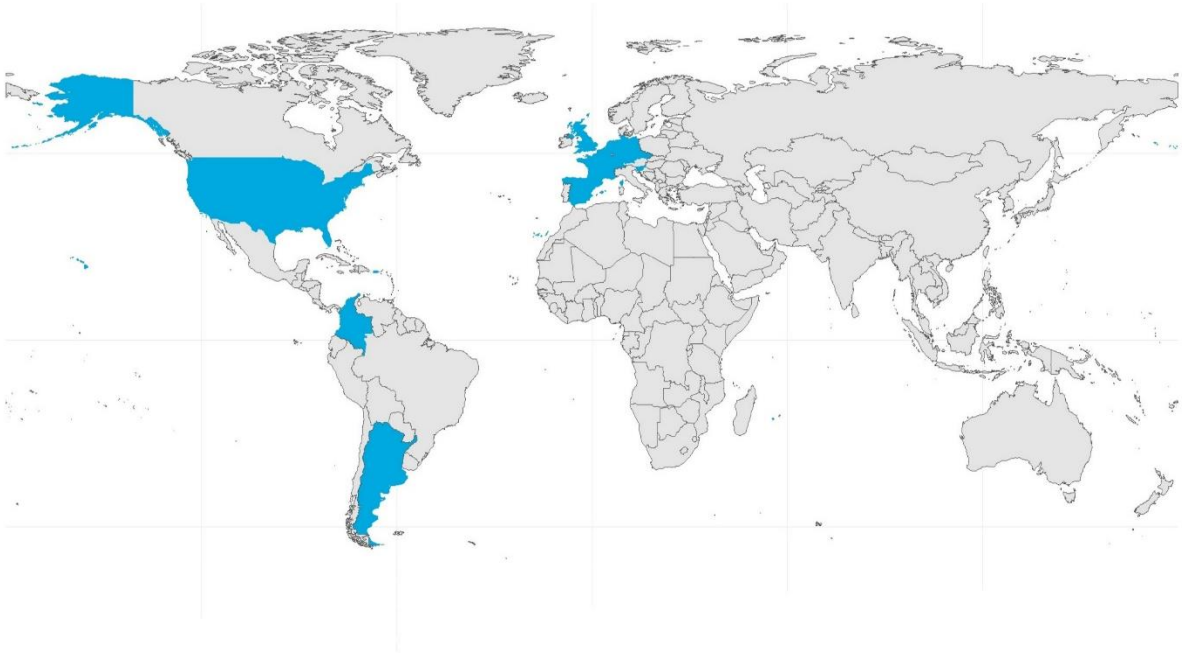

Figure 3.1: Countries with Targeted Drug Delivery Therapy Patients in Registry (Highlighted)

3.1.2 Patients

There were 10,793 total targeted drug delivery system patients enrolled through October 31, 2024. In Table 3.1 and Figure 3.2, 59.5% of patients were implanted with a targeted drug delivery system for treatment of non-malignant pain (pain not related to cancer and its treatment), followed by 21.2% for treatment of spasticity, and 17.0% for treatment of malignant pain (pain related to cancer). Primary treatment indication is provided by the physician. The sites of pain for the malignant pain patients are presented in Table 3.2, while the sub-indications for the non-malignant pain and the spasticity patients are presented in Table 3.3 and Table 3.4, respectively.

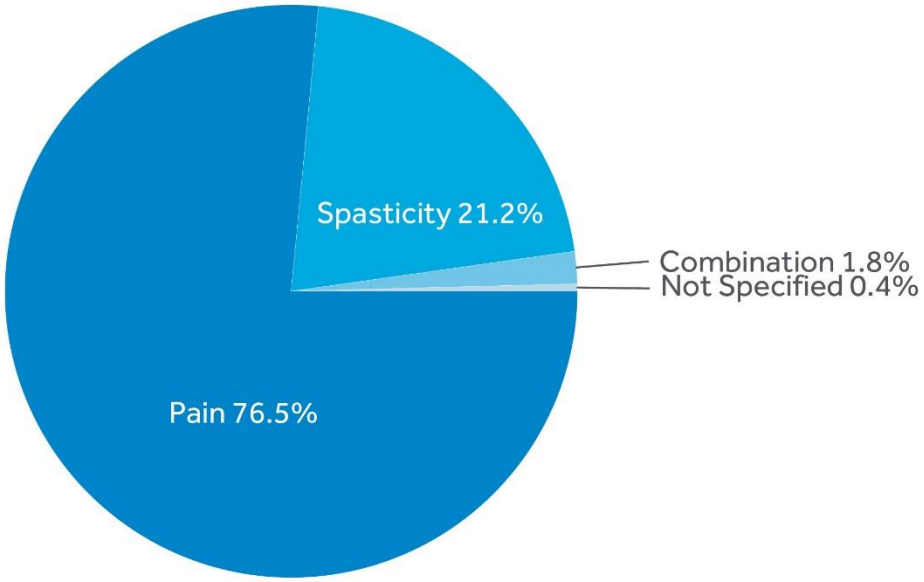

Figure 3.2: Targeted Drug Delivery Primary Treatment Indications

Table 3.1: Targeted Drug Delivery Primary Treatment Indications

Primary Treatment Indication[a]	Enrolled Patients (%)
Pain	**8259 (76.5%)**
Non-malignant pain	6419 (59.5%)
Malignant pain	1839 (17.0%)
Pain not specified	1 (<0.1%)
Spasticity	**2293 (21.2%)**
Combination	**196 (1.8%)**
Non-malignant pain & Spasticity	193 (1.8%)
Malignant pain & Chemotherapy	1 (<0.1%)
Malignant pain & Spasticity	1 (<0.1%)
Non-malignant pain & Chemotherapy	1 (<0.1%)
Not Specified[b]	**45 (0.4%)**
Total Patients	**10793**

[a] For approved indications refer to product labeling for your geography.
[b] Includes incomplete data forms at the time of the data snapshot and exited patients where indication was never provided.

Table 3.2: Targeted Drug Delivery Malignant Pain: Site of Pain

Malignant Pain: Site of Pain	N (%)
Spine/Back	761 (41.3%)
Abdominal/Visceral	451 (24.5%)
Extremity	341 (18.5%)
Pelvic	251 (13.6%)
Thoracic	206 (11.2%)
Head/Neck	128 (7.0%)
Other	207 (11.2%)
Not Specified	439 (23.8%)
Total Patients[a]	**1841**

[a] 2784 sites of pain in 1,841 patients with indications of malignant pain, malignant pain &chemotherapy, and malignant pain &spasticity. Total number of patients is not equal to number of reported sites of pain as patients may have multiple sites of pain.

Table 3.3: Targeted Drug Delivery Non-Malignant Pain: Sub-Indications

Non-Malignant Pain: Sub-Indications	Enrolled Patients (%)
Back Pain with Leg Pain	2352 (35.6%)
Back Pain without Leg Pain	1715 (25.9%)
General Neuropathic Condition	251 (3.8%)
CRPS I[a]	205 (3.1%)
Peripheral Neuropathy	85 (1.3%)
Joint Pain/Arthritis	74 (1.1%)
General Nociceptive Condition	59 (0.9%)
CRPS II[a]	39 (0.6%)

Non-Malignant Pain: Sub-Indications	Enrolled Patients (%)
Osteoporosis	20 (0.3%)
Abdominal pain	13 (0.2%)
Pelvic pain	9 (0.1%)
Other	836 (12.6%)
Not Specified	955 (14.4%)
Total Patients[b]	**6613**

[a] CRPS is complex regional pain syndrome.

[b] Includes patients with indications of non-malignant pain, non-malignant pain & spasticity, and non-malignant pain & chemotherapy.

Table 3.4: Targeted Drug Delivery Spasticity: Sub-Indications

Spasticity: Sub-Indications	Pediatrics (%) (<18 years)	Adults (%) (>=18 years)	All Patients (%)
Cerebral Palsy	388 (77.1%)	287 (14.5%)	675 (27.1%)
Multiple Sclerosis	0 (0.0%)	597 (30.1%)	597 (24.0%)
Spinal Cord Injury	9 (1.8%)	394 (19.9%)	403 (16.2%)
Brain Injury	39 (7.8%)	130 (6.6%)	169 (6.8%)
Stroke	1 (0.2%)	103 (5.2%)	104 (4.2%)
Other	22 (4.4%)	243 (12.2%)	265 (10.7%)
Not Specified	44 (8.7%)	230 (11.6%)	274 (11.0%)
Total Patients[a]	**503**	**1984**	**2487**

[a] Includes patients with indications of spasticity, non-malignant pain & spasticity, and malignant pain & spasticity.

It is recognized that health care providers prescribe therapies to meet specific patient needs; however, Medtronic only directs the use of its products based on approved labeling. Product labeling varies by geography. Contact a local Medtronic representative for region-specific product labeling - https://www.medtronic.com/us-en/our-company/locations.html .

3.2 Event Summary

Events are reported via database by physicians trained in the PSR. Events are reviewed internally and coded as either a product performance event (e.g. catheter kink, motor stall) or a non-product

performance event (e.g. adverse drug reaction and incision site swelling). There were 2,632 product performance events reported between August 7, 2003 and October 31, 2024, in 1,691 patients with targeted drug delivery systems. These events represent 13.1% (2632/20,034) of the total reported events and are presented graphically within this report (e.g. events per patient years as well as survival curves). As an ongoing registry, events not coded at the time of the data snapshot (waiting for further information) will be included in future reports (n=884).

All registry devices that are returned to Medtronic are analyzed via a Returned Product Analysis (RPA) process. If available, RPA findings assist in the classification of the events. Within this report, Table 3.5 and the event tables in the pump and catheter sections differentiate the events by those determined by the RPA process versus those determined by the physician. Please refer to the Methodology section for more information.

There were 2,933 deaths reported in patients with targeted drug delivery systems (see Table 3.12). None of these deaths were reported as a direct result of a product performance event. Early versions of the protocol required events to be reported only when the event required a surgical intervention, resulted in therapy abandonment, or resulted in death. The required event reporting definition was expanded in April 2010 to include all adverse events related to the device, implant procedure, and/or therapy. Table 3.5 includes combined data from these versions of the protocol.

3.2.1 Product Performance Events

Table 3.5: Targeted Drug Delivery System Product Performance Events

Product Performance Events[a]	Event Counts	Events Per 100 Patient Years	Patients with Events (%) N=10793[b]
RPA Determination	**359**	**0.9**	**327 (3.0%)**
Pump Motor Stall	197	0.5	190 (1.8%)

Total	**2,632**	**6.4**	**1691 (15.7%)**

[a] Medical Dictionary for Regulatory Activities (MedDRA) Lower-Level Term or Medtronic's coding system term for events that do not exist in the MedDRA dictionary.

[b] The total number of patients with events may not represent the sum of all rows, as a patient may have experienced more than one type of event.

[c] Of the 197 RPA-determined motor stalls, 196 had a pump etiology and 1 had other etiology. Motor stall count does not include temporary motor stalls that may be expected (e.g. due to MRI) and recovered within a 24-hour period. The SynchroMed II and Synchromed III pumps are designed to temporarily stop the rotor of the pump motor and suspend drug infusion for the duration of the MRI exposure for patient safety.

[d] Includes pumps that had a laboratory finding but the patient did not have clinical signs or symptoms consistent with pump overinfusion.

[e] Patient had clinical signs and symptoms consistent with pump overinfusion, pump returned and positive laboratory test.

[f] Composed of event codes with 1 event each.

[g] The majority of these events were attributed to the Patient Therapy Manager (PTM).

[h] Of the 97 physician-determined motor stalls, 88 had a pump etiology and 9 had an MRI etiology. Of the 9 physician-determined motor stalls with an MRI etiology, 3 pumps were reprogrammed and 6 had no action taken. Motor stall count does not include temporary motor stalls that may be expected (e.g. due to MRI) and recovered within a 24-hour period. The SynchroMed II and Synchromed III pumps are designed to temporarily stop the rotor of the pump motor and suspend drug infusion for the duration of the MRI exposure for patient safety.

[i] Of the 16 device issues, 12 have an etiology of catheter or other component. The 16 device issues include 8 unable to aspirate catheter, 4 PTM Error Codes, 2 pump alarms, and 1 pump in safe state.

[j] Includes1 where metal clips on connector appear bent, 1 pump beeping, and 1 roller arm seized to ball bearing.

[k] Patient had clinical signs and symptoms of overinfusion, but pump not returned and analyzed.

[l] Return Product Analysis (RPA) found no anomaly with the pump but physician initially reported an issue with the device. Events remain reported as PPE for transparency.

A total of 1,862 of the 2,632 product performance events were related to the catheter only. There were 541 events related to the pump only. There were 175 related to other components (e.g. PTM malfunction) and 54 (2.1%) related to other etiologies (e.g. bend in catheter anchor). Relatedness is reported by the physician.

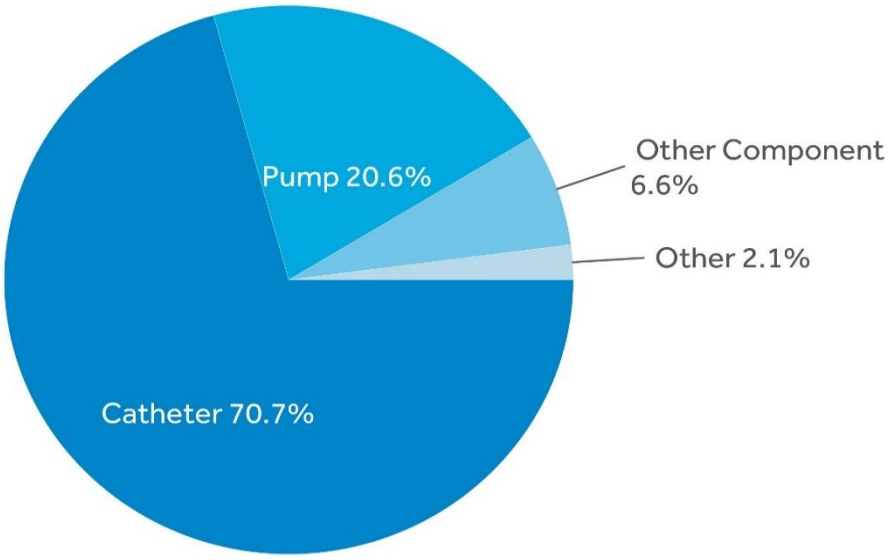

Figure 3.3: Targeted Drug Delivery System Product Performance Events by Relatedness

Table 3.6 describes the interventions completed for product performance events that required action from the health care provider and thereby may have resulted in an incremental impact to the patient. Survival estimates presented in previous product performance reports included events where no action was taken. To present survival estimates that may better correlate with patient impact, events where no action was taken have been removed from the device survival estimates presented in this report. The far-left column lists the top five reported PPEs, and all other reported PPEs are listed under Other. The subsequent columns represent the actions taken

by the reporting physician.

Table 3.6: TDD Product Performance Events by Intervention

Events by Intervention	Surgical Intervention	Reprogramming	Medical or Non-Surgical Intervention[a]	Therapy Suspension	No Action Taken	Total Events
Catheter Occlusion	494 (91.7%)	12 (2.2%)	17 (3.2%)	7 (1.3%)	9 (1.7%)	**539**
Catheter Dislodgement	380 (88.2%)	9 (2.1%)	8 (1.9%)	2 (0.5%)	32 (7.4%)	**431**
Catheter Kink	256 (91.1%)	6 (2.1%)	14 (5%)	1 (0.4%)	4 (1.4%)	**281**
Catheter Break/Cut	259 (94.9%)	1 (0.4%)	6 (2.2%)	1 (0.4%)	6 (2.2%)	**273**
Pump Motor Stall	167 (69%)	15 (6.2%)	4 (1.7%)	9 (3.7%)	47 (19.4%)	**242**
Other[b]	494 (63.3%)	31 (4.0%)	152 (19.5%)	5 (0.6%)	98 (12.6%)	**780**
Total	**2050 (80.5%)**	**74 (2.9%)**	**201 (7.9%)**	**25 (1.0%)**	**196 (7.7%)**	**2546[c]**

[a] Medical or Non-Surgical Therapy contains but is not limited to the following actions: medication adjustment based on disease symptoms, imaging (e.g. MRI or X-ray), other specialist referral.

[b] Other represents all reported PPEs that were not in the top five of occurrence.

[c] The total number of events in this table differs from the total number of PPEs overall due to 86 events with an unknown intervention, which are excluded.

3.2.2 Clinical Events Not Related To Product Performance

The clinical events not related to product performance are summarized if:

- The patient was enrolled in the PSR at the time in which the clinical event collection was initiated (n=4,217)
- Categorized as serious adverse events (SAEs, n=551)
- Occurred with a System Organ Class (SOC) threshold ≥1% of patients
- Other Considerations
  - Some events are described in high level group terms (HLGT) to provide more specificity, if needed

- Some therapies will provide therapy relevant events (e.g., Inflammatory Mass, Cerebrospinal Fluid Leaks)

Table 3.7: Targeted Drug Delivery Clinical Events Not Related To Product Performance

Event Type	Number of SAEs	Patients with SAE n (%) N=4,217	SAEs Per 100 Patient Months	Patients with SAE Requiring Surgical Intervention n (%) N=4,217
General disorders and administration site conditions	**238**	**212 (5.0%)**	**0.17**	**53 (1.3%)**

[a] Not Elsewhere Classified.

[b] Composed of high level group term event codes with fewer than 5 events each.

3.2.3 Therapy Relevant Events

3.2.3.1 Cerebrospinal Fluid Leaks

Potential cerebrospinal fluid (CSF) leak events are identified and assessed by Medtronic personnel and the site physician for the case to ascertain the case definition using Table 3.8.

Table 3.8: Cerebrospinal Fluid Leak Event Definition

Case Definition	Ascertainment
Definitive CSF Leak	• Observation of clear fluid leaking from the wound, or • Contrast study demonstrates extravasation of dye outside dura, or • Patient with persistent post-operative ***positional*** headache, plus one of the following: – Blood patch or suturing relieves headaches, or – Subcutaneous ***persistent*** fluid collection on the catheter tract, or – Meningeal enhancement on MRI with contrast.

Probable CSF Leak	**Reproducible** post-operative **positional** headache for >14 days with or without report of subcutaneous fluid collection. No contrast study performed or contrast study result inconclusive.
Possible CSF Leak	**Intermittent** post-operative **positional** headache for >14 days without report of subcutaneous fluid collection. No contrast study performed or contrast study result inconclusive.
Not CSF Leak	Acute post-operative non-positional headache lasting less than 14 days.

The potential CSF leak status (N=520) at the time of this analysis is presented in Table 3.9 with a definitive and probable CSF leak rate of 1.5% (167/10,793). The causality of the CSF leak event is dependent on the individual case.

Table 3.9: Summary of Cerebrospinal Fluid Leak Adjudication

Cases Reviewed	Definitive CSF Leak	Probable CSF Leak	Possible CSF Leak	Not CSF Leak	Unspecified[a]
520	145	22	32	215	106

[a] Unadjudicated due to the timing of the data or due to the site no longer being active.

3.2.3.2 Inflammatory Masses

Inflammatory mass (IM), also sometimes reported as catheter-tip inflammatory mass or an intrathecal granuloma, is a potential complication of intrathecal opioid drug therapy. In order to better quantify the incidence of inflammatory mass, all events were evaluated for a report of inflammatory mass. For these identified cases, the medical records were reviewed by Medtronic personnel together with radiographic images when available. The radiographic images were reviewed to determine if there was evidence of an intradural extramedullary enhancing lesion. The adjudication team assessed each case based upon the case definition and ascertainment guideline presented in Table 3.10. A summary of cases evaluated for IM through the data cut-off is shown in Table 3.11.

Table 3.10: Case Definition and Ascertainment of Inflammatory Mass

Case Definition	Ascertainment
Definitive IM	Surgical and histological verification or clinical symptoms plus contrast enhanced MRI or CT myelogram and resolution of lesion following cessation of drug exposure
Probable IM	No surgical or histological verification, but clinical criteria and enhanced MRI or CT myelogram criteria are present
Possible IM	Medical records document IM, but there is no surgical or histological verification, there are no clinical criteria, and no radiographic data are available

Not IM	Surgical and histological verification that lesion is another disease process rather than IM, or radiographic data do not show an intrathecal lesion

There were a total of 136 suspected cases of inflammatory mass (Table 3.11) that were discerned from evaluation of patient records and reviewed by the adjudication team. Medtronic will continue to evaluate reports of inflammatory mass. Any previously classified case of IM will be re-evaluated if new evidence is received after this report. An analysis of the adjudicated definitive and probable inflammatory mass cases in the PSR from 2003 through October 2024 indicates an incidence of 0.22% (18/8,259) for pain patients and 0.00% (0/2,293) for spasticity patients.

Table 3.11: Summary of Inflammatory Mass Adjudication

Year of Event	Cases Reviewed	Definitive IM	Probable IM	Possible IM	Not IM

3.2.4 Patient Deaths

In earlier versions of the protocol, deaths were only assessed for the relatedness to the device product performance. After 2010, death assessments were expanded to also include the relationship to the implant procedure and/or therapy. As of the report cut-off, a total of 2,933 patients in the registry had expired. No deaths were reported as a direct result of a product performance event. Although, three deaths were assigned by the physician as possibly related to the implant procedure and/or therapy.

Of the three deaths possibly related to the procedure and/or therapy, one death was due to a pulmonary embolism where the treating physician stated that the event could be possibly related to the withdrawal of the intrathecal medications. The patient had experienced a lack of therapy due to a missed refill visit leading to the withdrawal and not to the device malfunctioning. Medtronic Medical Safety assessed this death event as possibly related to the to the lack of therapy. A second death was reported by the treating physician as due to acute respiratory failure possibly related to the procedure and/or therapy. This patient had a history of persistent upper respiratory tract problems, difficulties swallowing and chronic aspiration as the result of cancer-related treatments. Medtronic Medical Safety assessed this death event as possibly related to the surgery/anesthesia during the implant procedure and therapy. The third death was reported by the physician as due to respiratory distress possibly related to the intrathecal medication. This patient had multiple comorbidities with multiple concomitant medications and a decreased level of physical activity. The death records state the cause of death as probable arteriosclerotic cardiovascular disease. Medtronic Medical Safety determined this event as not assessable due to incomplete information.

Since 2003, a total of 1,476 (50.3%) deaths have been reported in this patient registry study based upon patients receiving therapy for malignant pain, 1,098 (37.4%) for non-malignant pain, 329 (11.2%) for spasticity, 26 (0.9%) for non-malignant pain & spasticity, 1 (<0.1%) for malignant pain & chemotherapy, and 3 (0.1%) for not specified primary indication (see Table 3.12). The percentage is based upon the total patient death events and not based upon the rate of occurrence. **All tables depicted without a patient denominator should not be interpreted using other numbers within this report to calculate event rates.**

Table 3.12: Targeted Drug Delivery System Patient Deaths by Primary Indication

Number of Reports of Death by Primary Indication[a]	N (%) of Deaths
Malignant pain	1476 (50.3%)
Non-malignant pain	1098 (37.4%)
Spasticity	329 (11.2%)
Non-malignant pain & Spasticity	26 (0.9%)
Malignant pain & Chemotherapy	1 (<0.1%)
Not Specified	3 (0.1%)
Total	**2933**

[a] For approved indications refer to product labeling for your geography.

3.3 Pumps

From August 7, 2003, to the report cut-off date of October 31, 2024, there were 13,848 pumps followed in the registry. The difference between the total number of patients (n=10,793) versus the total number of pumps is due to the fact that some patients were subsequently re-implanted with a pump multiple times. The aggregate prospective follow-up time for all pumps was 479,590 months (39,966 years). Table 3.13 provides the number and percentage of pumps by model number.

3.3.1 SynchroMed II Design Change: Pump Enhancements; SynchroMed III

Design changes to the SynchroMed II 20 mL and 40 mL pump models were implemented to reduce the likelihood of non-recoverable motor stalls. These changes were released incrementally, allowing for the pumps to be considered in three groups: 1) Pre-Enhancements (prior to 2016), 2) the Modified Gear Wheel Material and Encapsulated Feedthroughs (GW3/FT) enhancements (released January 2016) and 3) the Applied Diamond Like Coating (GW3/FT/DLC) enhancement (released July 2017). All enhancements were communicated in the August 2017 Medical Device Safety Notification: SynchroMed II Implantable Drug Infusion Pump Design Change Model Numbers 8637-20, 8637-40. For details, please visit https://www.medtronic.com/content/dam/medtronic-com/professional/documents/ product-advisories/tdd/synchromed-pump-design-change-august-2017-hcp-letter.pdf. Table 3.13 provides the number and percentage of pumps by model and pump enhancement.

The SynchroMed III was released in 2023 and includes the same enhancements as the GW3/FT/DLC pump as well as additional enhancements.

Table 3.13: Targeted Drug Delivery Pump Counts by Model and Pump Enhancement

Model Name	N (%)
SynchroMed III 40 mL	**145 (1.0%)**
GW3/FT/DLC Enhancements	145 (1.0%)
SynchroMed III 20 mL	**45 (0.3%)**
GW3/FT/DLC Enhancements	45 (0.3%)
SynchroMed II 40 mL	**7832 (56.6%)**
Pre-Enhancements[a]	4630 (33.4%)
GW3/FT/DLC Enhancements[a]	2664 (19.2%)
GW3/FT Enhancements[a]	538 (3.9%)
SynchroMed II 20 mL	**4640 (33.5%)**
Pre-Enhancements[a]	2963 (21.4%)

Model Name	N (%)
GW3/FT/DLC Enhancements[a]	1315 (9.5%)
GW3/FT Enhancements[a]	362 (2.6%)
SynchroMed EL 18 mL[a]	**1146 (8.3%)**
SynchroMed EL 10 mL[a]	**34 (0.2%)**
SynchroMed Classic[a]	**5 (<0.1%)**
Other/Unspecified	**1 (<0.1%)**
Total	**13848**

[a] No longer manufactured.

The pump product performance-related events by model, pre-SynchroMed II enhancements and post-SynchroMed II enhancements are summarized in the pump models section.

3.3.2 Pump Events

There were 546 product performance-related events with an underlying reported etiology related to pump function. This includes 541 events with a pump etiology and 5 events with both a pump and other etiology (including device and non-device etiologies). Of these, 467 were the initial product performance event that affected pump survival estimates. For pumps in the registry, the current return rate to Medtronic Returned Product Analysis (RPA) was 26.5% (1,951/7,363). The proportion was based upon the number of registry pumps received by RPA, divided by the sum of the total number of explanted devices and the total number of pumps in patients who have expired. In the 546 pump events, 35.5% (194/546) were assigned as device related by the physician, not returned to Medtronic RPA (see Figure 3.4). For the purposes of survival analysis, a device's follow-up time is cut off for one of three reasons: 1) the occurrence of a product performance-related event; 2) the occurrence of a censoring event; or 3) the device is event-free and censored at the patient's last follow-up prior to the data cut-off. For pumps:

- 467 had follow up time cut-off due to product performance-related events.
- 11,196 were censored in the survival analysis for the following reasons: patient expired, pump explanted, site termination, patient discontinued, patient lost to follow-up, or therapy suspended.
- 2,185 were free from product performance-related events and censoring events, and were censored at the last follow-up visit prior to the report cut-off.

3.3.3 Pump Models

The following figures and tables represent the SynchroMed II pump characteristics, survival

(including 95% confidence intervals), specifications and events by model. Since the survival estimate may become very imprecise with smaller sample sizes, the device survival curves below are truncated when the sample size is less than 20 active devices for each 3-month interval. The SynchroMed III pump survival is not shown due to small sample size of enrolled and tracked devices. The survival of SynchroMed EL model was not shown since it has no active devices in the PSR. For information on this model, please refer to the 2017 or earlier reports.

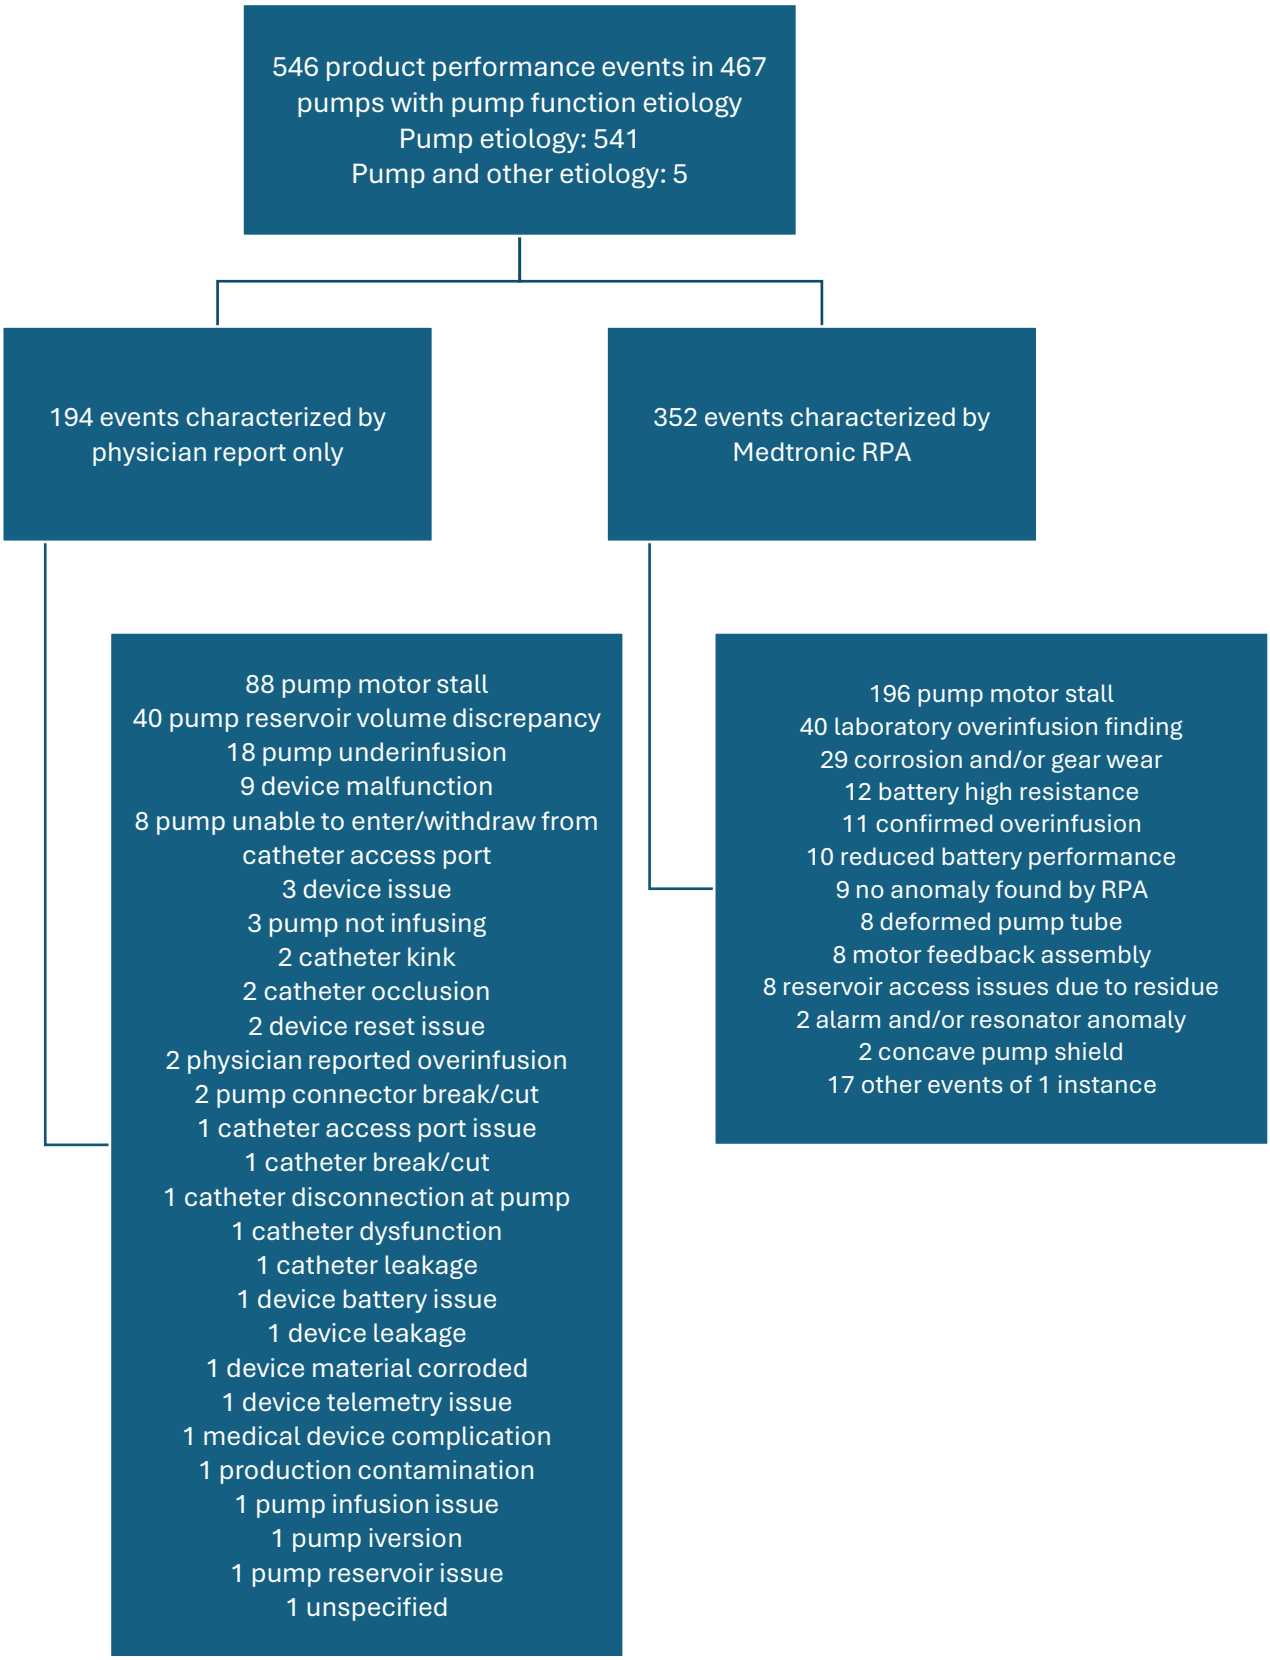

Figure 3.4: Distribution of Pump Function Etiology Product Performance Events

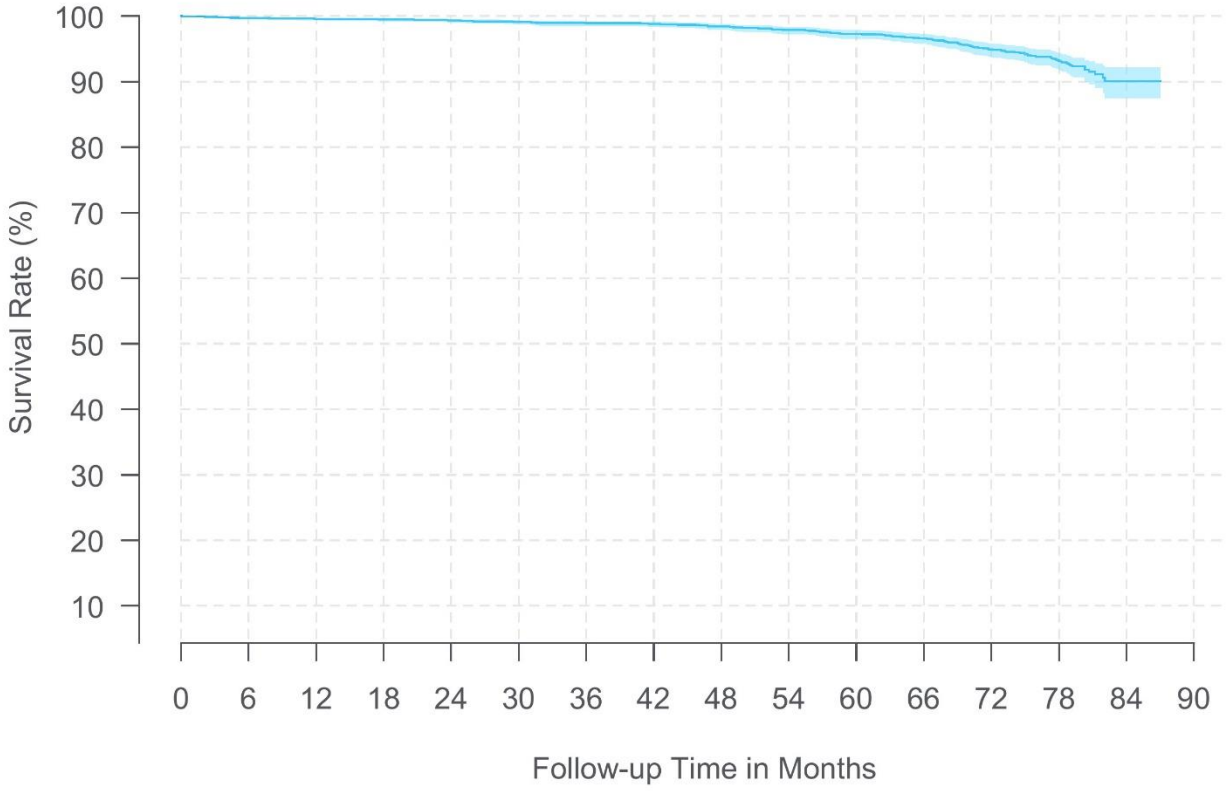
3.3.3.1 Model 8637-20

Model/Name	SynchroMed II 20 mL
FDA Approval Date	September 2003
Pumps Enrolled	4,640
Pumps Currently Active in Study	714
Initial Product Performance Events	129
Median Follow-up Time (Months)	39.0
Cumulative Follow-up Time (Months)	190,651



Time Interval	1 Year	2 Years	3 Years	4 Years	5 Years
Survival (95% CI)	99.6% (99.3%, 99.8%)	99.4% (99.0%, 99.6%)	98.9% (98.5%, 99.2%)	98.4% (97.9%, 98.8%)	97.3% (96.6%, 97.9%)
Sample Size	3519	2995	2477	2002	1598

Time Interval	6 Years	7 Years	At 87 Months
Survival (95% CI)	94.9% (93.8%, 95.8%)	90.1% (87.5%, 92.2%)	90.1% (87.5%, 92.2%)
Sample Size	1178	44	21

Specification: 8637-20	
Expected battery life[a]	6-7 years
Thickness	0.77 in (19.5 mm)
Diameter	3.4 in (87.5 mm)
Capacity	20.0 mL
Minimal Programmable Flow Rate[b]	0.048 mL/day
Maximum Programmable Flow Rate[b]	24 mL/day
Minimum Rate Infusion Mode[c]	0.006 mL/day

[a] Dependent on flow rate. Designed to shut off at 84 months.

[b] Actual limits depend on pump calibration constant and selected infusion mode.

[c] Nontherapeutic (if therapy is to be temporarily discontinued).

3.3.3.3 Model 8667-20

Model/Name	SynchroMed III 20 mL
FDA Approval Date	October 2023
Pumps Enrolled	45
Pumps Currently Active in Study	39
Initial Product Performance Events	0
Median Follow-up Time (Months)	0
Cumulative Follow-up Time (Months)	44

There is not sufficient data to report on SynchroMed III 20 mL (model 8667-20) survival at 1 year or later and there have been no reported product performance events for this model as of the data cut-off date.

Specification: 8637-40	
Expected battery life[a]	6-7 years
Thickness	1.0 in (26 mm)
Diameter	3.4 in (87.5 mm)
Capacity	20.0 mL
Minimal Programmable Flow Rate[b]	0.048 mL/day
Maximum Programmable Flow Rate[b]	24 mL/day
Minimum Rate Infusion Mode[c]	0.006 mL/day

[a] Dependent on flow rate. Designed to shut off at 84 months.

[b] Actual limits depend on pump calibration constant and selected infusion mode.

[c] Nontherapeutic (if therapy is to be temporarily discontinued).

3.3.3.4 Model 8667-40

Model/Name	SynchroMed III 40 mL
FDA Approval Date	October 2023
Pumps Enrolled	145
Pumps Currently Active in Study	130
Initial Product Performance Events	0
Median Follow-up Time (Months)	0.4
Cumulative Follow-up Time (Months)	165

There is not sufficient data to report on SynchroMed III 40 mL (model 8667-40) survival at 1 year or later and there have been no reported product performance events for this model as of the data cut-off date.

Specification: 8667-40	
Expected battery life[a]	6-7 years
Thickness	1.0 in (26 mm)
Diameter	3.4 in (87.5 mm)
Capacity	40.0 mL
Minimal Programmable Flow Rate[b]	0.048 mL/day
Maximum Programmable Flow Rate[b]	24 mL/day
Minimum Rate Infusion Mode[c]	0.006 mL/day

[a] Dependent on flow rate. Designed to shut off at 84 months.

[b] Actual limits depend on pump calibration constant and selected infusion mode.

[c] Nontherapeutic (if therapy is to be temporarily discontinued).

3.3.3.5 SynchroMed II 20 mL and 40 mL: Pre-enhancements

Model/Name	Pre-Enhancements
FDA Approval Date	September 2003
Pumps Enrolled	7,593
Pumps Currently Active in Study	2
Initial Product Performance Events	399
Median Follow-up Time (Months)	34.7

3.4 SynchroMed II Pumps Exposed to On-Label and Off-Label Medications

The purpose of this analysis is to provide additional information regarding the product performance of SynchroMed II pumps exposed to On-Label and Off-Label medications. This report contains information outside the FDA approved labeling for the Medtronic SynchroMed II Infusion System. The long-term drug stability/compatibility and safety and/or efficacy of drugs not listed in the SynchroMed II Infusion System product labeling have not been established in the United States. It is recognized that healthcare providers prescribe therapies to meet specific patient needs; however, Medtronic only directs the use of its products based on approved regulatory labeling. For the purposes of this report, On-Label and Off-Label determinations have been made based on the United States FDA approved labeling. However, product labeling varies by geography, so please contact your local Medtronic representative by going to the SynchroMed™ III Intrathecal Pump | Medtronic website and clicking on "Contact and Support" for region-specific product labeling.

In this registry, patient status updates were obtained at least annually, until discontinuation of therapy, or until the patient was lost to follow-up. Medications within the pump were recorded at least annually. The interim data collection provided a snapshot of medication use at these points in time. This data is only for SynchroMed II pumps and does not include SynchroMed III pumps.

3.4.1 Pump Groups On/Off-Label Categorization

Through October 31, 2024, 9,543 patients (56.0% female, mean/SD age 54.2/17.5 years) have enrolled in the registry and have been implanted with 12,472 SynchroMed II pumps. At least one drug record was available on each of 11,786 pumps; if no drug records were available (n=686 pumps), the pump was excluded from this analysis. 11,786 pumps were categorized as being On- or Off-Label using the following criteria:

- **On-Label:** If a pump has at least one drug record in the registry, and none of the records show Off-Label drug exposure, that pump is considered On-Label even if the complete drug history of that pump is unknown.
  - For pumps used for pain patients, if the drug record has only one drug and it was morphine or ziconotide (or their brand names), and it was not a compounded drug, these pumps were considered On-Label. Note: The classification was based on the name of the drug only, not the reported concentration of the drug.

- For pumps used for spasticity patients, if the drug record has only one drug, and it is either Lioresal® (baclofen injection) or Gablofen® (baclofen injection), that drug record was considered On-Label. Note: The classification was based on the name of the drug only, not the reported concentration of the drug. For this analysis, if only the generic chemical classification, such as baclofen, was entered then the assumption was that the drug was On-Label.
- Pumps with an On-Label drug history and currently containing preservative free water or preservative free saline, or if previously contained preservative free water/saline and currently containing On-Label drug were considered On-Label.

- **Off-Label:** Any drugs not within the approved indications specified above are considered Off-Label. Additionally, any drug record with more than one drug at a time in the pump (admixture) was considered Off-Label.
  - If a pump had any known exposure to Off-Label drugs (i.e., the Off-Label data have been collected in the registry), that pump was considered Off-Label, regardless of the amount of exposure time.
  - If a pump is filled with a medication that was reported as compounded, that pump was considered Off-Label.

3.4.2 Data Analysis

Survival estimates were calculated using the methods described in the Methodology section of this report. Statistical testing that compared survival curves was performed using a Cox proportional-hazards model. Since the survival estimate may become very imprecise with small sample sizes, Medtronic Neuromodulation's registry truncates device survival curves when the sample size is less than 20 active devices. At this threshold, one device failure yields a 5% decrease in cumulative survival. Additionally, the standard error for this survival estimate is approximately 5% (depending on previous conditional survival estimates), with 95% confidence intervals of approximately 10%. Overall, this large variability of 20% around the cumulative survival estimate would greatly reduce the precision for the point estimate.

Pump survival from product performance-related events was calculated and compared for the following groups:

- Total study population: On-Label vs. Off-Label Drugs (including all indications)
- Pain study population: On-Label vs. Off-Label Drugs (including all pain indications)
- Spasticity study population: On-Label vs. Off-Label Drugs (including all spasticity indications)

Additionally, the cumulative failure rate (i.e., the estimated probability that a pump will have a product performance-related event by a given time point) is presented in table and graph formats for each of the sub-groups listed above.

3.4.3 Results

A total of 3,564 (30.2%) SynchroMed II pumps were classified as On-Label where there was no evidence of Off-Label drug/admixture exposure. A total of 8,222 (69.8%) pumps wereclassified as Off-Label where there was evidence of pump exposure to an Off-Label drug/admixture. There were a total of 433 reported SynchroMed II pump product performance events during the study observation period. Of the 433 pump product performance events, 430 of those were the first event and included as failures in the survival analysis. In addition to the 430 pump failures, there were 15 SynchroMed II pumps explanted due to normal battery depletion by the physician, which were returned to Medtronic and had an RPA observation of high battery resistance. For this analysis, these pumps were not considered failures, because they represented normal implant duration (ranging from 5.6 to 6.8 years) with no associated physician or patient complaint.

Three of the 433 pump failure events occurred in pumps with no drug records available. Of the remaining 430 SynchroMed II pump failures, 231 were classified as pump failure due to motor stall (with or without documented motor corrosion). The remaining pump failures were due to events such as inconsistent pump reservoir volume, overinfusion, corrosion and/or gear wear, device malfunction, reduced battery performance, pump underinfusion, and other non-conforming reasons. Overall, the rate of pump failures in this cohort was 3.6% (430/11,786) with a median follow-up of 33.0 months.

For the 231 pump failures due to motor stall, 99 of the events were associated with the patient presenting clinical signs or symptoms of possible drug withdrawal or increasing pain or spasticity. The other 132 events had no patient reported signs or symptoms associated with the event but had a physician report of a motor stall occurrence.

Table 3.17: Targeted Drug Delivery Primary Indications by On/Off-Label Pump Groups

Primary Indication[a]	On-Label N=3564	Off-Label N=8222
Non-Malignant Pain	1026 (14.2%)	6212 (85.8%)
Malignant Pain	47 (2.9%)	1557 (97.1%)
Spasticity	2491 (90.7%)	255 (9.3%)
Multiple/Unknown	0 (0.0%)	198 (100%)

[a] For approved indications refer to product labeling for your geography.

3.4.3.1 Total Study Population

A total of 3,564 SynchroMed II pumps were classified as On-Label for all therapies, where there was no evidence of Off-Label drug/admixture exposure. A total of 8,222 pumps were classified as Off-Label where there was evidence of pump exposure to an Off-Label drug/admixture. The cumulative survival and failure of the SynchroMed II pump for all indications, stratified by the On- Label or Off-Label pump group, are shown in Figure 3.5 and Figure 3.6 respectively.

3.4.3.3 Spasticity Study Population

A total of 2,491 SynchroMed II pumps were classified as On-Label for spasticity therapies, where there was no evidence of Off-Label drug/admixture exposure. A total of 255 pumps were classified as Off-Label where there was evidence of pump exposure to an Off-Label drug/admixture. The cumulative survival and failure of the SynchroMed II pump for spasticity indications, stratified by the On-Label or Off-Label pump group, are shown in Figure 3.9 and Figure 3.10 respectively.

3.4.4 Overall Summary and Limitations

- Pump failures have been observed in pumps with both On-Label and Off-Label medications used for all indications over the follow-up period.
- Among pre-enhanced devices (n = 7,593), Off-Label medication exposure is associated with an overall 2.6 times greater risk of pump failures (95% confidence interval [1.963, 3.367]) compared to On-Label medication exposure for the entire pump population. The rate of pump failure accelerates in the Off-Label group after 48 months of follow-up. At 81 months of follow-up the survival from pump failure for On-Label pumps was 91.9% compared to a survival of 81.7% for Off-Label pumps.
- Among fully enhanced devices (n = 3,583), Off-Label medication exposure is associated with an overall 1.4 times greater risk of pump failures (95% confidence interval [0.384, 5.075]) compared to On-Label medication exposure for the entire pump population. At 6 years of follow-up the survival from pump failure for On-Label pumps was 99.1% compared to a survival of 99.4% for Off-Label pumps.
- The data represent the reported registry experience with a median follow-up time of 34.7 months for pre-enhanced devices and 19.8 months for fully enhanced devices. The longer-term data are based on a lower number of pumps and are subject to change as more follow-up data are obtained via the registry. Survival curve truncation or plateaus do not imply that the implanted devices will not be adversely impacted beyond the time points of the current data.
- The On-Label pump group for all devices (pre-enhanced and fully enhanced) was comprised of 69.9% of pumps with Spasticity as the indication (2,491/2,746 total spasticity pumps vs. 1,073/8,842 total pain pumps: Spasticity versus Pain pumps respectively). While the Off-Label group consisted of 94.5% of pumps with pain indications (7,769 vs. 255: Pain versus Spasticity pumps respectively).

- Medication use was recorded as a snapshot at the time of follow-up. It is possible that some On-Label pumps received Off-Label medications in between follow-up periods. In addition, it is possible that some pumps designated as On-Label received compounded formulation of an On-Label equivalent but was not designated as such in the registry database. The time a pump was exposed to an Off-Label medication was not assessed. It is possible that some Off-Label pumps were exposed only for a brief period of time (e.g. < 6 months).
- The risk of pump failure by type of Off-Label drug was not assessed. Many Off-Label pumps were exposed to multiple medications over the life span of the pump. This limits the ability to associate a specific drug, compounded drug, drug concentration, or drug combination with increased pump failure risk.

3.5 Catheters

From August 7, 2003, to the report cut-off date of October 31, 2024, there were 12,199 catheters followed in the registry. The total number of catheters was not equal to the total number of pumps (n=13,848) because patients may have undergone pump replacements but used the same catheters, or patients may have been implanted with Medtronic pumps and non-Medtronic catheters which were not registered with Medtronic Device And Registrant Tracking (DART) system. The use of a non-Medtronic catheter with a Medtronic pump is considered off-label. The aggregate prospective follow-up time for all catheters was 473,340 months (39,445 years). Table 3.24 provides the number and percentage of catheters by model.

Table 3.24: Targeted Drug Delivery Catheter Counts by Model

Model Name	N (%)
Currently Manufactured[a]	**3495 (28.6%)**
8780 (US & OUS)	1659 (13.6%)
8781 (US & OUS)	1552 (12.7%)

Grafted Not As Designed[e]	521 (4.3%)
No Longer Manufactured	**5425 (44.5%)**
8709	2925 (24%)
8709SC	1110 (9.1%)
8711	665 (5.5%)
8731	538 (4.4%)
8703W	187 (1.5%)
Other/Unspecified	**463 (3.8%)**

Model Name	N (%)
Total	**12199 (100%)**

[a] Manufactured for designated region; US=United States; OUS=Outside United States.

[b] 8731 catheters repaired with an 8596 proximal or 8598 distal revision kit.

[c] Medtronic non-Ascenda catheters repaired with a Medtronic revision kit, but not for the model it was intended.

[d] 8780 or 8781 Ascenda catheters repaired with the 8782 or 8784 revision kit.

[e] Catheters that involve the ad-hoc assembly of components other than a Medtronic repair kit or brand-new catheter.

3.5.1 Catheter Events

There were 1,876 product performance-related events with an underlying reported etiology related to catheter function. This includes 1,862 events with a catheter etiology and 14 events with both a catheter and other etiology (including device and non-device etiologies). The majority of the events were catheter occlusion (n=531), catheter dislodgement (n=424), catheter kink (n=277), or catheter break/cut (n=271). Of the 1,876 events, 1,599 were the initial product performance event that affected catheter survival estimates.

The catheter product performance-related events are summarized by model in the catheter models section.

For the purposes of survival analysis, a device's follow-up time is cut off for one of three reasons: 1) the occurrence of a product performance-related event; 2) the occurrence of a censoring event; or 3) the device is event-free and censored at the patient's last follow-up prior to the data cut-off. For catheters:

- 1,599 had follow-up time cut-off due to product performance-related events.
- 8,577 were censored in the survival analysis for the following reasons: patient expired, catheter explanted/capped, site termination, patient discontinued, patient lost to follow-up, or therapy suspended.
- 2,023 were free from product performance-related events and censoring events, and were censored at the last follow-up visit prior to the report cut-off.

3.5.2 Catheter Models

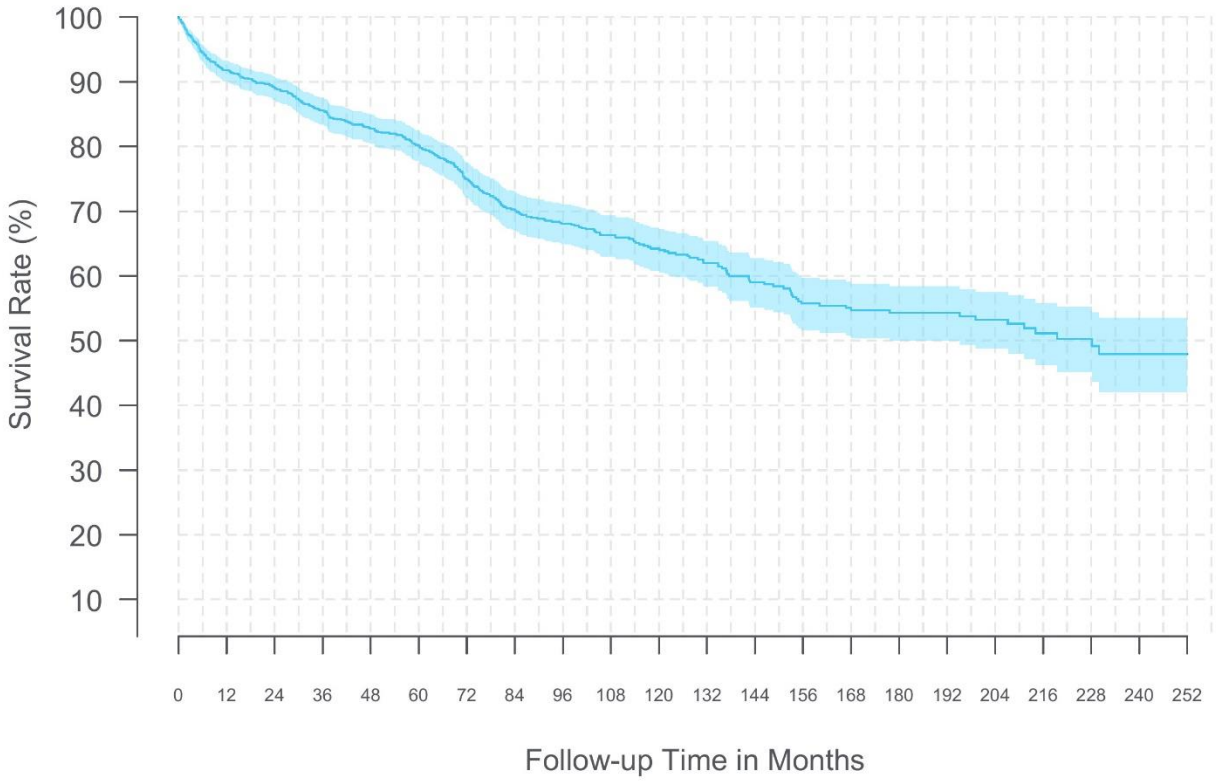
The figures and tables below represent catheter survival and 95% confidence intervals where at least 20 catheters contributed to each 3-month interval. Survival curves are only shown if more than 20 devices had at least 12 months of follow-up at the time of the report cut-off for each model.

Medtronic catheter repair kits and 2-piece catheters include specially designed connector pins and strain relief sleeves to splice the catheter segments together. Catheters grafted not as designed,

by definition, involve the ad-hoc assembly of components other than those from a Medtronic repair kit or brand-new catheter. Medtronic recommends that clinicians follow the labeling for the catheter revision kits.

3.5.2.1 Model 8709

Model/Name	8709/InDura
FDA Approval Date	May 1998
Catheters Enrolled	2,925
Catheters Currently Active in Study	92
Initial Product Performance Events	366
Median Follow-up Time (Months)	18.0
Cumulative Follow-up Time (Months)	102,675



Time Interval	1 Year	2 Years	3 Years	4 Years	5 Years
Survival (95% CI)	91.8% (90.1%, 93.3%)	89.1% (87.1%, 90.8%)	85.6% (83.4%, 87.5%)	82.8% (80.4%, 84.9%)	80.1% (77.6%, 82.4%)
Sample Size	996	943	876	781	670

Time Interval	6 Years	7 Years	8 Years	9 Years	10 Years
Survival (95% CI)	75.0% (72.1%, 77.6%)	70.3% (67.2%, 73.1%)	68.1% (64.9%, 71.0%)	66.3% (63.0%, 69.4%)	64.2% (60.8%, 67.5%)
Sample Size	577	505	422	338	286

Time Interval	11 Years	12 Years	13 Years	14 Years	15 Years
Survival (95% CI)	62.0% (58.4%, 65.4%)	59.0% (55.1%, 62.7%)	55.7% (51.5%, 59.7%)	54.7% (50.4%, 58.8%)	54.3% (50.0%, 58.4%)
Sample Size	232	185	163	150	137

Time Interval	16 Years	17 Years	18 Years	19 Years	20 Years

4 Spinal Cord Stimulation Systems

4.1 Study Participants

4.1.1 Centers

The spinal cord stimulation tables and graphs were generated based on data collected between June 2004 and the report cut-off date of October 31, 2024. Eighty-seven centers, in North America, Europe and South America, enrolled patients and contributed patient data to the Spinal Cord Stimulation Systems section of this report. Figure 4.1 shows a World Map and highlights the countries that enrolled spinal cord stimulation patients.

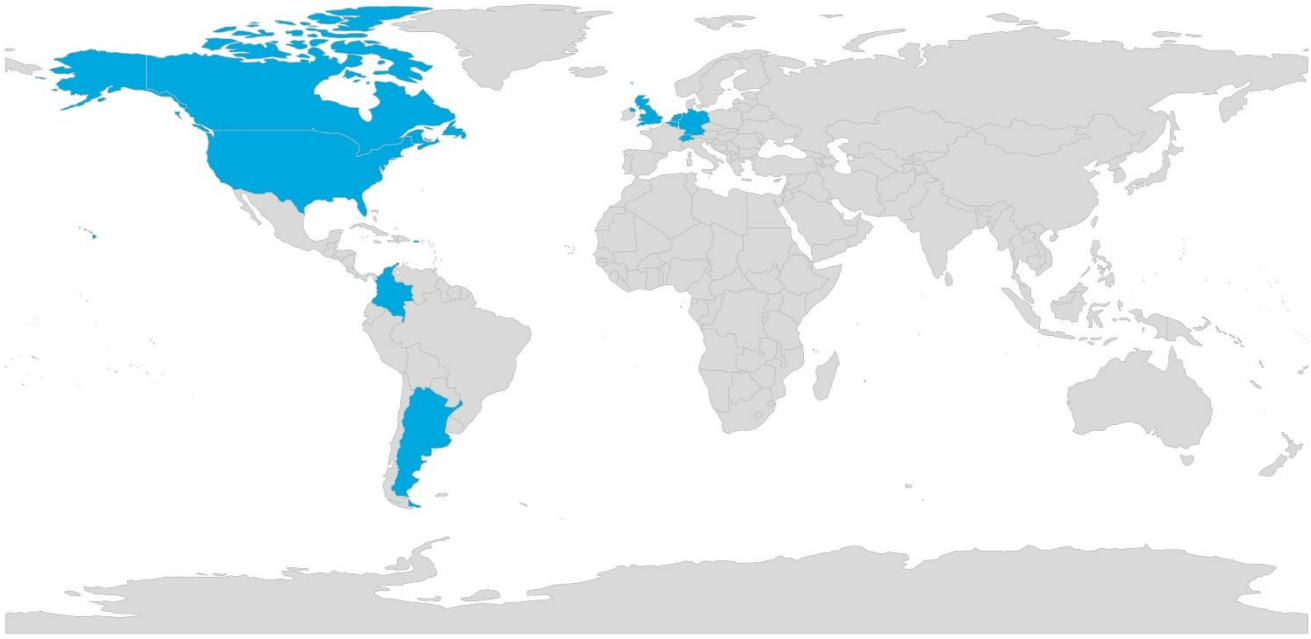

Figure 4.1: Countries with Spinal Cord Stimulation Patients in Registry (Highlighted)

4.1.2 Patients

Of the 6,791 spinal cord stimulation patients enrolled, 44.8% were implanted for the treatment of chronic back and leg pain, 26.2% were implanted for the treatment of other primary indications, 18.3% were implanted for the treatment of trunk and limb pain, 10.0% were implanted for the treatment of complex regional pain syndrome (CRPS), and 0.7% were implanted for indications that were not specified in the database (see Figure 4.2 and Table 4.1).

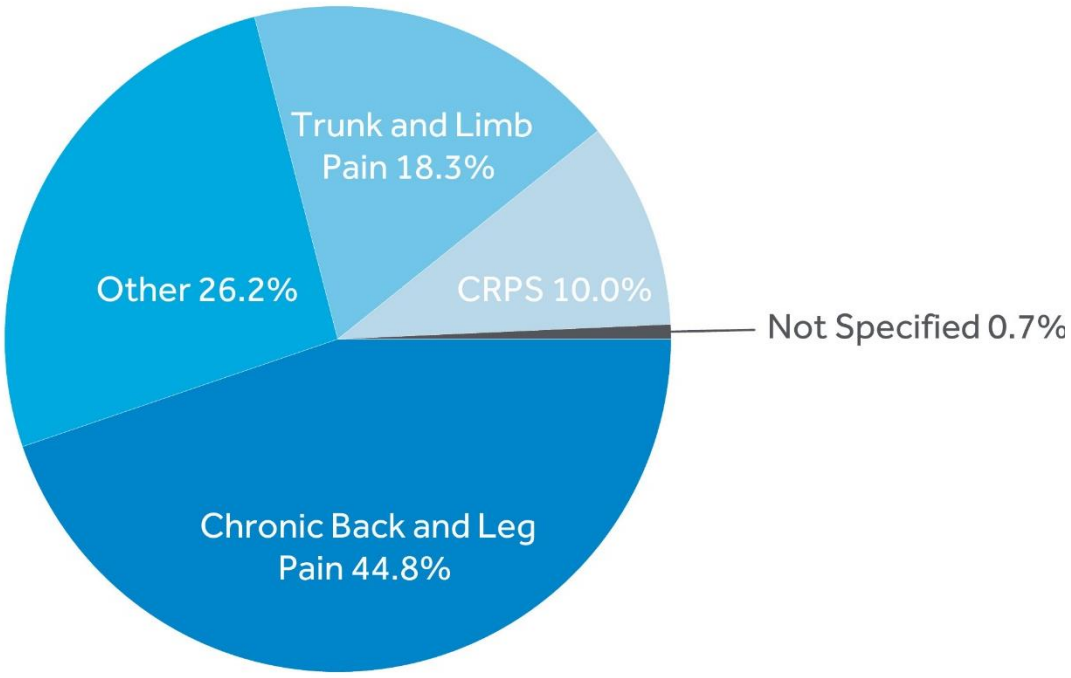

Figure 4.2: Spinal Cord Stimulation Primary Treatment Indications

Table 4.1: Spinal Cord Stimulation Primary Treatment Indications

Primary Treatment Indication[a]	Enrolled Patients (%)
Chronic Back and Leg Pain	**3040 (44.8%)**
Post Surgical Back and/or Leg Pain[b]	2254 (33.2%)
Combination Back and Leg Pain	764 (11.3%)
Arachnoiditis	22 (0.3%)
Other Primary Indication	**1780 (26.2%)**
Other Chronic Pain	888 (13.1%)
Cervical Pain	107 (1.6%)
Chronic Cluster Headache	78 (1.1%)
Diabetic Neuropathy	67 (1.0%)
Traumatic Nerve Injury	63 (0.9%)

Primary Treatment Indication[a]	Enrolled Patients (%)
Post Herpetic Neuralgia	19 (0.3%)
Facial Pain	16 (0.2%)
Angina	12 (0.2%)
Epidural Fibrosis	4 (0.1%)
Post Herniorrhaphy Pain	3 (<0.1%)
Other	523 (7.7%)
Trunk and Limb Pain	**1241 (18.3%)**
Radicular Pain Syndrome	929 (13.7%)
Degenerative Disc Disease	312 (4.6%)
CRPS	**682 (10.0%)**
CRPS I	530 (7.8%)
CRPS II	152 (2.2%)
Not Specified	48 (0.7%)
Total Patients	**6791 (100%)**

[a] For approved indications refer to product labeling for your geography.
[b] Contains Failed Back Surgery Syndrome (FBSS), Post Laminectomy Pain, Multiple Back Operation, and Unsuccessful Disc Surgery.

It is recognized that health care providers prescribe therapies to meet specific patient needs; however, Medtronic only directs the use of its products based on approved labeling. Product labeling varies by geography. Contact a local Medtronic representative (http://www.medtronic.com/us-en/about/locations.html) for region-specific product labeling.

4.2 Event Summary

There were 2,190 product performance events reported between June 2004 and October 31, 2024, in 1,060 patients with spinal cord stimulation systems. These events represent 35.8% of the total reported events (2,190/6,114), occurred in 1,060 (15.6%) of the 6,791 total patients enrolled, and are presented graphically within this report (e.g. events per patient years as well as survival curves). In addition, there were 3,837 non-product performance events that were collected to understand patient experience

(clinical signs and symptoms) with the spinal cord stimulation systems. As an ongoing registry, events not coded at the time of the data snapshot (waiting on further information) will be included in future reports (n=87).

Any registry devices that are returned to Medtronic are analyzed via a Returned Product Analysis (RPA) process. If available, RPA findings assist in the classification of the events. Within this report, Table 4.2 differentiates the events by those determined by the RPA process versus those determined by the physician. Please refer to the Methodology section for more information.

There were 314 deaths reported for patients followed in the PSR with spinal cord stimulation systems, none of which were reported as a direct result of a product performance event.

4.2.1 Product Performance Events

Table 4.2: Spinal Cord Stimulation System Product Performance Events

Product Performance Events[a]	Event Counts	Events Per 100 Patient Years	Patients with Events (%) N=6791[b]
Total	**2,190**	**11.4**	**1060 (15.6%)**

[a] Medical Dictionary for Regulatory Activities (MedDRA) Lower-Level Term or Medtronic's coding system term for events that do not exist in the MedDRA dictionary.

[b] The total number of patients with events may not represent the sum of all rows, as a patient may have experienced more than one type of event.

[c] Consists of events with one count each.

[d] There were 4,638 patients that used rechargeable SCS neurostimulators in the registry. A total of 2.5% (114/4,638) of patients with a rechargeable SCS neurostimulator experienced a neurostimulator unable to recharge event.

[e] Includes recharging components, charging and other technical related issues.

[f] Includes product performance events that were reported as adverse events rather than device events (e.g. Device Stimulation Issue, Pain, and Medical Device Site Erosion).

[g] Includes external components.

[h] Includes a combination of mechanical and electrical observations.

[i] Device failure includes 3 events for lead failure, and 1 extension failure.

[j] Device stimulation issue reported by physician as being caused by lead (n=2) and neurostimulator (n=1).

A total of 1,570 (71.7%) of the 2,190 product performance events were related to the Lead only, 127 (5.8%) were related to the Neurostimulator only, 51 (2.3%) were related to the Extension only, 59 (2.7%) were related to Multiple Etiologies (which includes events where at least one device and one non-device etiology was indicated), and 383 (17.5%) were related to Other Etiologies, including: 304 (13.9%) were related to other component, 38 (1.7%) were related to recharging process, 15 (0.7%) were related to programming/stimulation, 13 (0.6%) were related to incisional site/device tract, 7 (0.3%) were related to surgery/anesthesia, 1 (<0.1%) was related to MRI, and 5 (0.2%) were related to other etiology. Relatedness is determined by the physician.

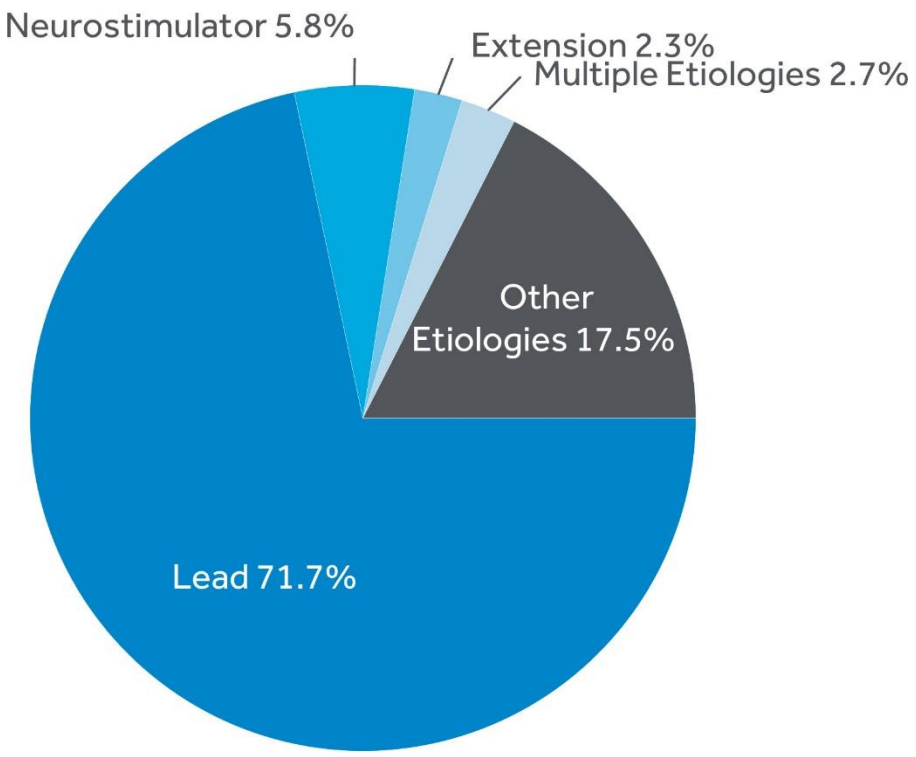

Figure 4.3: Spinal Cord Stimulation System Product Performance Events by Relatedness

Table 4.3 and Table 4.4 describe the interventions taken for reported impedance events. In 28.1% and 21.4% of the high and low impedance events, respectively, the action taken was a surgical intervention. However, impedance could be used as a diagnostic measurement and may not result in any intervention or clinical impact. The majority of events required no intervention or device reprogramming only (69.4% for high impedance and 76.8% for low impedance).

Table 4.3: Spinal Cord Stimulation System High Impedance Events by Intervention

Intervention	N (%) of High Impedance Events
Reprogramming	251 (44.11%)
Device Surgical Intervention	158 (27.77%)
Therapy Suspension	8 (1.41%)
Other Intervention	6 (1.05%)
Other Surgical Intervention	2 (0.35%)
No Action Taken	144 (25.31%)
Total	**569 (100.0%)**

Table 4.4: Spinal Cord Stimulation System Low Impedance Events by Intervention

Intervention	N (%) of Low Impedance Events
Reprogramming	26 (46.4%)
Device Surgical Intervention	11 (19.6%)
Other Intervention	1 (1.8%)
Other Surgical Intervention	1 (1.8%)
No Action Taken	17 (30.4%)
Total	**56 (100.0%)**

Table 4.5 describes the interventions taken for reported lead migration/dislodgement events; 77.5% of them led to a surgical intervention, and 11.3% led to reprogramming.

Table 4.5: Spinal Cord Stimulation System Lead Migration/Dislodgement Events by Intervention

Intervention	N (%) of Lead Migration/Dislodgement Events
Device Surgical Intervention	634 (72.3%)
Reprogramming	99 (11.3%)
Other Surgical Intervention	46 (5.2%)
Therapy Suspension	19 (2.2%)
Other Intervention	15 (1.7%)
Medical or Non-Surgical Therapy	3 (0.3%)
Medication	2 (0.2%)
No Action Taken	59 (6.7%)
Total	**877 (100.0%)**

Table 4.6 describes the interventions completed for product performance events that required action from the health care provider and thereby may have resulted in an incremental impact to the patient. Survival estimates presented in previous product performance reports included events where no action was taken. To present survival estimates that may better correlate with patient impact, events where no action was taken have been removed from the device survival estimates presented in this report.

The far-left column lists the top five reported product performance events (PPEs), and all other reported PPEs are listed under Other. The subsequent columns represent the actions taken by the reporting physician.

Table 4.6: Spinal Cord Stimulation System Product Performance Events by Intervention

Events by Intervention[a]	Surgical Intervention	Reprogramming	Medical or Non-Surgical Intervention	Therapy Suspension	Recharge	No Action Taken	Total Events

[a] Medical or Non-Surgical Therapy contains but is not limited to the following actions: medication adjustment based on disease symptoms, imaging (e.g. MRI or X-ray), other specialist referral.

[b] Other represents all reported PPEs that were not in the top five of occurrence.

4.2.2 Clinical Events Not Related To Product Performance

The clinical events not related to product performance are summarized if:

- The patient was enrolled in the PSR since 2013, the year in which the clinical event collection was initiated (N=3,900)
- Categorized as serious adverse events (SAEs, N=153)
- Occurred with a System Organ Class (SOC) threshold ≥1% of patients
- Other Considerations
  - Some events are described in high level group terms (HLGT) to provide more specificity, if needed
  - Some therapies will provide therapy relevant events

Table 4.7: Spinal Cord Stimulation System Clinically Relevant Serious Adverse Events

Event Type	Number of SAE	Patients with SAE n (%) N=3900	SAE Per 100 Patient Months	Patients with SAE Requiring Surgical Intervention n (%) N=3900

Total	**153**	**124 (3.2%)**	**0.12**	**88 (2.3%)**

[a] Composed of high level group term event codes with fewer than 5 events each.

4.2.3 Patient Deaths

In earlier versions of the protocol, deaths were only assessed for the relatedness to the device product performance. After 2010, death assessments were expanded to also include the relationship to the implant procedure and/or therapy. As of the report cut-off, a total of 314 patients in the registry had expired. No deaths were reported as a direct result of a product performance event.

Since 2006, a total of 97 (30.9%) deaths have been reported in this patient registry study based upon patients receiving therapy for post-surgical back and/or leg pain, 61 (19.4%) for other chronic pain, 42 (13.4%) for radicular pain syndrome, 40 (12.7%) for combination back and leg pain, 19 (6.1%) for CRPS I, 14 (4.5%) for degenerative disc disease, 3 (1.0%) for CRPS II, 3 (1.0%) for diabetic neuropathy, 3 (1.0%) for post herpetic neuralgia, 2 (0.6%) for traumatic nerve injury, 1 (0.3%) for angina, 1 (0.3%) for cervical pain, 1 (0.3%) for chronic cluster headache, and 27 (8.6%) for other indications. The percentage is based upon the total patient death events and not based upon the rate of occurrence. **All tables depicted without a patient denominator should not be interpreted using other numbers within this report to calculate event rates**.

Table 4.8: Spinal Cord Stimulation System Patient Deaths by Primary Indication

Number of Reports of Death by Primary Indication[a]	N (%) of Deaths
Post Surgical Back and/or Leg Pain[b]	97 (30.9%)
Other Chronic Pain	61 (19.4%)
Radicular Pain Syndrome	42 (13.4%)

Number of Reports of Death by Primary Indication[a]	N (%) of Deaths
Combination Back and Leg Pain	40 (12.7%)
CRPS I	19 (6.1%)
Degenerative Disc Disease	14 (4.5%)
CRPS II	3 (1.0%)
Diabetic Neuropathy	3 (1.0%)
Post Herpetic Neuralgia	3 (1.0%)
Traumatic Nerve Injury	2 (0.6%)
Angina	1 (0.3%)
Cervical Pain	1 (0.3%)
Chronic Cluster Headache	1 (0.3%)
Other[c]	27 (8.6%)
Total	**314 (100%)**

[a] For approved indications refer to product labeling for your geography.

[b] Contains Failed Back Surgery Syndrome (FBSS), Post Laminectomy Pain and Multiple Back Operations.

[c] Includes specific free-text entries of the following nature: Radiculopathy, Lumbosacral Neuritis, Peripheral Neuropathy, Occipital Neuralgia, Raynaud's Disease, Bilateral Lower Legs and Feet, Post Hemangioma Surgery Complication, Headache, Arteriopathie, Vascular Pain, Leg Pain after Accident.

4.3 Neurostimulators

From June 2004 to the report cut-off date of October 31, 2024, there were 7,529 neurostimulators followed in the registry. The difference between the total number of patients (n=6,791) versus neurostimulators is due to the fact that some patients were subsequently re-implanted. The aggregate prospective follow-up time for all spinal cord neurostimulators was 223,841 months (18,653 years). Table 4.9 provides the number and percentage of neurostimulators by model.

Table 4.9: Spinal Cord Stimulation Neurostimulator Counts by Model

Model Name	N (%)
Currently manufactured	**5801 (77.05%)**
Intellis with AdaptiveStim (97715)	1652 (21.9%)

Model Name	N (%)
RestorePrime (37701)	56 (0.7%)
Synergy Versitrel (7427V)	53 (0.7%)
SynergyPlus (7479)	17 (0.2%)
SynergyCompact (7479B)	7 (0.1%)
Other/Unspecified	**10 (0.1%)**
Total	**7529 (100%)**

4.3.1 Neurostimulator Events

There were 140 product performance-related events with an underlying reported etiology related to spinal cord neurostimulator function. This includes 127 events with a neurostimulator etiology and 13 events with both a neurostimulator and other etiology (including device and non-device etiologies). Of these, 107 were the initial product performance event that affected neurostimulator survival estimates. For spinal cord neurostimulators in the registry, the current return rate to Medtronic Returned Product Analysis (RPA) was 16.6% (401/2,420). The proportion was based upon the number of registry spinal cord neurostimulators received by RPA, divided by the sum of the total number of explanted devices and the total number of neurostimulators in patients who have expired. In the 140 spinal cord neurostimulator events, 97.9% (137/140) were assigned as device related by the physician, not returned to Medtronic RPA (see Table 4.10).

Table 4.10: Spinal Cord Stimulation Neurostimulator Product Performance Events by Determination

Product Performance Events	N (%)
RPA Determination	**3 (2.1%)**
Broken Bond Wire	1 (0.7%)
Medical Device Complication	1 (0.7%)
No Anomaly Found By RPA[a]	1 (0.7%)
Physician's Determination	**137 (97.9%)**
High Impedance	31 (22.1%)
Neurostimulator Unable To Recharge	31 (22.1%)
Device Malfunction	27 (19.3%)

Product Performance Events	N (%)
Lead Migration/Dislodgement	12 (8.6%)
Device Charging Issue	5 (3.6%)
Neurostimulator Migration	5 (3.6%)
Unspecified	4 (2.9%)
Device Overheating	3 (2.1%)
Low Impedance	3 (2.1%)
Device Breakage	2 (1.4%)
Neurostimulator Inversion	2 (1.4%)
Premature Battery Depletion	2 (1.4%)
Device Battery Issue	1 (0.7%)
Device Connection Issue	1 (0.7%)
Device Electrical Impedance Issue	1 (0.7%)
Device Image Display Error	1 (0.7%)
Device Issue	1 (0.7%)
Device Stimulation Issue	1 (0.7%)
Device Telemetry Issue	1 (0.7%)
Extension Migration	1 (0.7%)
Internal Device Exposed	1 (0.7%)
Medical Device Site Warmth	1 (0.7%)
Total	**140 (100%)**

[a] The physician's determination for this event was Neurostimulator Unable to Recharge

For the purposes of survival analysis, a device's follow-up time is cut-off for one of three reasons: 1) the occurrence of a product performance-related event; 2) the occurrence of a censoring event; or 3) the device is event-free and censored at the patient's last follow-up prior to the data cut-off. For neurostimulators:

- 107 had follow-up time cut-off due to product performance-related events.
- 5,955 were censored in the survival analysis for the following reasons: patient expired, neurostimulator explanted, patient discontinued, therapy

suspended, or site discontinued participation in the registry.

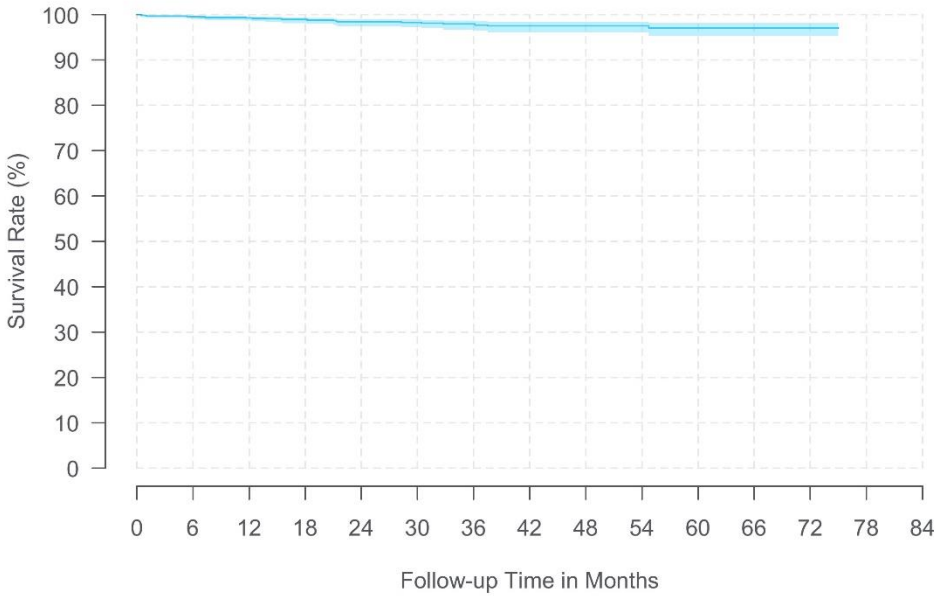
- 1,467 were free from product performance-related events and censoring events, and were censored at the last follow-up visit prior to the report cut-off.

4.3.2 Neurostimulator Models

The following figures and tables represent spinal cord neurostimulator survival and 95% confidence intervals where at least 20 spinal cord neurostimulators contributed to each 3-month interval.

4.3.2.1 Model Intellis with AdaptiveStim

Model Name	Intellis with AdaptiveStim (model 97715)
FDA Approval Date	September 2017
Neurostimulators Enrolled	1,652
Neurostimulators Currently Active in Study	984
Initial Product Performance Events	23
Median Follow-up Time (Months)	21.0
Cumulative Follow-up Time (Months)	42,213



Time Interval	1 Year	2 Years	3 Years	4 Years	5 Years
Survival (95% CI)	99.3% (98.7%, 99.6%)	98.4% (97.5%, 99.0%)	97.9% (96.8%, 98.7%)	97.5% (96.1%, 98.4%)	97.1% (95.3%, 98.2%)
Sample Size	1064	731	482	309	150

Time Interval	6 Years	At 75 Months
Survival (95% CI)	97.1% (95.3%, 98.2%)	97.1% (95.3%, 98.2%)
Sample Size	33	24

Specification: Intellis with	
Height	57.1mm (2.2in)
Width	47.2mm (1.9in)
Thickness Case	6.3 mm (0.2 in)
Thickness Connector	9.1 mm (0.4 in)
Volume	13.9 cc
Battery Type	Rechargeable
Expected Battery Life	9 years before ERI
Maximum Electrodes	16
Amplitude	0 - 100 mA
Rate Range	40 - 1200 Hz
Pulse Width	60 - 1000 µsec
Groups	1 - 3
Programs	12
Implant	≤3 cm

Neurostimulator Event Summary: Intellis with AdaptiveStim	N

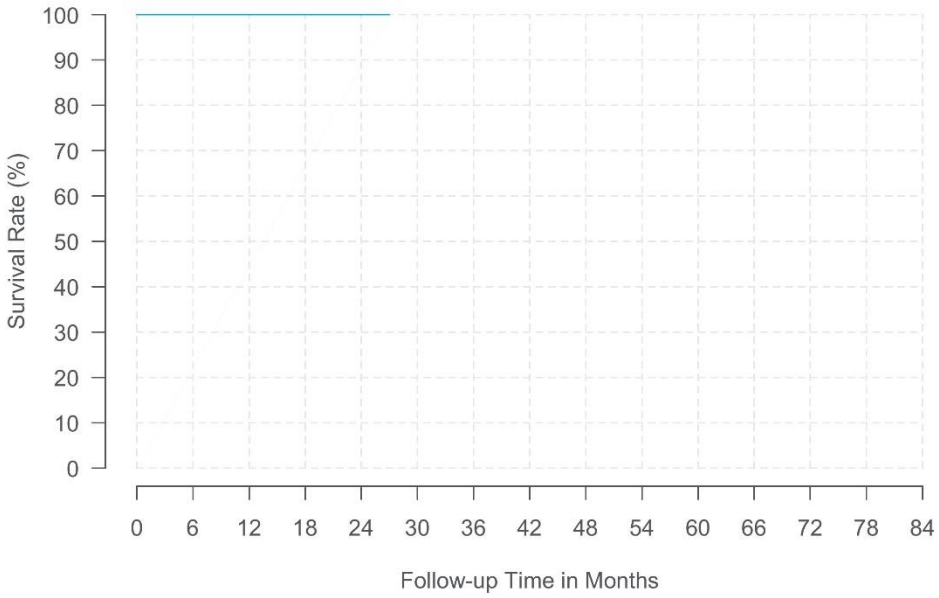
Total	**23**

4.3.2.2 Model Intellis LT

Model Name	Intellis LT (model 97716)
FDA Approval Date	July 2017
Neurostimulators Enrolled	44
Neurostimulators Currently Active in Study	30
Initial Product Performance Events	0
Median Follow-up Time (Months)	25.4
Cumulative Follow-up Time (Months)	980



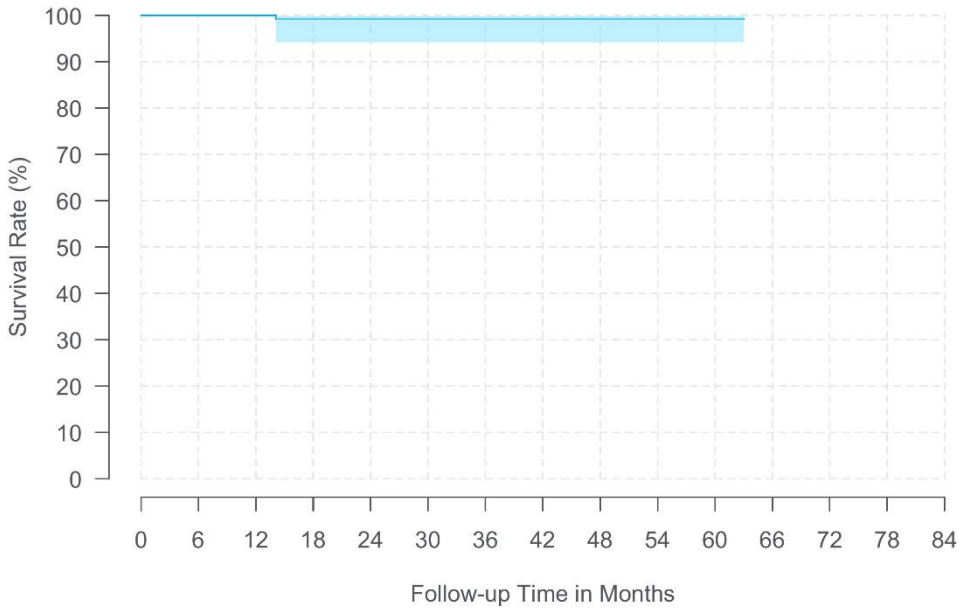
Time Interval	1 Year	2 Years	At 27 Months
Survival (95% CI)	100.0% (NA)	100.0% (NA)	100.0% (NA)
Sample Size	29	23	20

Specification: Intellis LT	
Height	57.1mm (2.2in)
Width	47.2mm (1.9in)
Thickness Case	6.3 mm (0.2 in)
Thickness Connector	9.1 mm (0.4 in)
Volume	13.9 cc
Battery Type	Rechargeable
Expected Battery Life	9 years before ERI
Maximum Electrodes	16
Amplitude	0 - 100 mA
Rate Range	40 - 1200 Hz
Pulse Width	60 - 1000 µsec
Groups	1 - 3
Programs	12
Implant	≤3 cm

Neurostimulator Event Summary: Intellis LT	Total
N	**0**

4.3.2.3 Model Itrel 4

Model Name	Itrel 4 (model 37703)
FDA Approval Date	May 2012
Neurostimulators Enrolled	139
Neurostimulators Currently Active in Study	26
Initial Product Performance Events	1
Median Follow-up Time (Months)	35.8
Cumulative Follow-up Time (Months)	5,517



Time Interval	1 Year	2 Years	3 Years	4 Years	5 Years
Survival (95% CI)	100.0% (NA)	99.2% (94.3%, 99.9%)	99.2% (94.3%, 99.9%)	99.2% (94.3%, 99.9%)	99.2% (94.3%, 99.9%)
Sample Size	124	92	68	47	28

Time Interval	At 63 Months
Survival (95% CI)	99.2% (94.3%, 99.9%)
Sample Size	24

Specification: Itrel 4	
Height	2.2 in (55 mm)
Width	2.4 in (60 mm)
Thickness	0.4 in (11 mm)
Volume	28 cc
Battery type	Non-Rechargeable
Expected Battery life	Depends on settings and use
Maximum Electrodes	4
Amplitude	0 - 10.5 V
Rate	2 - 130 Hz
Pulse Width	60 - 450 µsec
Groups	1
Programs	1
Implant Depth	≤ 4 cm

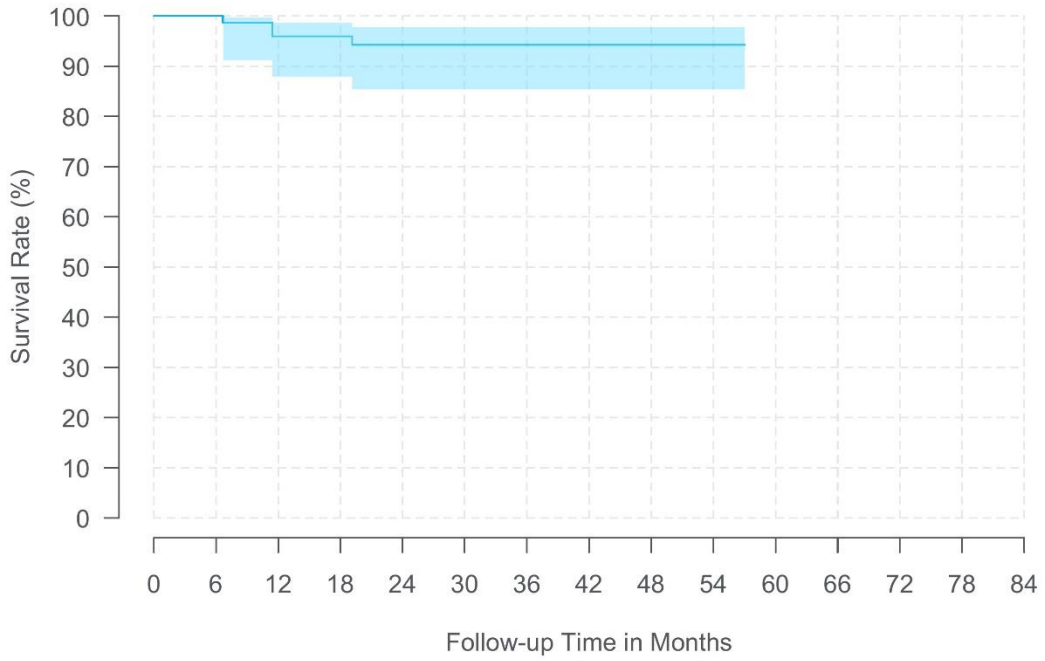
4.3.2.10 Model RestoreUltra SureScan MRI

Model Name	RestoreUltra SureScan MRI (model 97712)
FDA Approval Date	March 2013
Neurostimulators Enrolled	93
Neurostimulators Currently Active in Study	15
Initial Product Performance Events	4
Median Follow-up Time (Months)	28.5
Cumulative Follow-up Time (Months)	3,395



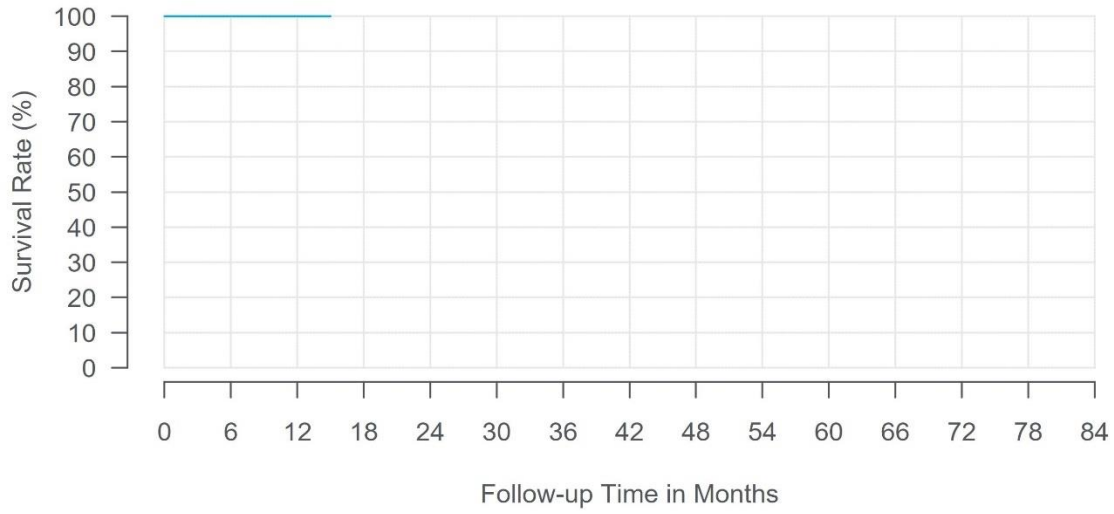
Time Interval	1 Year	2 Years	3 Years	4 Years	At 57 Months
Survival (95% CI)	95.9% (87.9%, 98.7%)	94.3% (85.4%, 97.8%)	94.3% (85.4%, 97.8%)	94.3% (85.4%, 97.8%)	94.3% (85.4%, 97.8%)
Sample Size	66	50	41	28	20

Specification: RestoreUltra SureScan MRI	
Height	2.1 in (54 mm)
Width	2.1 in (54 mm)
Thickness	0.4 in (10 mm)
Volume	22 cc
Battery type	Rechargeable
Expected Battery life	9 years
Maximum Electrodes	16
Amplitude	0 - 10.5 V
Rate	2 - 1200 Hz
Pulse Width	60 - 1000 µsec
Groups	8
Programs	16
Implant Depth	≤ 1 cm

Neurostimulator Event Summary: RestoreUltra SureScan MRI	N
Neurostimulator Unable To Recharge	2
Extension Migration	1
No Anomaly Found By RPA	1
Total	**4**

4.3.2.11 Model Vanta

Model Name	Vanta (model 977006)
FDA Approval Date	June 2021
Neurostimulators Enrolled	129
Neurostimulators Currently Active in Study	109
Initial Product Performance Events	0
Median Follow-up Time (Months)	6.7
Cumulative Follow-up Time (Months)	1035



Time Interval	1 Year	At 15 Months
Survival (95% CI)	100.0% (NA)	100.0% (NA)
Sample Size	42	23

As of October 31, 2024, there were no product performance events reported among Vanta neurostimulators.

Specification: Vanta with Adaptive Stim	
Height	68 mm (2.7in)
Width	51 mm (2.0in)
Thickness Case	11 mm (0.43in)
Thickness Connector	13 mm (0.51 in)
Volume	33 cc
Battery Type	Non- Rechargeable
Expected Battery Life	Up to 11 years
Maximum Electrodes	16
Amplitude	0 - 100 mA
Rate Range	40 - 130 Hz
Pulse Width	60 - 450 µsec
Groups	8
Programs	32
Implant Depth	≤4 cm

4.3.2.12 Model Inceptiv

Model Name	Inceptiv (model 977119)
FDA Approval Date	April 2024
Neurostimulators Enrolled	46
Neurostimulators Currently Active in Study	45
Initial Product Performance Events	0
Median Follow-up Time (Months)	0.0
Cumulative Follow-up Time (Months)	48

As of October 31, 2024, there was not sufficient data available to evaluate Inceptiv survival.

Specification: Inceptiv	
Height	2.2 in (57 mm)
Width	1.9 in (27 mm)
Thickness Case	0.2 in (6 mm)
Thickness Connector	0.4 in (9 mm)
Volume	13.77 cc
Battery type	Rechargeable
Expected Battery life	15 years before ERI
Maximum Electrodes	16
Amplitude	0 – 100 mA
Rate	2 - 1200 Hz
Pulse Width	60 - 1000 µsec
Groups	8
Programs	32
Implant Depth	≤ 3 cm

As of October 31, 2024, there were no product performance events reported among Inceptiv neurostimulators.

4.3.3 Neurostimulator Summary

Table 4.11: Spinal Cord Stimulation Primary Cell Neurostimulator Characteristics

Model Name	FDA Approval Date	Neurostimulators Enrolled	Neurostimulators Active	Initial Product Performance Events	Median Follow-up Time (Months)	Cumulative Follow-up Time (Months)

4.4 Leads

From June 2004 to the report cut-off date of October 31, 2024, there were 11,935 leads followed in the registry. The difference between the total number of leads (n=11,935) versus the number of neurostimulators (n=7,529) is due to the fact that some patients were subsequently re-implanted with a lead or were implanted with more than one lead. The aggregate prospective follow-up time for all leads was 395,649 months (32,971 years). A lead is a set of thin wires with a protective coating and electrodes near the tip (percutaneous lead) or on a paddle (surgical lead). Table 4.15 provides the number and percentage of leads by model.

Table 4.15: Spinal Cord Stimulation Lead Counts by Model

Model Name	N (%)
Currently manufactured	**10707 (90.0%)**
Vectris SureScan MRI 1x8 Compact (977A2)	5243 (43.9%)
1x8 Compact (3778)	2170 (18.2%)
Pisces Standard (3487A)	993 (8.3%)
1x8 Standard (3777)	840 (7.0%)
Pisces Plus (3888)	458 (3.8%)
Specify 5-6-5 (39565)	294 (2.5%)
Pisces Compact (3887)	202 (1.7%)
1x8 SC (3776)	188 (1.6%)
Vectris SureScan MRI 1x8 Subcompact (977A1)	147 (1.2%)
Specify SureScan MRI 5-6-5 (977C1)	94 (0.8%)
Specify SureScan MRI 2x8 (977C2)	46 (0.4%)
Specify 2x8 (39286)	32 (0.3%)
No longer manufactured	**690 (6.0%)**
Specify (3998)	158 (1.3%)
Pisces Z Standard (3890)	143 (1.2%)
Pisces Z Compact (3891)	132 (1.1%)

Model Name	N (%)
Resume TL (3986A)	108 (0.9%)
Resume II (3587A)	59 (0.5%)
2x4 Hinged Specify (3999)	54 (0.5%)
Pisces Z Plus (3892)	25 (0.2%)
On-Point (3987A)	9 (0.1%)
SymMix (3982A)	2 (<0.1%)
Other/Unspecified	**245 (2.1%)**
Total	**11935 (100.0%)**

Percutaneous leads composed 88.3% (10,541/11,935) of leads in the registry, including 45.2% (5,390/11,935) in the Vectris SureScan lead family, 26.8% (3,198/11,935) in the Pisces-Octad lead family, 13.9% (1653/11,935) in the Pisces-Quad lead family, and 2.5% (300/11,935) in the Pisces-Quad LZ lead family; 7.2% (856/11,935) of leads were surgical leads; and 4.5% (538/11,935)of leads were designated as "Other" or were unspecified in the database.

4.4.1 Lead Events

There were 1,602 product performance-related events with an underlying reported etiology related to lead function. This includes 1,570 events with a lead etiology only and 32 events with both a lead and other etiology (including device and non-device etiologies). Of these, 1,178 were the initial product performance event that affected lead survival estimates; the majority were lead migration/dislodgement (n=694), high impedance (n=284), lead fracture (n=88), unspecified (n=45), and low impedance (n=29). There were 1,075 events in 10,541 (10.2%) percutaneous leads, 49 events in 856 (5.7%) surgical leads, and 54 events occurred in leads with unknown/other model numbers.

For the purposes of survival analysis, a device's follow-up time is cut-off for one of three reasons: 1) the occurrence of a product performance-related event; 2) the occurrence of a censoring event; or 3) the device is event-free and censored at the patient's last follow-up prior to the data cut-off. For leads:

- 1,178 had follow-up time cut-off due to product performance-related events.
- 8,429 were censored in the survival analysis for the following reasons: patient expired, lead explanted, patient discontinued, therapy suspended, or site discontinued participation in the registry.

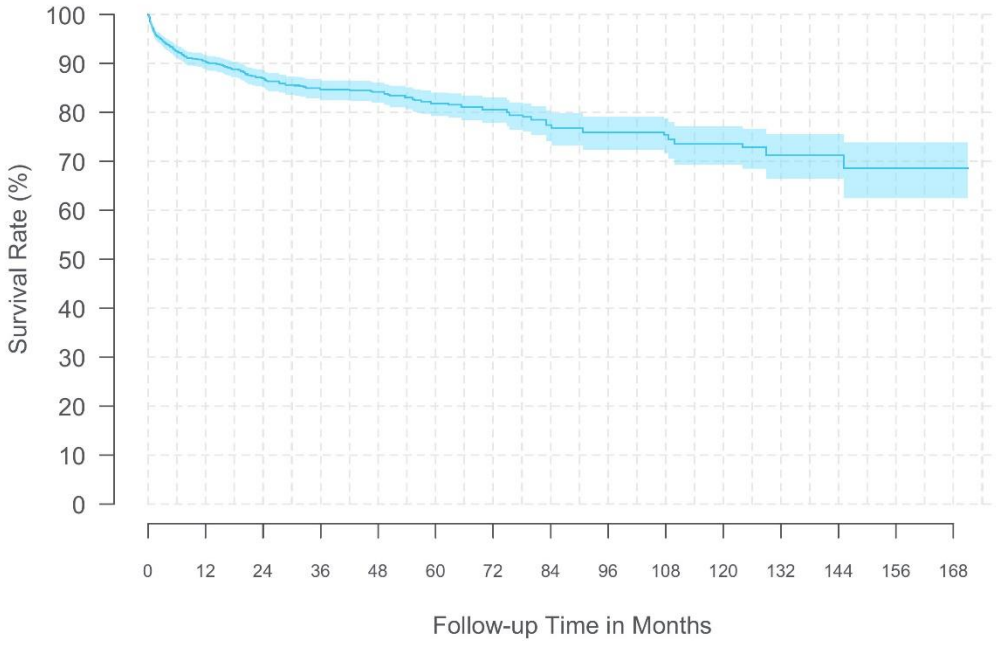
- 2,328 were free from product performance-related events and censoring events, and were censored at the last follow-up visit prior to the report cut-off.

4.4.2 Lead Models

The following figures and tables represent spinal cord stimulation lead survival and 95% confidence intervals where at least 20 spinal cord stimulation leads contributed to each 3-month interval.

4.4.2.1 Model 1x8 Compact

Model Name	1x8 Compact (model 3778)
FDA Approval Date	April 2005
Leads Enrolled	2,170
Leads Currently Active in Study	53
Initial Product Performance Events	267
Median Follow-up Time (Months)	17.9
Cumulative Follow-up Time (Months)	69,868



Time Interval	1 Year	2 Years	3 Years	4 Years	5 Years
Survival (95% CI)	90.4% (88.9%, 91.8%)	87.0% (85.2%, 88.7%)	84.7% (82.6%, 86.6%)	84.2% (82.0%, 86.1%)	81.8% (79.3%, 84.1%)
Sample Size	1212	801	600	458	379

Time Interval	6 Years	7 Years	8 Years	9 Years	10 Years
Survival (95% CI)	80.6% (77.9%, 83.0%)	77.5% (74.1%, 80.4%)	76.0% (72.4%, 79.2%)	75.5% (71.8%, 78.8%)	73.5% (69.4%, 77.2%)
Sample Size	292	219	178	157	126

Time Interval	11 Years	12 Years	13 Years	14 Years	At 171 Months
Survival (95% CI)	71.3% (66.4%, 75.6%)	71.3% (66.4%, 75.6%)	68.6% (62.5%, 73.9%)	68.6% (62.5%, 73.9%)	68.6% (62.5%, 73.9%)
Sample Size	83	55	38	24	24

Specification: 1x8 Compact	
Lead Type	Percutaneous
Lead	
Length (cm)	45, 60, 75
Diameter (mm)	1.3
Electrode	
Number	8
Shape	Cylindrical
Length (mm)	3.0
Individual Surface Area (mm^2)	12.0
Inter-Electrode Spacing: Edge to Edge (mm)	4.0

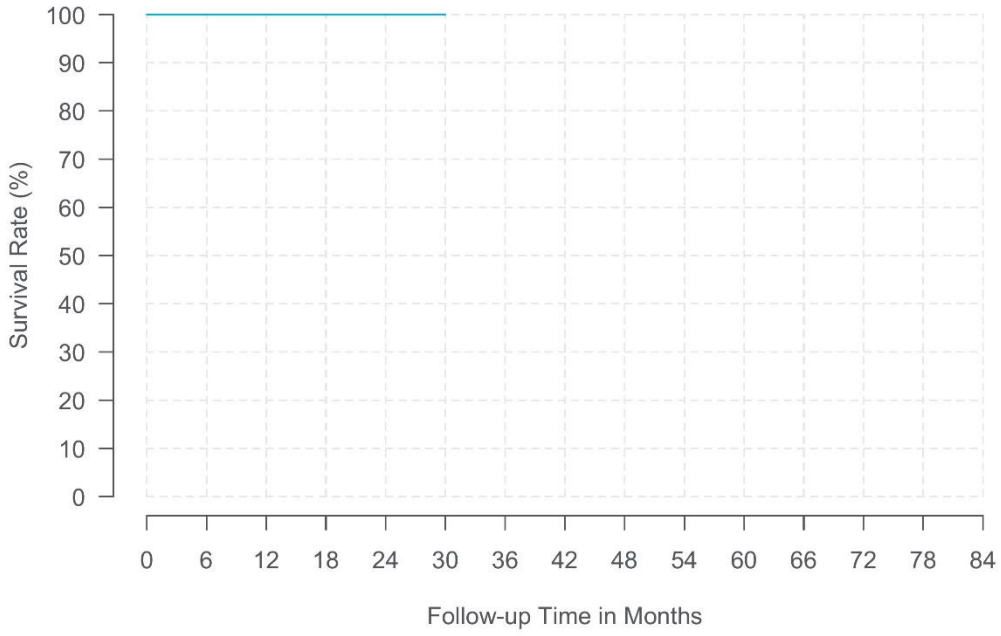
4.4.2.10 Model Specify SureScan MRI 5-6-5

Model Name	Specify SureScan MRI 5-6-5 (model 977C1)
FDA Approval Date	February 2016
Leads Enrolled	94
Leads Currently Active in Study	36
Initial Product Performance Events	3
Median Follow-up Time (Months)	12.2
Cumulative Follow-up Time (Months)	1,801



Time Interval	1 Year	2 Years	At 30 Months
Survival (95% CI)[a]	100.0% (NA)	100.0% (NA)	100.0% (NA)
Sample Size	48	26	21

[a]Devices with at least 1 day of follow-up in the registry are included in analysis. One lead had an event on the day of implant (follow-up time = 0), one lead had an event at 31 months post-implant, and another lead had an event at 44 months post-implant, when fewer than 20 leads were at risk. These three events did not impact the survival probability estimates shown in this table.

Specification: Specify SureScan MRI 5-6-5

4.5 Extensions

From June 2004 to the report cut-off date of October 31, 2024, there were 3,749 extensions followed in the registry. The difference between the total number of extensions (n=3,749) versus neurostimulators (n=7,529) is due to the fact that some systems did not use an extension. The aggregate prospective follow-up time for all extensions was 135,390 months (11,283 years). An extension is a set of thin wires with a protective coating that connects the neurostimulator to the lead. Table 4.20 provides the number and percentage of extensions by model.

Table 4.20: Spinal Cord Stimulation Extension Counts by Model

Model Name	N (%)
Currently manufactured	**2634 (70.0%)**

4.5.1 Extension Events

There were 61 product performance-related events with an underlying reported etiology related to extension function. This includes 51 events with an extension etiology only and 10 events with both an extension and other etiology (including device and non-device etiologies). Of these, 47 were the initial product performance event that affected extension survival estimates; the majority were extension fracture (n=19) and extension migration (n=10).

For the purposes of survival analysis, a device's follow-up time is cut-off for one of

three reasons: 1) the occurrence of a product performance-related event; 2) the occurrence of a censoring event; or 3) the device is event-free and censored at the patient's last follow-up prior to the data cut-off. For extensions:

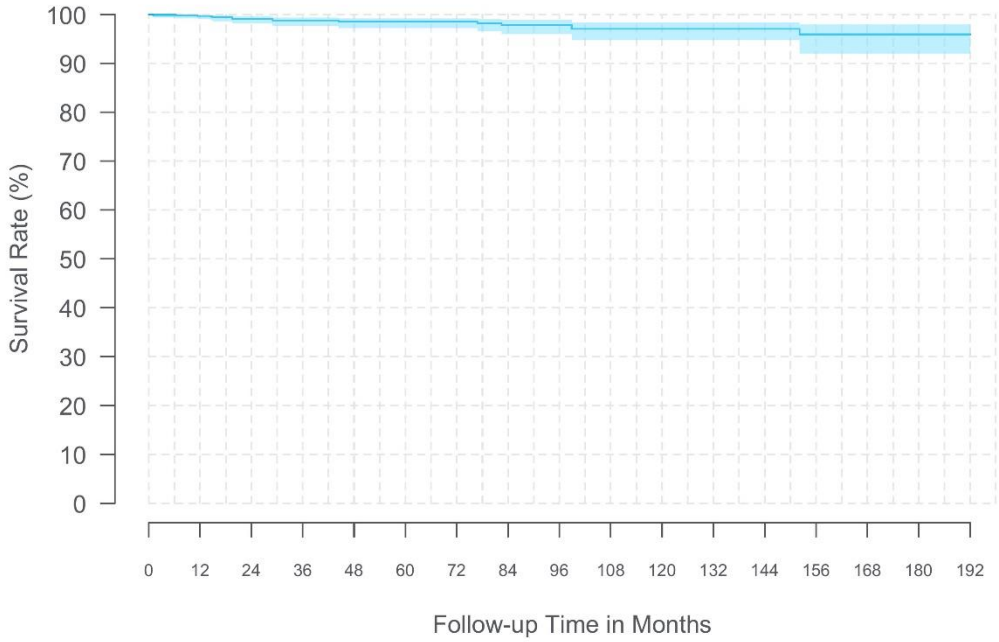
- 47 had follow-up time cut-off due to product performance-related events.
- 3,212 were censored in the survival analysis for the following reasons: patient expired, extension explanted, patient discontinued, therapy suspended, or site discontinued participation in the registry.
- 490 were free from product performance-related events and censoring events, and were censored at the last follow-up visit prior to the report cut-off.

4.5.2 Extension Models

The following figures and tables represent spinal cord stimulation extension survival and 95% confidence intervals where at least 20 spinal cord stimulation extensions contributed to each 3-month interval.

4.5.2.1 Model 1x8 Extension

Model Name	1x8 Extension (model 37081)
FDA Approval Date	April 2005
Extensions Enrolled	1,547
Extensions Currently Active in Study	221
Initial Product Performance Events	16
Median Follow-up Time (Months)	22.4
Cumulative Follow-up Time (Months)	59,034



Time Interval	1 Year	2 Years	3 Years	4 Years	5 Years
Survival (95% CI)	99.7% (99.1%, 99.9%)	99.1% (98.2%, 99.6%)	98.8% (97.6%, 99.4%)	98.5% (97.2%, 99.2%)	98.5% (97.2%, 99.2%)

5 Deep Brain Stimulation Systems

5.1 Study Participants

5.1.1 Centers

In this section, the deep brain stimulation tables and graphs were generated based on data collected between July 2009 and the report cut-off date of October 31, 2024. Sixty-six centers in North America, Europe, South America, Asia, and Australia have enrolled and contributed patients to the deep brain stimulation systems section of this report. Figure 5.1 shows a World Map, in which the countries that enrolled DBS patients are highlighted.

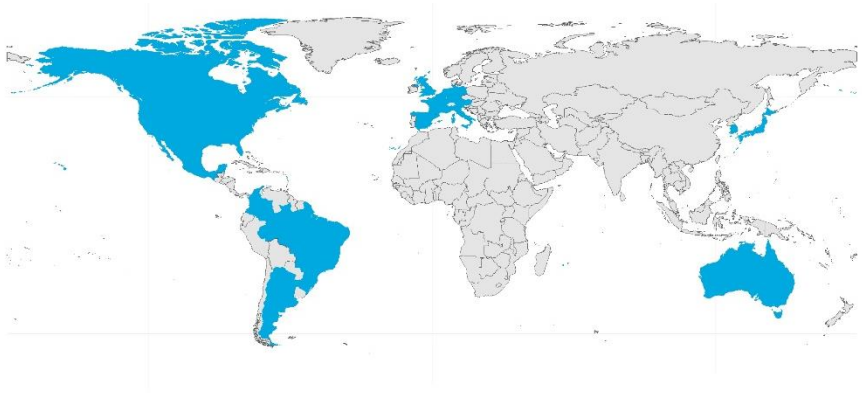

Figure 5.1: Countries with Deep Brain Stimulation Therapy Patients in Registry (Highlighted)

5.1.2 Patients

Of the 4,012 deep brain stimulation patients enrolled, the primary indications for implant were as follows: 63.63% were implanted for the treatment of Parkinson's Disease, 20.56% were implanted for the treatment of essential tremor, 9.35% were implanted for the treatment of dystonia, 1.92% were implanted for the treatment of epilepsy, 1.42% were implanted for the treatment of obsessive compulsive disorder, 2.39% were implanted for the treatment of other indications, and 0.72% were implanted for indications that were not specified in the database at the time of data cut-off (see Figure 5.2 and Table 5.1).

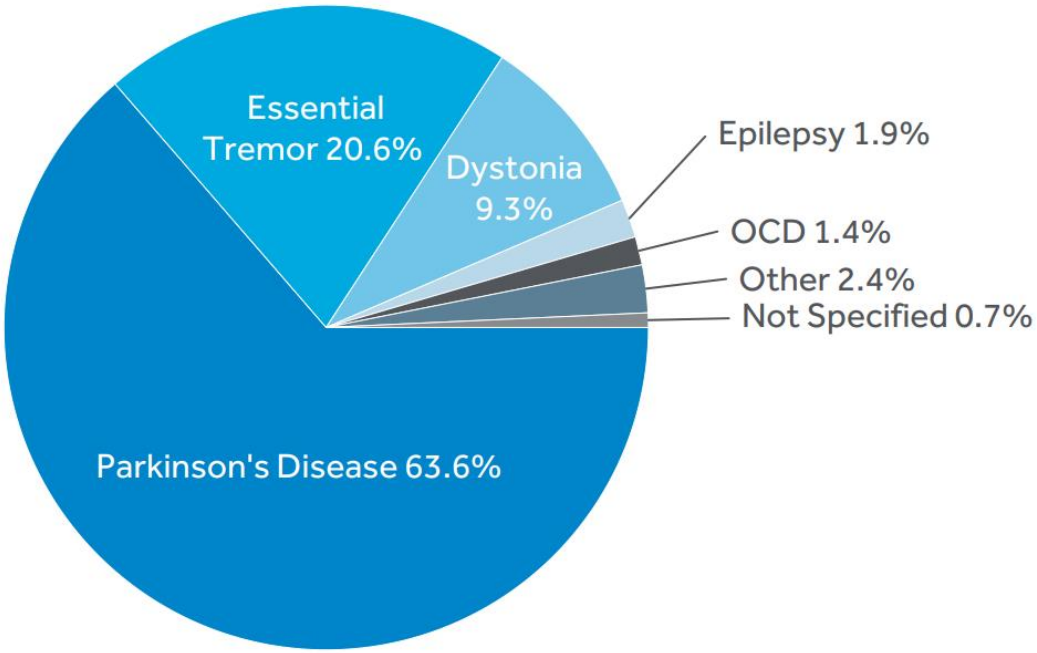

Figure 5.2: Deep Brain Stimulation Primary Treatment Indications

Table 5.1: Deep Brain Stimulation Primary Treatment Indications

Primary Treatment Indication[a]	Enrolled Patients (%)
Parkinson's Disease	2553 (63.63%)
Essential Tremor	825 (20.56%)
Dystonia	375 (9.35%)[b]
Epilepsy	77 (1.92%)
OCD	57 (1.42%)
Other	96 (2.39%)
Not Specified	29 (0.72%)
Total Patients	**4012 (100.00%)**

[a] For approved indications refer to product labeling for your geography.

[b] 375/4012 = 0.09347 or 9.347%

It is recognized that healthcare providers prescribe therapies to meet specific patient needs; however, Medtronic only directs the use of its products based on approved labeling, which varies by geography. Please contact your local Medtronic representative for region-specific product labeling (http://www.medtronic.com/us-en/about/locations.html).

5.2 Event Summary

There were 576 product performance events reported between July 2009 and October 31, 2024, in patients with deep brain stimulation systems. These events represented 22.4% of the total reported events (576/2,567), occurred in 340 of the 4,012 (8.5%) total patients enrolled, and are presented graphically within this report (e.g. events per patient years as well as survival curves). Of the remaining 1,991 reported non-product performance related events, 336 were serious and 1,655 were non-serious. Serious non-product performance related events (n=336) are described in Table 5.6. Non-serious non-product performance related (n=1,655) events are not listed in this report.

All registry devices that are returned to Medtronic are analyzed via a Returned Product Analysis (RPA) process. If available, RPA findings overwrite in the classification of the events. Within this report, Table 5.2 differentiates the events by those determined by the RPA process versus those determined by the physician. Please refer to the Methodology section for more information.

There were 510 deaths reported for patients followed in the PSR with deep brain stimulation systems (see Table 5.7), none of which were reported as a direct result of a product performance event. Early versions of the protocol required events to be reported only when the event required a surgical intervention, resulted in therapy abandonment, or resulted in death. The required event reporting definition was expanded in April 2010 to include all adverse events related to the device, implant procedure, and/or therapy.

5.2.1 Product Performance Events

Total	**576**	**3.9**	**340 (8.47%)**

[a] Medical Dictionary for Regulatory Activities (MedDRA) Lower-Level Term or Medtronic's coding system term for events that do not exist in the MedDRA dictionary.

[b] The total number of patients with events may not represent the sum of all rows, as a patient may have experienced more than one type of event.

[c] There were 953 patients that used rechargeable neurostimulators for DBS in the registry. A total of 2.5% (24/953) of patients with a rechargeable neurostimulator experienced a neurostimulator unable to recharge event.

[d] Including open circuit contact, electric discharge.

e Composed of event codes with 1 event each.

A total of 277 (48.1%) of the 576 product performance events were related to the lead, 108 (18.8%) were related to the extension, 102 (17.7%) were related to the neurostimulator, 15 (2.6%) were related to multiple etiologies, which includes events where at least one device and one non-device etiology was indicated, and 74 (12.8%) were related to other etiologies. Other etiologies included: 45 (7.8%) related to other component, 10 (1.7%) related to surgery/anesthesia, 7 (1.2%) related to incisional site/device tract, 7 (1.2%) related to recharging process, 3 (0.5%) related to programming/stimulation, and 2 (0.4%) related to other etiologies (see Figure 5.4). Events could have more than one etiology.

Relatedness is reported by the physician. In cases where the Clinical Events Committee (CEC) has adjudicated relatedness differently from the site, the CEC adjudication is used in this report for analysis purposes. However, both the site's reporting and the CEC's adjudication remain in the database.

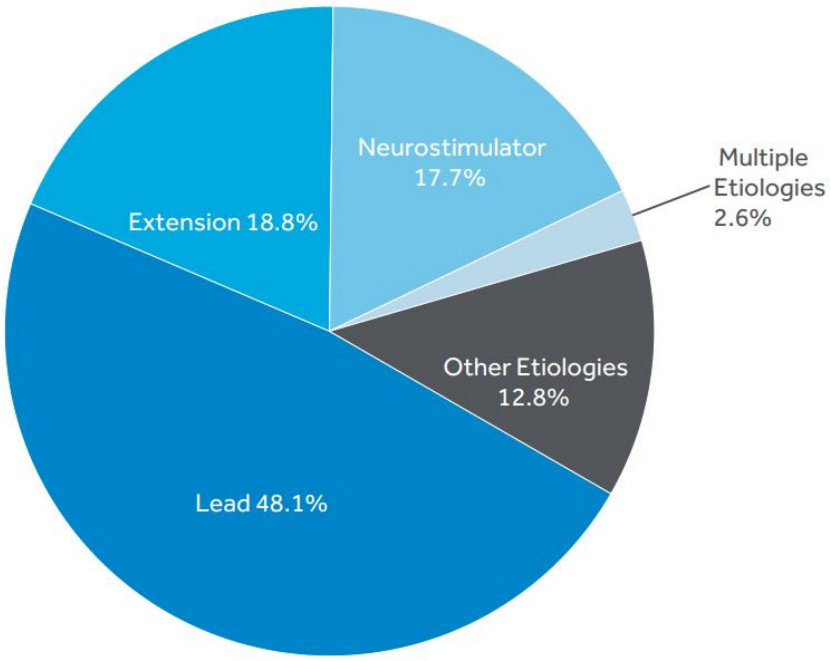

Figure 5.3: Deep Brain Stimulation System Product Performance Events by Relatedness

Table 5.3 and Table 5.4 describe the interventions taken for reported impedance events. In 35.5% and 32.5% of the high and low impedance events, respectively, the action taken was a surgical intervention. However, impedance could be used as a diagnostic

measurement and may not result in any intervention or clinical impact. The majority of events required no intervention, or device reprogramming only (58.4% for high impedance and 60.0% for low impedance).

Table 5.3: Deep Brain Stimulation System High Impedance Events by Intervention

Intervention	N (%) of High impedance Events
Device Surgical Intervention	86 (30.82%)
Reprogramming	64 (22.94%)
Other Surgical Intervention	13 (4.66%)
Other Intervention	8 (2.87%)
Medical or Non-Surgical Therapy	5 (1.79%)
Therapy Suspension	3 (1.08%)
Medication	1 (0.36%)
No Action Taken	99 (35.48%)
Total	**279 (100.00%)**

Table 5.4: Deep Brain Stimulation System Low Impedance Events by Intervention

Intervention	N (%) of Low impedance Events
Device Surgical Intervention	13 (32.50%)
Reprogramming	10 (25.00%)
Medication	2 (5.00%)
Other Intervention	1 (2.50%)
No Action Taken	14 (35.00%)
Total	**40 (100.00%)**

Table 5.5 describes the interventions taken for reported lead migration/dislodgement events over the total of 4,012 patients enrolled. 68.5% of reported lead migration/dislodgement events resulted in a surgical intervention and 14.8% resulted in reprogramming.

Table 5.5: Deep Brain Stimulation System Lead Migration/Dislodgement* Events by Intervention

Intervention	N (%) of Lead Migration/Dislodgement* Events
Device Surgical Intervention	35 (64.81%)
Reprogramming	8 (14.81%)
Other Surgical Intervention	2 (3.70%)
Medication	1 (1.85%)
No Action Taken	8 (14.81%)
Total	**54 (100.00%)**

* considering "dislodgment" as an observation, not confirmed by imaging

5.2.2 Clinical Events Not Related ToProduct Performance

The clinical events not related to product performance are summarized if:

- The patient was enrolled in the PSR since 2013, the year in which the clinical event collection was initiated (N=2,829).
- Categorized as serious adverse events (SAEs, N=336).
- Occurred with a System Organ Class (SOC) threshold ≥1% of patients.
- Other Considerations
  - Some events are described in high level group terms (HLGT) to provide more specificity, if needed
  - Some therapies will provide therapy relevant events (e.g. Negative changes in behavior from baseline, new or worsening depression, attempted suicide, etc.)

Table 5.6: Deep Brain Stimulation System Clinical Events Not Related To Product Performance

Event Type[a]	Number of SAE	Patients with SAE n (%) N=2,829	SAE Per 100 Patient Months	Patients with SAE Requiring Surgical Intervention n (%) N=2,829
Infections and infestations	126	103 (3.64%)	0.11	97 (3.43%)
Infections - pathogen unspecified	123	100 (3.53%)	0.11	95 (3.36%)
Other[b]	3	3 (0.11%)	0.00	2 (0.07%)
Nervous system disorders	78	69 (2.44%)	0.07	17 (0.60%)
Movement disorders (incl parkinsonism)	24	21 (0.74%)	0.02	5 (0.18%)
Central nervous system vascular disorders	22	22 (0.78%)	0.02	4 (0.14%)
Neurological disorders NEC	14	13 (0.46%)	0.01	4 (0.14%)
Seizures (incl subtypes)	8	8 (0.28%)	0.01	1 (0.04%)
Other[b]	10	10 (0.35%)	0.01	3 (0.11%)
General disorders and administration site conditions	66	62 (2.19%)	0.06	41 (1.45%)
Complications associated with device	48	46 (1.63%)	0.04	34 (1.2%)
General system disorders NEC	10	10 (0.35%)	0.01	2 (0.07%)
Other[b]	8	8 (0.28%)	0.01	6 (0.21%)
Other SOC Terms (<1.0% Threshold)	66	63 (2.23%)	0.06	27 (0.95%)
Total	**336**	**264 (9.33%)**	**0.31**	**165 (5.83%)**

[a] The total number of patients with events may not represent the sum of all rows, as a patient may have experienced more than one type of event.

[b] Composed of high-level group term event codes with fewer than 5 events each.

5.2.3 Patient Deaths

There were 510 deaths reported for patients with deep brain stimulation systems, none of which were reported as a direct result of a product performance event. Since July 2009, of the 4,012 enrolled patients, there have been 407 (deaths reported in this patient registry study based upon patients receiving therapy for Parkinson's Disease, 74) for essential tremor, 16 for dystonia, 4 for epilepsy, 1 (for OCD, and 7 for other indications (see Table 5.7).

Table 5.7: Deep Brain Stimulation System Patient Deaths and Primary Indication for Implantation

Number of Reports of Death by Primary Indication[a]	N (%[b]) of Deaths	Mean Age of Death in Years
Parkinson's Disease	407 (79.8%)	74.1
Essential Tremor	74 (14.5%)	78.2
Dystonia	16 (3.1%)	61.3
Epilepsy	4 (0.8%)	29.8
OCD	1 (0.2%)	70.4
Other	7 (1.4%)	66.9
Not Specified	1 (0.2%)	50.0
Total	**510**	**74.1**

[a] For approved indications refer to product labeling for your geography.

b The percentage is based upon the total patient death events per distribution group (primary indication) and not based upon the rate of occurrence among all enrolled patients

5.3 Neurostimulators

From July 2009 to the report cut-off date of October 31, 2024, there were 6,349 neurostimulators followed in the registry. The difference between the total number of patients (n=4,012) versus the number of neurostimulators (n=6,349) is due to the fact that some patients were implanted with more than one neurostimulator or were subsequently re-implanted. The aggregate prospective follow-up time for all neurostimulators was 189,261 months (15,772 years). Table 5.8 provides the number and percentage of neurostimulators by model.

Table 5.8: Deep Brain Stimulation Neurostimulator Counts by Model

Model Name	N (%)
Currently manufactured	
Activa™ PC (model 37601)	2771 (43.6%)
Percept™ PC (model B35200)	1238 (19.5%)
Activa™ RC (model 37612)	974 (15.3%)
Activa™ SC (model 37603)	700 (11.0%)
Activa ™SC (model 37602)	475 (7.5%)
Percept™ RC (model B35300)	78 (1.2%)
No longer manufactured	
Soletra (model 7426)	67 (1.1%)
Kinetra (model 7428)	12 (0.2%)
Other/Unspecified[a]	**34 (0.5%)**
Total	**6349**

[a] Other includes Activa™ PC+S and non-Activa™ systems used for DBS.

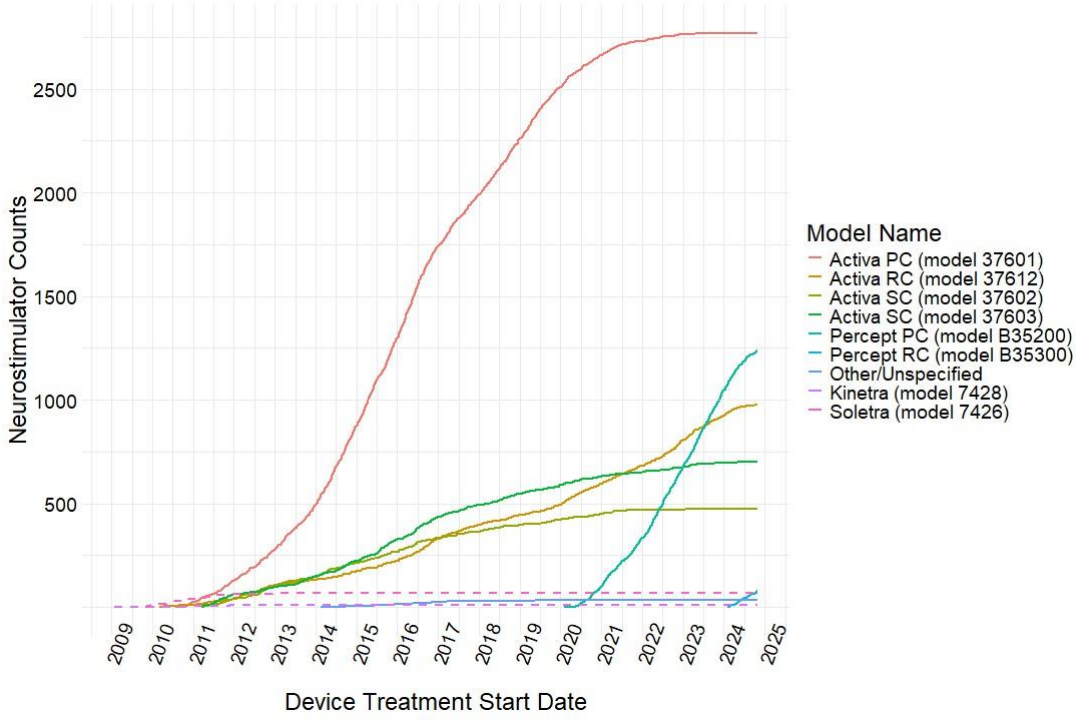

Figure 5.4: Cumulative Neurostimulator Counts by model over time

5.3.1 Neurostimulator Events

Of the total of 576 product performance-related events, there were 104 product performance-related events with an underlying reported etiology related to neurostimulator function. This includes 102 events with a neurostimulator etiology and 2 events with both a neurostimulator and other etiology (including device and non-device etiologies). Of these, 77 were the initial product performance events that affected neurostimulator survival estimates. For neurostimulators in the registry, the current return rate to Medtronic Returned Product Analysis (RPA) was 3.7% (106/2,845). The proportion was based upon the number of registry neurostimulators received by RPA, divided by the sum of the total number of explanted devices and the total number of neurostimulators in patients who have expired. In the 104 neurostimulator events, 97.1 % (101/104) were assigned as device related by the physician, not returned to Medtronic RPA (see Table 5.9).

Table 5.9: Deep Brain Stimulation Neurostimulator Product Performance Events by Determination

Product Performance Events	N (%)
RPA Determination	3 (2.9%)
Premature Battery Depletion	3 (2.9%)

Product Performance Events	N (%)
Physician's Determination	101 (97.1%)
High Impedance	49 (47.1%)

[a] Battery's life expectancy

[b] Open circuit contact

For the purposes of survival analysis, a device's follow-up time is cut-off for one of three reasons: 1) the occurrence of a product performance-related event; 2) the occurrence of a censoring event; or 3) the device is event-free and censored at the patient's last follow-up prior to the data cut-off. For neurostimulators:

- 77 had follow-up time cut-off due to product performance-related events.

- 4,398 were censored in the survival analysis for the following reasons: patient expired, neurostimulator explanted, patient discontinued, therapy suspended, or site discontinued participation in the registry.
- 1,874 were free from product performance-related events and censoring events and were censored at the last follow-up visit prior to the report cut-off.

Initial product performance events of other/unspecified models (n=1) are not summarized in the subsequent sections.

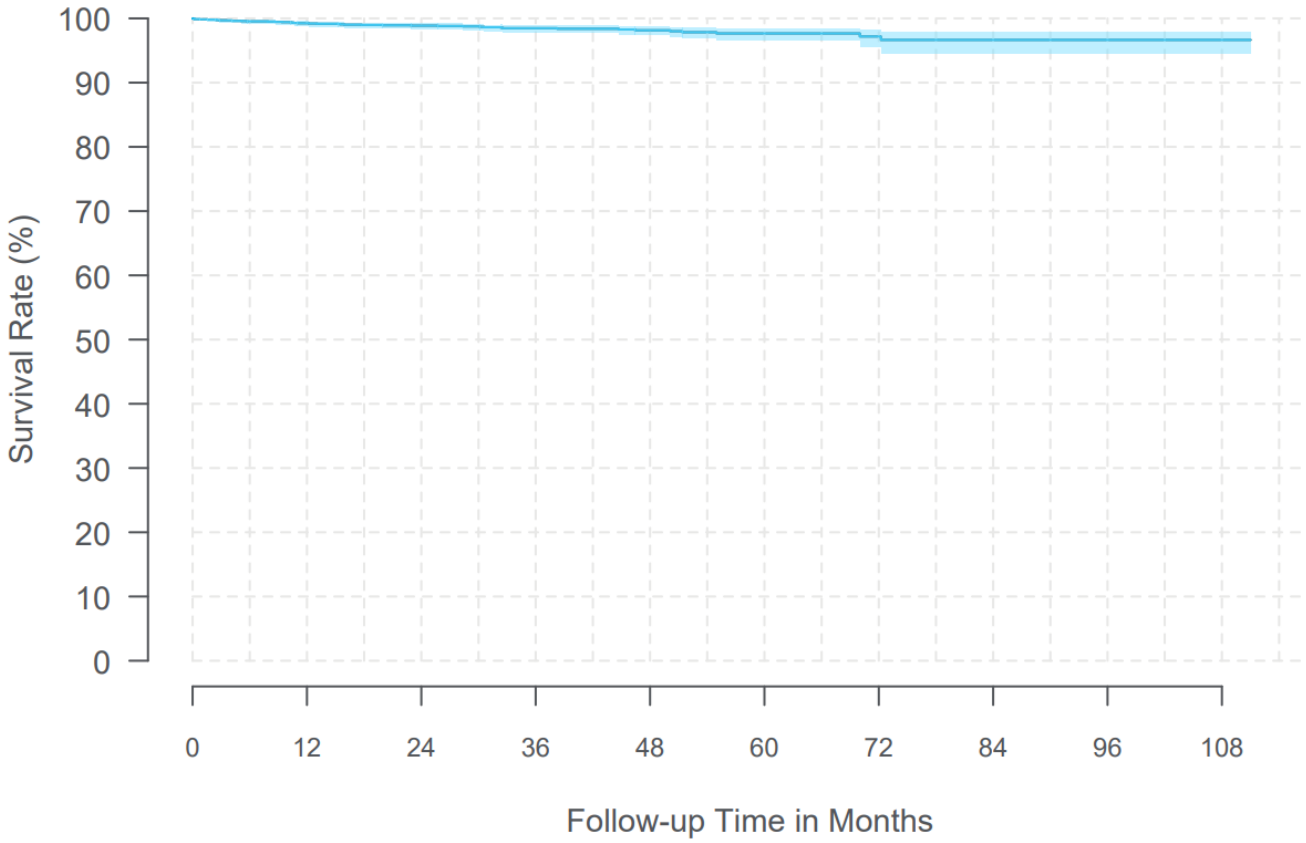
5.3.2 Neurostimulator Models

The following figures and tables represent neurostimulator survival and 95% confidence intervals where at least 20 neurostimulators contributed to each 3-month interval.

The Soletra and Kinetra models were removed from the table due to the fact that there are no more active devices in PSR. For information on survival for those models, please refer to past reports.

5.3.2.1 Model Activa™ PC 37601

Model Name	Activa™ PC
FDA Approval Date	April 2009
Neurostimulators Enrolled	2,771
Neurostimulators Currently Active in Study	270
Initial Product Performance Events	46
Median Follow-up Time (Months)	32.2
Cumulative Follow-up Time (Months)	97,852



Time Interval	1 Year	2 Years	3 Years	4 Years	5 Years
Survival (95% CI)	99.2% (98.8%, 99.5%)	98.9% (98.4%, 99.2%)	98.5% (97.8%, 98.9%)	98.1% (97.4%, 98.7%)	97.7% (96.6%, 98.4%)
Sample Size	2290	1803	1225	737	393

Time Interval	6 Years	7 Years	8 Years	9 Years	At 111 Months
Survival (95% CI)	97.2% (95.6%, 98.2%)	96.6% (94.6%, 97.9%)	96.6% (94.6%, 97.9%)	96.6% (94.6%, 97.9%)	96.6% (94.6%, 97.9%)
Sample Size	182	91	46	24	21

Specification: Activa™ PC (model 37601)	
Height	2.6 in (65 mm)
Width	1.9 in (49 mm)
Thickness	0.6 in (15 mm)
Volume	39 cc
Battery type	Non-Rechargeable
Expected Battery life	Depends on settings and use
Number of Channels	2
Maximum Electrodes	8
Amplitude	0 - 10.5 V (voltage mode) 0 - 25.5 mA (current mode)
Rate	2 - 250 Hz (voltage mode) 30 - 250 Hz (current mode)
Pulse Width	60 - 450 µsec
Groups	4
Programs	16 (up to 4 per group)

5.3.2.6 Model Percept™ RC B35300

Model Name	Percept™ RC
FDA Approval Date	January 2024
Neurostimulators Enrolled	78
Neurostimulators Currently Active in Study	76
Initial Product Performance Events	0
Median Follow-up Time (Months)	0
Cumulative Follow-up Time (Months)	88

There is not sufficient data to report on Percept™ RC (model B35300) survival at 1 year or later and there have been no reported product performance events for this model as of the data cut-off date.

Specification: Percept™ RC (model B35300)	
Height	57 mm
Width	47 mm
Thickness	6 mm (case) 9 mm (connector block)
Volume	13.77 cm3
Battery type	Rechargeable
Expected Battery life	15years before ERI*
Number of Channels	2
Maximum Electrodes	16 Electrodes (8 per channel)
Amplitude	0 to 25.5 mA
Rate	2 to 250 Hz
Pulse Width	20 to 450 µsec
Groups	4
Programs	16 (up to 2 per hemisphere per group)
Implant Depth	≤ 3cm

*ERI: Elective Replacement Indicator

Percept™ PC (model B35200)					

5.4 Leads

From July 2009 to the report cut-off date of October 31, 2024, there were 6,941 leads followed in the registry. The difference between the total number of leads (n=6,941) versus neurostimulators (n=6,349) is due to the fact that some patients were subsequently re-implanted with a lead or were implanted with more than one lead. The aggregate prospective follow-up time for all leads was 308,892 months (25,741 years). Table 5.12 provides the number and percentage of leads by model.

Table 5.12: Deep Brain Stimulation Lead Counts by Model

Model Name	N (%)
3389 (compact electrode spacing)	3203 (46.1%)
3387 (standard electrode spacing)	2452 (35.3%)
SenSight™ B33005 (compact electrode spacing)	876 (12.6%)
SenSight™ B33015 (standard electrode spacing)	318 (4.6%)
3391 (large electrode and wide spacing)	72 (1.0%)
Other/Unspecified[a]	20 (0.3%)
Total	**6941**

[a] Includes leads used in other manufacturer's systems.

5.4.1 Lead Events

Of the total of 576 product performance-related events, there were 286 product performance- related events with an underlying reported etiology related to lead function. This includes 277 events with a lead etiology and 9 events with both a lead and other etiology (including device and non-device etiologies). Of these, 153 were the initial product performance event that affected lead survival estimates.

For the purposes of survival analysis, a device's follow-up time is cut-off for one of three reasons: 1) the occurrence of a product performance-related event; 2) the occurrence of a censoring event; or 3) the device is event-free and censored at the patient's last follow-up prior to the data cut-off. For leads:

- 153 had follow-up time cut-off due to product performance-related events.
- 3,585 were censored in the survival analysis for the following reasons: patient expired, leads explanted, patient discontinued, therapy suspended, or site discontinued participation in the registry.
- 3,203 were free from product performance-related events and censoring events, and were censored at the last follow-up visit prior to the report cut-off.

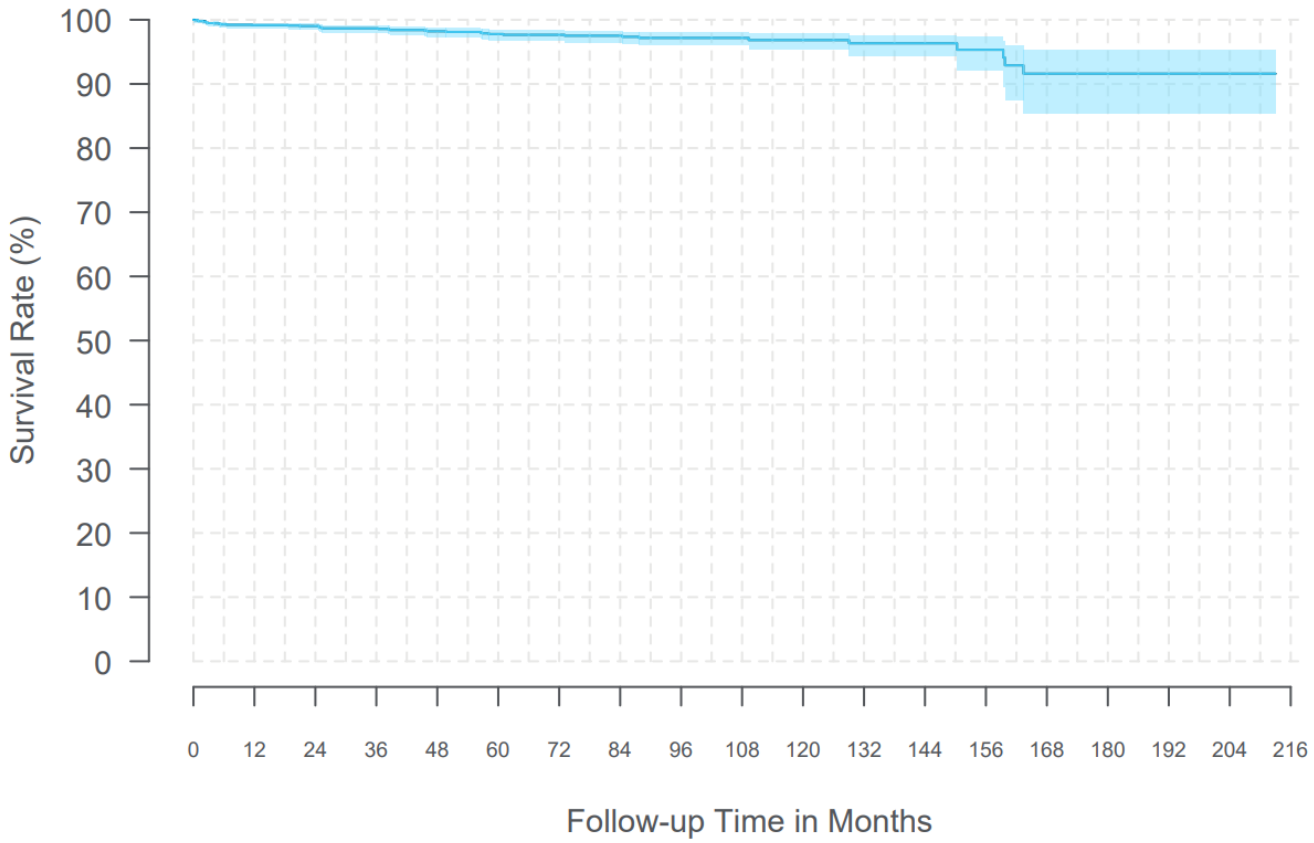
Initial product performance events of other/unspecified models (n=3) are not summarized in the subsequent sections.

5.4.2 Lead Models

The following figures and tables represent lead survival and 95% confidence intervals where at least 20 leads contributed to each 3-month interval. Due to enrollment of replacement patients with previously implanted leads, sample size may increase at later timepoints.

5.4.2.1 Model 3387

Model Name	3387
FDA Approval Date	July 1997
Leads Enrolled	2,452
Leads Currently Active in Study	930
Initial Product Performance Events	44
Median Follow-up Time (Months)	39.4
Cumulative Follow-up Time (Months)	120,981



Time Interval	1 Year	2 Years	3 Years	4 Years	5 Years
Survival (95% CI)	99.2% (98.6%, 99.5%)	99.0% (98.5%, 99.4%)	98.7% (98.0%, 99.1%)	98.2% (97.4%, 98.8%)	97.8% (96.8%, 98.4%)

5.5 Extensions

From July 2009 to the report cut-off date of October 31, 2024, there were 6,981 extensions followed in the registry. The difference between the total number of extensions (n=6,981) versus neurostimulators (n=6,349) is due to some patients implanted with more than one extension or subsequently re-implanted with an extension. The aggregate prospective follow-up time for all extensions was 302,715 months (25,226 years). Table 5.15 provides the number and percentage of extensions by model.

Table 5.15: Deep Brain Stimulation Extension Counts by Model

Model Name	N (%)
Currently manufactured	
37085/37086 (quadripolar stretch)	5175 (74.1%)
SenSight™ B34000/B34000M	1169 (16.7%)
No longer manufactured	
7482 (quadripolar)[a]	508 (7.3%)
Other/Unspecified[b]	129 (1.8%)
Total	**6981**

[a] Includes Models 7482 and 7482a.
[b] Includes extensions for other legacy stimulation systems.

5.5.1 Extension Events

Of the total of 576 product performance-related events, there were 112 product performance-related events with an underlying reported etiology related to extension function. This includes 108 events with an extension etiology and 4 events with both an extension and other etiology (including device and non-device etiologies). Of these, 89 were the initial product performance event that affected extension survival estimates.

For the purposes of survival analysis, a device's follow-up time is cut-off for one of three reasons: 1) the occurrence of a product performance-related event; 2) the occurrence of a censoring event; or 3) the device is event-free and censored at the patient's last follow-up prior to the data cut-off. For extensions:

- 89 had follow-up time cut-off due to product performance-related events.
- 3,708 were censored in the survival analysis for the following reasons: patient expired, extension explanted, patient discontinued, therapy suspended, or site discontinued participation in the registry.

- 3,184 were free from product performance-related events and censoring events, and were censored at the last follow-up visit prior to the report cut-off.

Initial product performance events of other/unspecified models (n=6) are not summarized in the subsequent sections.

5.5.2 Extension Models

The following figures and tables represent extension survival and 95% confidence intervals where at least 20 extensions contributed to each 3-month interval.

5.5.2.1 Model 37085/37086

Model Name	37085/37086
FDA Approval Date	March 2009/February 2012

6 Sacral Neuromodulation Systems

6.1 Study Participants

6.1.1 Centers

In this section, the sacral neuromodulation tables and graphs were generated based on data collected between April 2010 and the report cut-off date of October 31, 2024. Twenty-four centers in North America, South America, and Europe have enrolled and contributed patients to the sacral neuromodulation systems section of this report. Figure 6.1 shows a World Map, in which the countries that enrolled SNM patients are highlighted.

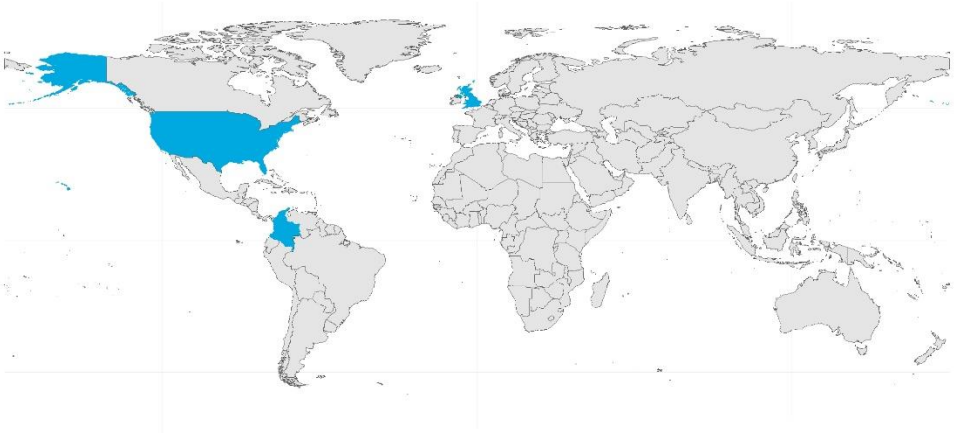

Figure 6.1: Countries with Sacral Neuromodulation Therapy Patients in Registry (Highlighted)

6.1.2 Patients

Of the 1,727 sacral neuromodulation patients enrolled, the primary indications for implant were as follows: 44.1% were implanted for the treatment of urinary urge incontinence, 25.9% were implanted for the treatment of urgency-frequency, 13.0% were implanted for the treatment of non-obstructive urinary retention, 10.2% were implanted for the treatment of fecal incontinence, 2.1% were implanted for the treatment of bladder pain syndrome, 3.5% were implanted for the treatment of some other indication, and 1.0% were implanted for indications that were not specified in the database at the time of data cut-off (see Figure 6.2 and Table6.1).

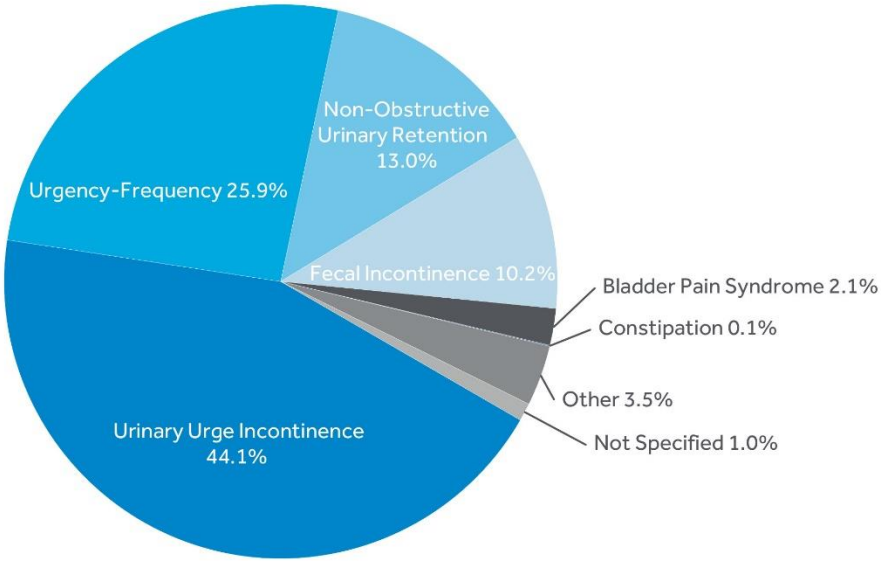

Figure 6.2: Sacral Neuromodulation Primary Treatment Indications

Table 6.1: Sacral Neuromodulation Primary Treatment Indications

Primary Treatment Indication[a]	Enrolled Patients (%)
Urinary Urge Incontinence	761 (44.1%)
Urgency-Frequency	448 (25.9%)
Non-Obstructive Urinary Retention	224 (13.0%)
Fecal Incontinence	177 (10.2%)
Bladder Pain Syndrome	37 (2.1%)
Constipation	1 (0.1%)
Other	61 (3.5%)
Not Specified	18 (1.0%)
Total Patients	**1727 (100.00%)**

[a] For approved indications refer to product labeling for your geography.

It is recognized that healthcare providers prescribe therapies to meet specific

patient needs; however, Medtronic only directs the use of its products based on approved labeling, which varies by geography. Please contact your local Medtronic representative for region- specific product labeling (https://www.medtronic.com/us-en/our-company/locations.html).

6.2 Event Summary

There were 258 product performance events (PPE) reported between April 2010 and October 31, 2024, in patients with sacral neuromodulation systems. These events represent 17.3% of the total reported events (258/1,494), occurred in 184 (10.7%) of the 1,727 total patients enrolled, and are presented graphically within this report (e.g., events per patient years as well as survival curves). In addition, there were 1,171 non-product performance events that were collected to understand patient experience (clinical signs and symptoms) with the sacral neuromodulation systems. As an ongoing registry, events not coded at the time of the data snapshot (waiting on further information) will be included in future reports (n=65).

Any registry devices that are returned to Medtronic are analyzed via a Returned Product Analysis (RPA) process. If available, RPA findings assist in the classification of the events. Within this report, Table 6.2 differentiates the events by those determined by the RPA process versus those determined by the physician. Please refer to the Methodology section for more information.

There were 89 deaths reported for patients followed in the PSR with sacral neuromodulation systems, none of which were reported as a direct result of a product performance event.

6.2.1 Product Performance Events

Table 6.2: Sacral Neuromodulation System Product Performance Events

Product Performance Events[a]	Event Counts	Events Per 100 Patient Years	Patients with Events[b] (%) N=1727
RPA Determination	**0**	**0.0**	**0 (0.00%)**
Physician's Determination	**258**	**4.8**	**184 (10.65%)**
High Impedance	99	1.8	74 (4.28%)
Lead Migration/Dislodgement	48	0.9	39 (2.26%)
Device Lead Issue	30	0.6	20 (1.16%)

Product Performance Events[a]	Event Counts	Events Per 100 Patient Years	Patients with Events[b] (%) N=1727
Lead Fracture	25	0.5	21 (1.22%)
Device Malfunction	15	0.3	13 (0.75%)
Low Impedance	11	0.2	10 (0.58%)

Device Issue	4	0.1	3 (0.17%)
Device Charging Issue	2	0.0	2 (0.12%)
Device Failure	2	0.0	1 (0.06%)
Device Overheating	2	0.0	2 (0.12%)
Unspecified	2	0.0	2 (0.12%)
Other	7	0.1	7 (0.41%)
Total	**258**	**4.8**	**184 (10.65%)**

[a] Medical Dictionary for Regulatory Activities (MedDRA) Lower-Level Term or Medtronic's coding system term for events that do not exist in the MedDRA dictionary.

[b] The total number of patients with events may not represent the sum of all rows, as a patient may have experienced more than one type of event.

A total of 170 (65.9%) of 258 product performance events were related to the lead only, 53 (20.5%) related to the neurostimulator only, 2 (0.8%) related to the extension only, 8 (3.1%) related to multiple etiologies (which includes events where at least one device and one non-device etiology was indicated), and 25 (9.7%) related to other/not specified etiologies. Relatedness is determined by the physician.

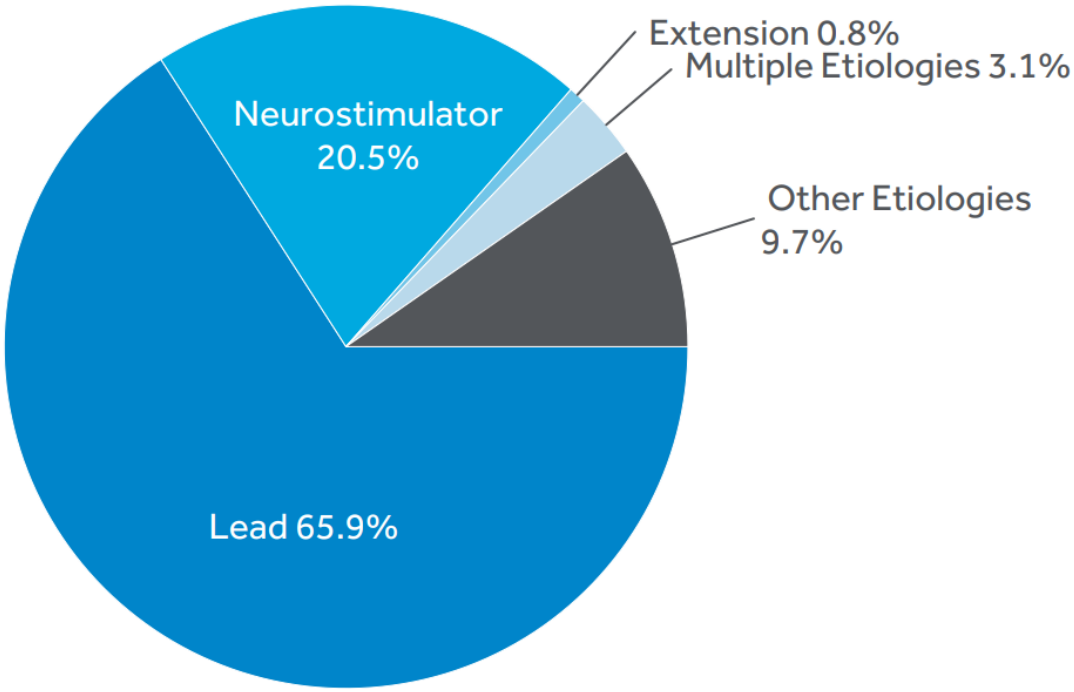

Figure 6.3: Sacral Neuromodulation System Product Performance Events by Relatedness

Table 6.3 describes the interventions completed for product performance events that required action from the health care provider and thereby may have resulted in an incremental impact to the patient. Survival estimates presented in previous product performance reports included events where no action was taken. To present survival estimates that may better correlate with patient impact, events where no action was taken have been removed from the device survival estimates presented in this report. The far-left column lists the top five reported PPEs, and all other reported PPEs are listed under Other. The subsequent columns represent the actions taken by the reporting physician.

Table 6.3: Sacral Neuromodulation System Product Performance Events by Intervention

Events by Intervention[a]	Surgical Intervention	Reprogramming	Therapy Suspension	Medical or Non-Surgical Intervention	No Action Taken	Total Events
High Impedance	53 (53.5%)	35 (35.4%)	0 (0.0%)	0 (0.0%)	11 (11.1%)	99

Events by Intervention[a]	Surgical Intervention	Reprogramming	Therapy Suspension	Medical or Non-Surgical Intervention	No Action Taken	Total Events
Lead Migration/Dislodgement	34 (70.8%)	6 (12.5%)	1 (2.1%)	1 (2.1%)	6 (12.5%)	48
Device Lead Issue	12 (40.0%)	9 (30.0%)	4 (13.3%)	0 (0.0%)	5 (16.7%)	30
Lead Fracture	17 (68.0%)	2 (8.0%)	1 (4.0%)	3 (12.0%)	2 (8.0%)	25
Device Malfunction	8 (53.3%)	4 (26.7%)	2 (13.3%)	0 (0.0%)	1 (6.7%)	15
Other[b]	27 (65.9%)	6 (14.6%)	1 (2.4%)	3 (7.3%)	4 (9.8%)	41
Total	**151 (58.5%)**	**62 (24.0%)**	**9 (3.5%)**	**7 (2.7%)**	**29 (11.2%)**	**258**

[a] Medical or Non-Surgical Therapy contains but is not limited to the following actions: medication adjustment based on disease symptoms, imaging (e.g. MRI or X-ray), other specialist referral.

[b] Other represents all reported PPEs that were not in the top five of occurrence.

6.2.2 Clinical Events Not Related to Product Performance

The clinical events not related to product performance are summarized if:

- The patient was enrolled in the PSR since 2013, the time in which clinical event collection was initiated (n=1,417)
- Categorized as serious adverse events (SAEs, n=12)
- Occurred with a System Organ Class (SOC) threshold ≥ 0.5% of patients
- Other considerations
  - Some events are described in high level group terms (HLGT) to provide more specificity, if needed

Table 6.4: Sacral Neuromodulation System Clinical Events Not Related To Product Performance

Event Type	Number of SAE	Patients with SAE n (%) N=1417	SAE Per 100 Patient Months	Patients with SAE Requiring Surgical Intervention n (%) N=1417
Infections and infestations	**9**	**9 (0.64%)**	**0.018**	**7 (0.49%)**
Infections - pathogen unspecified	9	9 (0.64%)	0.018	7 (0.49%)
Other SOC Terms (<0.5% Threshold)[a]	**3**	**3 (0.21%)**	**0.006**	**1 (0.07%)**
Total	**12**	**12 (0.85%)**	**0.024**	**8 (0.56%)**

[a] Composed of high-level group term event codes with fewer than 5 events each.

6.2.3 Patient Deaths

In earlier versions of the protocol, deaths were only assessed for the relatedness to the device product performance. After 2010, death assessments were expanded to also include the relationship to the implant procedure and/or therapy. As of the report cut-off, a total of 89 patients in the registry had expired. No deaths were reported as a direct result of a product performance event.

The percentage is based upon the total patient death events and not based upon the rate of occurrence. **Tables depicted without a patient denominator should not be interpreted using other numbers within this report to calculate event rates.**

Table 6.5: Sacral Neuromodulation System Patient Deaths by Primary Indication

Number of Reports of Death by Primary Indication[a]	N (%) of Deaths
Urinary Urge Incontinence	37 (41.6%)
Urgency-Frequency	30 (33.7%)
Urinary Retention	12 (13.5%)
Fecal Incontinence	5 (5.6%)
Other	5 (5.6%)
Total	**89 (100.0%)**

[a] For approved indications refer to product labeling for your geography.

6.3 Neurostimulators

From April 2010 to the report cut-off date of October 31, 2024, there were 1,859 neurostimulators followed in the registry. The difference between the total number of patients (n=1,727) versus the total number of neurostimulators (n=1,859) is due to the fact that some patients were subsequently re-implanted. The aggregate prospective follow-up time for all neurostimulators was 63,025 months (5,252 years).

Table 6.6: Sacral Neuromodulation Neurostimulator Counts by Model

Model Name	N (%)
InterStim II (model 3058)	1415 (76.1%)
InterStim X (model 97800)	282 (15.2%)
InterStim (model 3023)	102 (5.5%)
InterStim Micro (model 97810)	60 (3.2%)
Total	**1859 (100.0%)**

6.3.1 Neurostimulator Events

There were 57 product performance-related events with an underlying reported etiology related to neurostimulator function. This includes 53 events with a neurostimulator etiology and 4 events with both a neurostimulator and other etiology (including device and non-device etiologies). Of these, 48 were the initial product performance events that affected neurostimulator survival estimates.

For neurostimulators in the registry, the current return rate to Medtronic Returned Product Analysis (RPA) was 9.76% (58/594). The proportion was based upon the number of registry neurostimulators received by RPA, divided by the sum of the total number of explanted devices and the total number of neurostimulators in patients who have expired. In the 57 neurostimulator events, 100.0% (57/57) were assigned as device related by the physician, not returned to Medtronic RPA (see Table6.7)

Table 6.7: Sacral Neuromodulation Neurostimulator PPE by Determination

Product Performance Events	N (%)
Physician's Determination	**57 (100.0%)**
High Impedance	21 (36.8%)
Device Lead Issue	7 (12.3%)

Product Performance Events	N (%)
Device Malfunction	7 (12.3%)
Lead Migration/Dislodgement	5 (8.8%)
Premature Battery Depletion	4 (7.0%)
Device Electrical Impedance Issue	2 (3.5%)
Device Issue	2 (3.5%)
Device Overheating	2 (3.5%)
Lead Fracture	2 (3.5%)
Device Battery Issue	1 (1.8%)
Device Breakage	1 (1.8%)
Device Connection Issue	1 (1.8%)
Device Failure	1 (1.8%)
Unspecified	1 (1.8%)

For the purposes of survival analysis, a device's follow-up time is cut off for one of three reasons: 1) the occurrence of a product performance-related event; 2) the occurrence of a censoring event; or 3) the device is event-free and censored at the patient's last follow-up prior to the data cut-off. For neurostimulators:

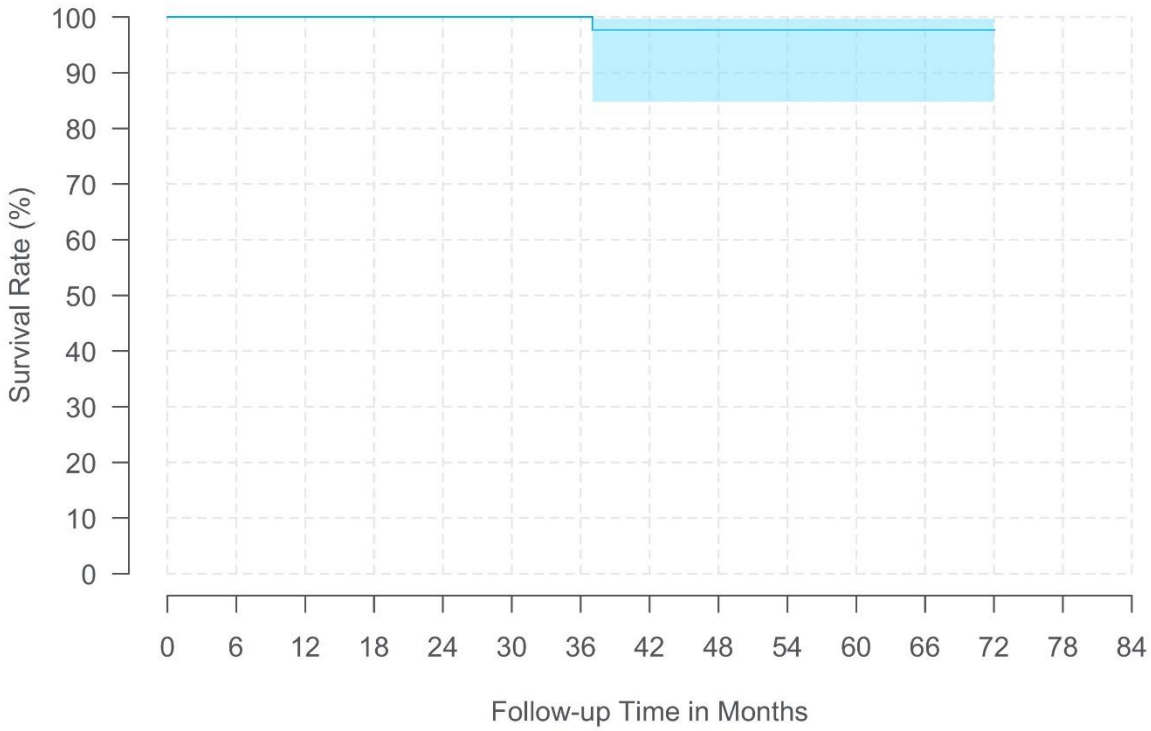
- 48 had follow-up time cut-off due to product performance-related events.
- 1,219 were censored in the survival analysis for the following reasons: patient expired, neurostimulator explanted, patient discontinued, therapy suspended, or site discontinued participation in the registry.
- 592 were free from product performance-related events and censoring events and were censored at the last follow-up visit prior to the report cut-off.

6.3.2 Neurostimulator Models

The following figures and tables represent neurostimulator survival and 95% confidence intervals (CIs) where at least 20 neurostimulators contributed to each 3-month interval.

6.3.2.1 Model 3023

Model Name	InterStim
FDA Approval Date	July 1998
Neurostimulators Enrolled	102
Neurostimulators Currently Active in Study	1
Initial Product Performance Events	2
Median Follow-up Time (Months)	28.8
Cumulative Follow-up Time (Months)	4,104



Time Interval	1 Year	2 Years	3 Years	4 Years	5 Years
Survival (95% CI)	100.0% (NA)	100.0% (NA)	100.0% (NA)	97.7% (84.8%, 99.7%)	97.7% (84.8%, 99.7%)
Sample Size	70	60	43	33	25

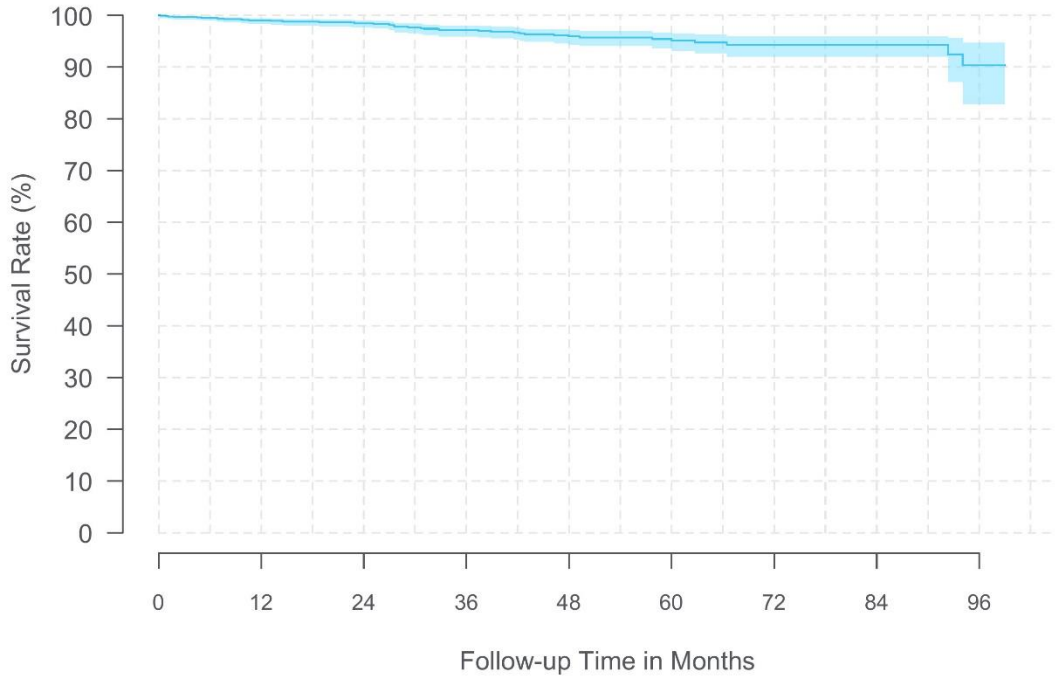
Time Interval	6 Years
Survival (95% CI)	97.7% (84.8%, 99.7%)
Sample Size	22

Specification: 3023	
Height	2.2 in (55 mm)
Width	2.4 in (60 mm)
Thickness	0.4 in (10 mm)
Volume	25 cc
Battery type	Non-Rechargeable
Expected Battery life	Depends on settings and use
Maximum Electrodes	4
Amplitude	0 - 10.5 V
Rate	2.1 - 130 Hz
Pulse Width	60 - 450 µsec
Programs	4
Implant Depth	≤ 4 cm

Neurostimulator Event Summary: 3023	N
High Impedance	1
Premature Battery Depletion	1
Total	**2**

6.3.2.2 Model 3058

Model Name	InterStim II
FDA Approval Date	June 2006
Neurostimulators Enrolled	1,415
Neurostimulators Currently Active in Study	295
Initial Product Performance Events	44
Median Follow-up Time (Months)	34.7
Cumulative Follow-up Time (Months)	54,392



Time Interval	1 Year	2 Years	3 Years	4 Years	5 Years
Survival (95% CI)	99.1% (98.4%, 99.5%)	98.5% (97.6%, 99.0%)	97.2% (95.9%, 98.0%)	96.0% (94.3%, 97.1%)	95.1% (93.2%, 96.5%)
Sample Size	1157	902	686	475	299

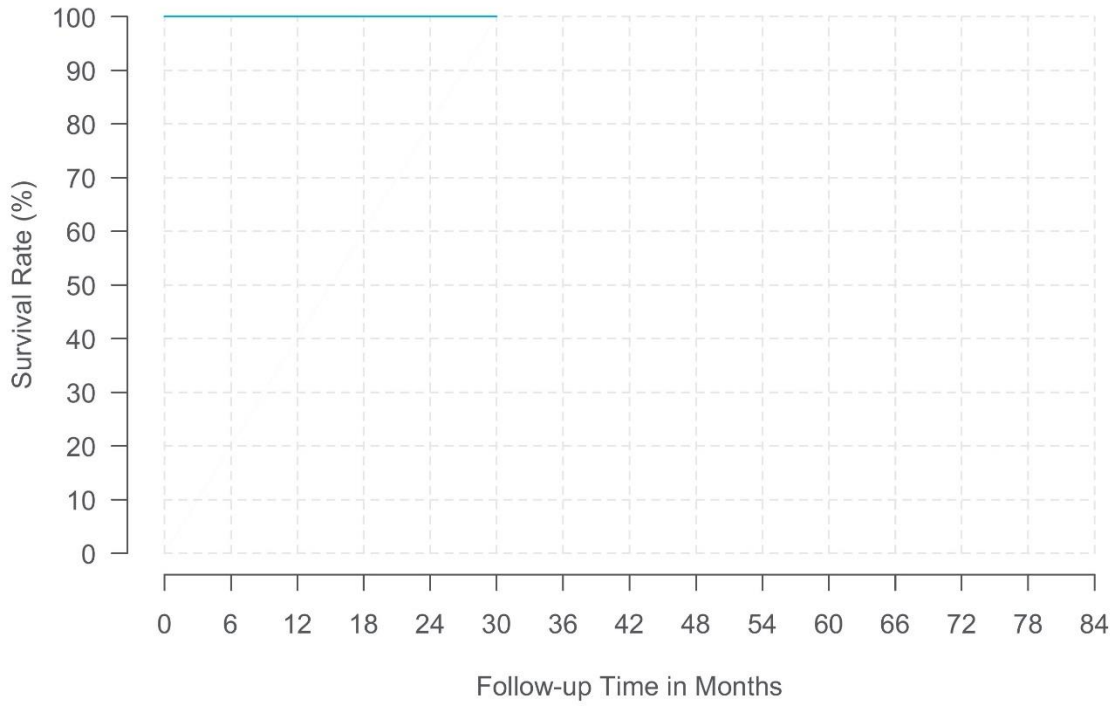
Time Interval	6 Years	7 Years	8 Years	At 99 Months
Survival (95% CI)	94.3% (92.0%, 96.0%)	94.3% (92.0%, 96.0%)	90.4% (82.8%, 94.7%)	90.4% (82.8%, 94.7%)
Sample Size	170	98	37	26

Specification: 3058	
Height	1.7 in (44 mm)
Width	2.0 in (51 mm)
Thickness	0.3 in (7.7 mm)
Volume	14 cc
Battery type	Non-Rechargeable
Expected Battery life	Depends on settings and use
Maximum Electrodes	4
Amplitude	0 - 8.5 V
Rate	2.1 - 130 Hz
Pulse Width	60 - 450 μsec
Programs	4
Implant Depth	≤ 2.5 cm

Neurostimulator Event Summary: 3058	N
High Impedance	17
Device Malfunction	6
Lead Migration/Dislodgement	5
Device Lead Issue	4
Premature Battery Depletion	3
Device Electrical Impedance Issue	2
Device Issue	2
Device Breakage	1
Device Failure	1
Device Overheating	1
Lead Fracture	1
Unspecified	1
Total	**44**

6.3.2.3 Model 97810

Model Name	InterStim Micro
FDA Approval Date	July 2020
Neurostimulators Enrolled	60
Neurostimulators Currently Active in Study	38
Initial Product Performance Events	0
Median Follow-up Time (Months)	25.8
Cumulative Follow-up Time (Months)	1,582



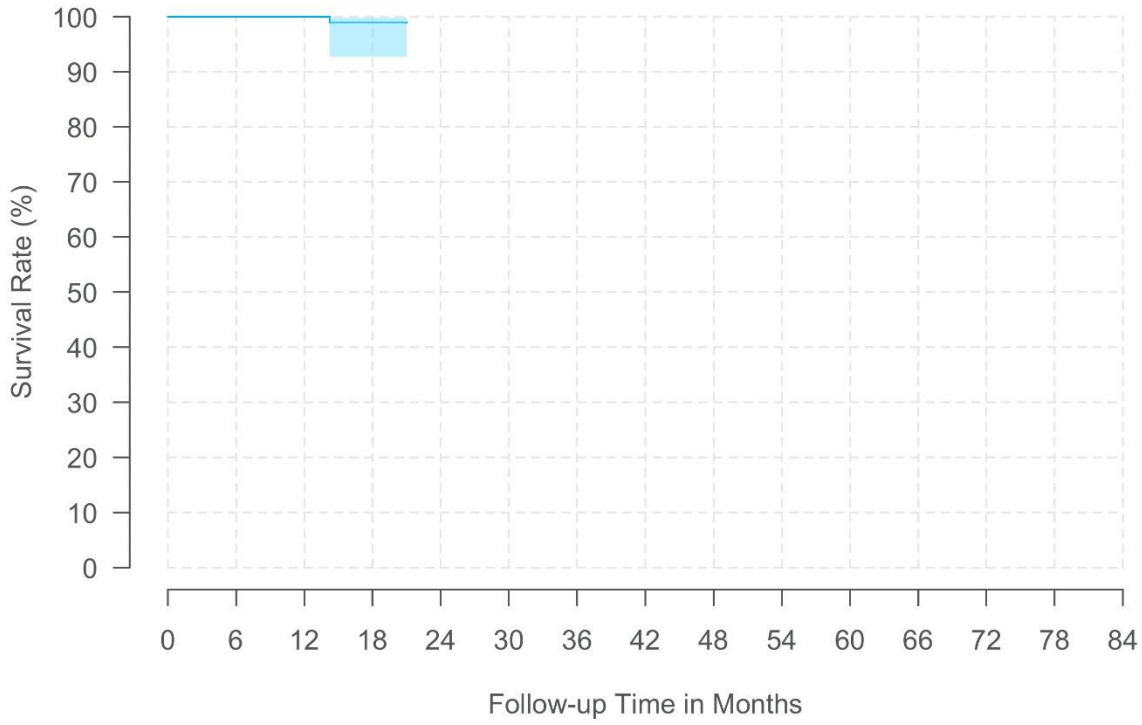
Time Interval	1 Year	2 Years	At 30 Months
Survival (95% CI)	100.0% (NA)	100.0% (NA)	100.0% (NA)
Sample Size	54	35	22

Specification: 97810	
Height	0.7 in (17 mm)
Length	1.9 in (47 mm)
Thickness	0.2 in (5 mm)
Volume	2.8 cc
Battery type	Rechargeable
Expected Battery life	15 years
Maximum Electrodes	1
Amplitude	0 to 12.5 mA (0.1 mA increment)
Rate	3 to 130 Hz
Pulse Width	40 to 450 µsec (10 µsec increment)
Programs	11
Implant Depth	≤ 2.5 cm

Neurostimulator Event Summary: 97810	Total
N	**0**

6.3.2.4 Model 97800

Model Name	InterStim X
FDA Approval Date	February 2022
Neurostimulators Enrolled	282
Neurostimulators Currently Active in Study	258
Initial Product Performance Events	2
Median Follow-up Time (Months)	10.0
Cumulative Follow-up Time (Months)	2,947



Time Interval	1 Year	At 21 Months
Survival (95% CI)	100.0% (NA)	98.9% (92.7%, 99.9%)
Sample Size	125	33

Specification: 97800	
Height	1.7 in (44 mm)
Length	2.0 in (51 mm)
Thickness	0.3 in (7.7 mm)
Volume	12.5 cc
Battery type	Recharge-free
Expected Battery life	10.2 years[a]
Maximum Electrodes	4
Amplitude	0 - 12.5 mA (0.1 mA increment)
Rate	3 - 130 Hz
Pulse Width	40 - 450 µsec (10 µsec increment)
Programs	Up to 7 standard programs (Programs 1-7) and up to 4 custom programs (Programs A-D)
Implant Depth	No deeper than 2.5 cm (1 in) below the skin

[a]Service life may be up to 15 years depending on device settings and patient impedance. See System Eligibility, Battery Longevity, Specifications (available at manuals.medtronic.com; manual document number M988757A016) for details about the impact of programming parameters and patient impedance on battery longevity.

6.4 Leads

From April 2010 to the report cut-off date of October 31, 2024 there were 1,768 leads followed in the registry. The difference between the total number of leads (n=1,768) versus the total number of neurostimulators (n=1,859) is due to the fact that some patients were subsequently re-implanted with a new neurostimulator. The aggregate prospective follow- up time for all leads was 63,407 months (5,284 years). Table 6.10 provides the number and percentage of leads by model.

Table 6.10: Sacral Neuromodulation Lead Counts by Model

Model Name	N (%)
Currently manufactured	**450 (25.4%)**
InterStim SureScan MRI (model 978B1)	379 (21.4%)
InterStim SureScan MRI (model 978A1)	71 (4.0%)
No longer manufactured	**1306 (73.9%)**
InterStim Quad Tined (model 3889)	1201 (67.9%)
InterStim Extended Electrode Quad Tined (model 3093)	100 (5.7%)
InterStim Quad (model 3080)	3 (0.2%)
InterStim Extended Electrode Quad (model 3092)	2 (0.1%)
Other/Unspecified	**12 (0.7%)**
Total	**1768 (100.0%)**

6.4.1 Lead Events

There were 174 product performance-related events with an underlying reported etiology related to lead function. This includes 170 events with a lead etiology and 4 events with both a lead and other etiology (including device and non-device etiologies). Of these, 134 were the initial product performance event that affected lead survival estimates.

For the purposes of survival analysis, a device's follow-up time is cut off for one of three reasons: 1) the occurrence of a product performance-related event; 2) the occurrence of a censoring event; or 3) the device is event-free and censored at the patient's last follow-up prior to the data cut-off. For leads:

- 134 had follow-up time cut-off due to product performance-related events.

- 1045 were censored in the survival analysis for the following reasons: patient expired, lead explanted, patient discontinued, therapy suspended, or site discontinued participation in the registry.
- 589 were free from product performance-related events and censoring events, and were censored at the last follow-up visit prior to the report cut-off.

6.4.2 Lead Models

The following figures and tables represent lead survival and 95% confidence intervals where at least 20 leads contributed to each 3-month interval.

6.4.2.1 Model 3093

Model Name	InterStim Extended Electrode Quad Lead Tined
FDA Approval Date	September 2002
Leads Enrolled	100
Leads Currently Active in Study	12
Initial Product Performance Events	12
Median Follow-up Time (Months)	31.5

6.5 Extensions

From April 2010 to the report cut-off date of October 31, 2024, there were 151 extensions followed in the registry, of which 67.5% were Model 3095 (102/151). The difference between the total number of extensions (n=151) versus the total number of neurostimulators (n=1,859) is due to the fact that not all systems require an extension, or some patients were subsequently re-implanted with a new neurostimulator. The aggregate prospective follow- up time for all extensions was 4,740 months (395 years).

6.5.1 Extension Events

There were 2 product performance-related events with an underlying reported etiology related to extension function. Of these, 1 was the initial product performance event that affected extension survival estimates.

For the purposes of survival analysis, a device's follow-up time is cut off for one of three reasons: 1) the occurrence of a product performance-related event; 2) the occurrence of a censoring event; or 3) the device is event-free and censored at the patient's last follow-up prior to the data cut-off. For extensions:

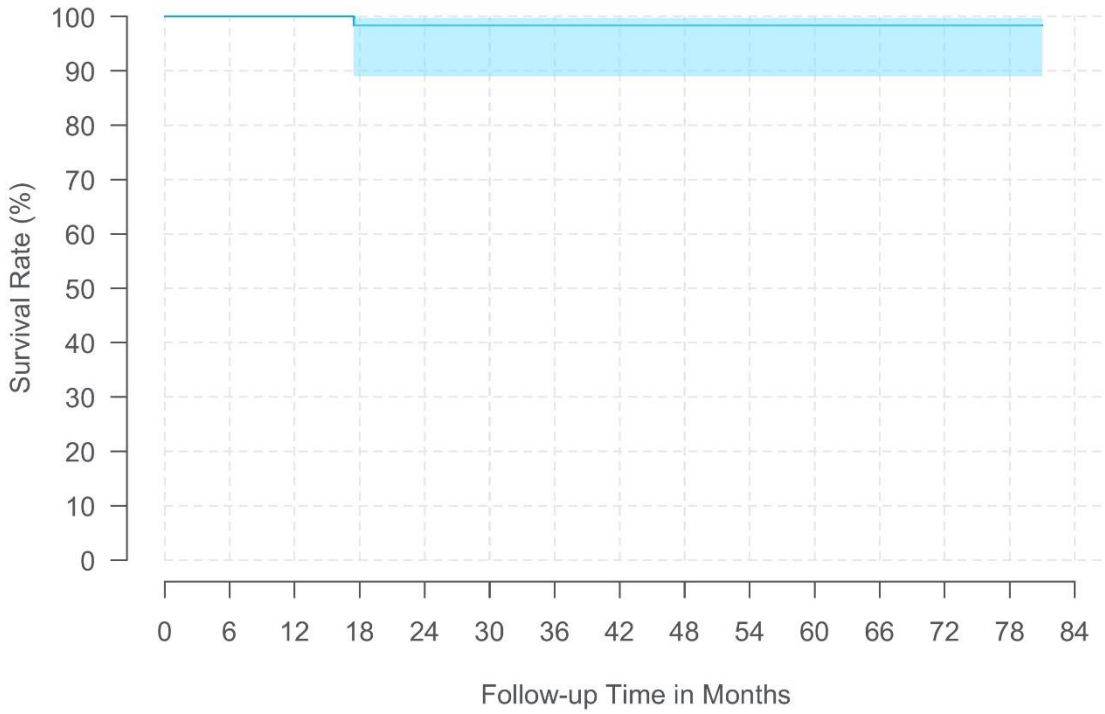
- 1 had follow-up time cut-off due to a product performance-related event.
- 96 were censored in the survival analysis for the following reasons: patient expired, extension explanted, patient discontinued, therapy suspended, or site discontinued participation in the registry.
- 54 were free from product performance-related events and censoring events, and were censored at the last follow-up visit prior to the report cut-off.

6.5.2 Extension Models

The following figures and tables represent extension survival and 95% confidence intervals where at least 20 extensions contributed to each 3-month interval.

6.4.2.5 Model 3095

Model Name	Quadripolar Extension
FDA Approval Date	July 1998
Extensions Enrolled	102
Extensions Currently Active in Study	7
Initial Product Performance Events	1
Median Follow-up Time (Months)	28.6
Cumulative Follow-up Time (Months)	4,362



Time Interval	1 Year	2 Years	3 Years	4 Years	5 Years
